

Area sample

4x4
(9)

2x2
(5)

1x1
(9)

0,5x0,5
(16)

0.5x0.5

1. Medicago small
2. **Ornitogalum**
3. **Viola purple-white**
4. Lusula hairs
5. **Trifolium with hairs**
6. Trifolium knife-leaves
7. Trifolium nerviatum
8. **Festuca**
9. **Plantago**
10. Spiga
11. Longitudinal sheath
12. Dry balls without leaves
13. Weed with one stripe
14. Multimini leaves
15. **Christmas tree**
16. Geranium

***Plantago
media***

Trifolium alpestre

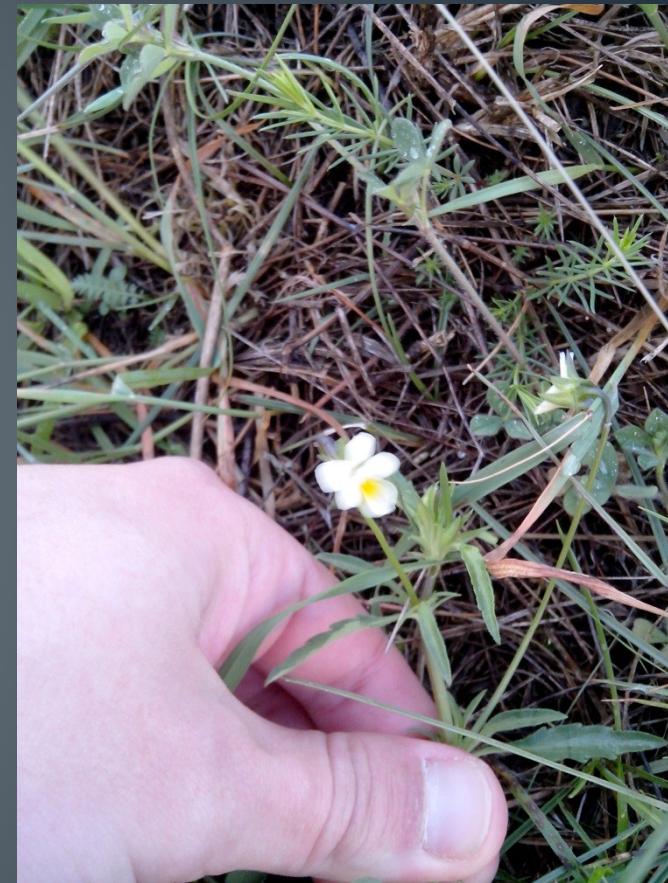

***Festuca cf.
ovina***

*Galium
verum*

Ornithogalum cf. kochii

Viola arvensis

1x1

1. **Feather plumero** (cleaning object)
2. Purple capullo
3. Heart leaf
4. **Two by two blue micro flower**
5. **Centaurea**
6. **Rumex**
7. **Dianthus**
8. Big parallel nerves
9. Big central nerve irregularly

Koeleria macrantha

Dianthus carthusianorum

Myosotis cf. stricta

Rumex acetosella

2x2

1. Espiga, white things in leaves
2. Fiuncho-like
3. **Purple flower**
4. Big leaves
5. Leaf with little spots and hairs

Dianthus carthusianorum

4x4

1. **Ranunculus bulbosus**
2. Suculenta
3. **Umbelata**
4. **Pseudo-taraxacum**
5. Escobilla
6. **Fea asquerosa («ugly») with thorns**
7. **Similar to «ugly» without thorns**
8. Terciopelo leaf
9. Surrounding the petiole

Achillea millefolium

*Ranunculus
bulbosus*

Hieracium pilosella

*Centaurea
rhenana*

*Chondrilla
juncea*

$$S_n = A^{ac}$$

S_n : number of species

A : area

a : distance from continent to island

c : slope

We didn't use "a", distance from the continent to island, because our sample is not consider an island and is in contact with the rest of the land.

$$\log S_n = \log A * c$$

$$c = 1,321351$$
