PLANTS MAKE US HAPPY

People at work who can see plants report significantly greater job satisfaction than those who can't.

Dravigne, A., Waliczek, T.M., Lineberger, R.D., Zajicek, J.M. (2008) The effect of live plants and window views of green spaces on employee perceptions of job satisfaction. HortScience 43: 183–187. Photo credit: tom donald

Cells were first observed in plants.

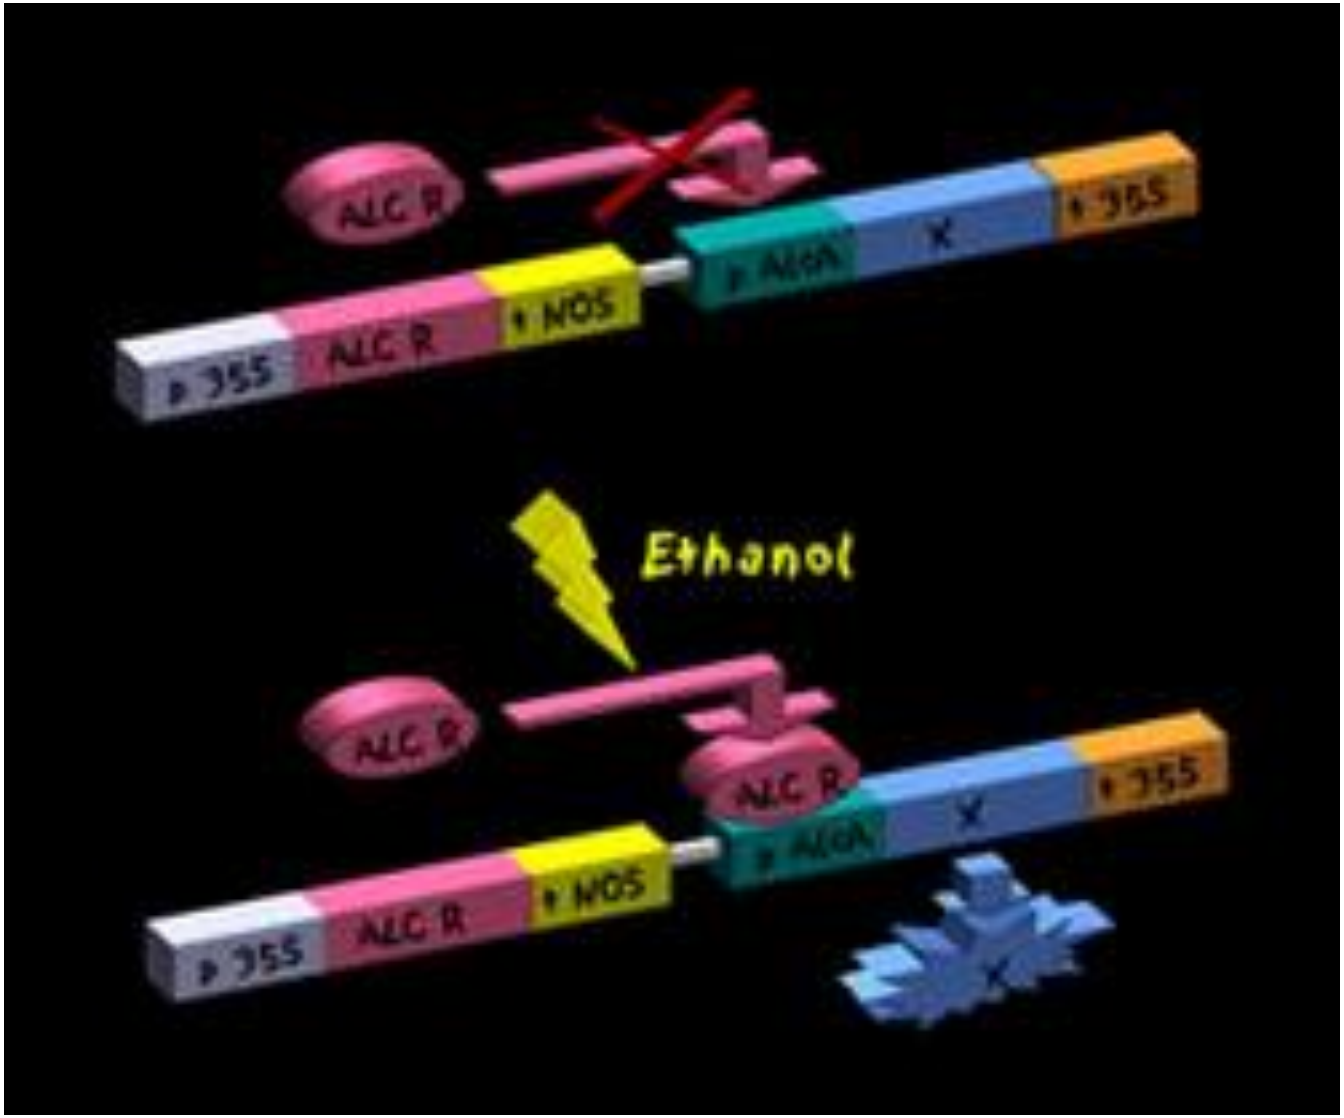
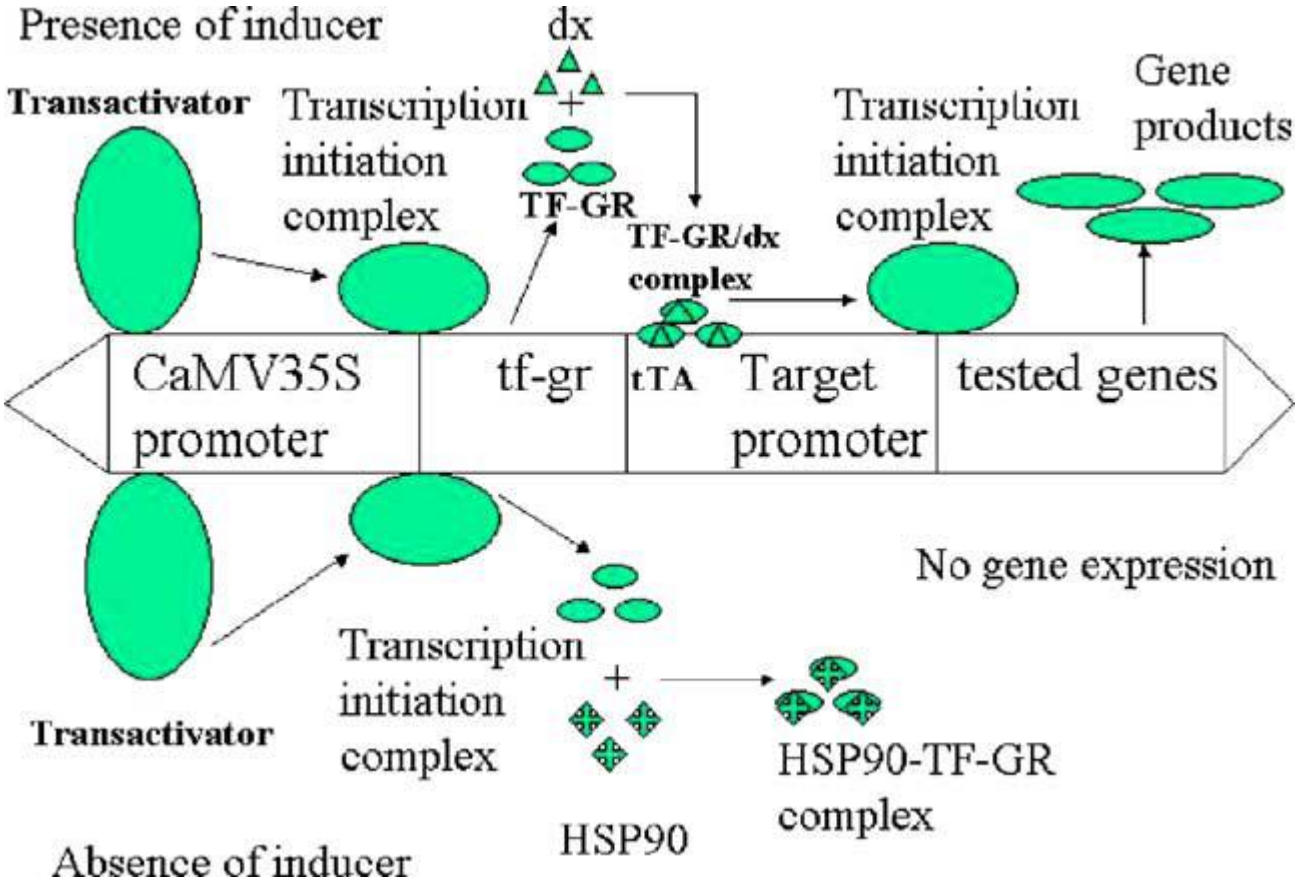
gene of interest

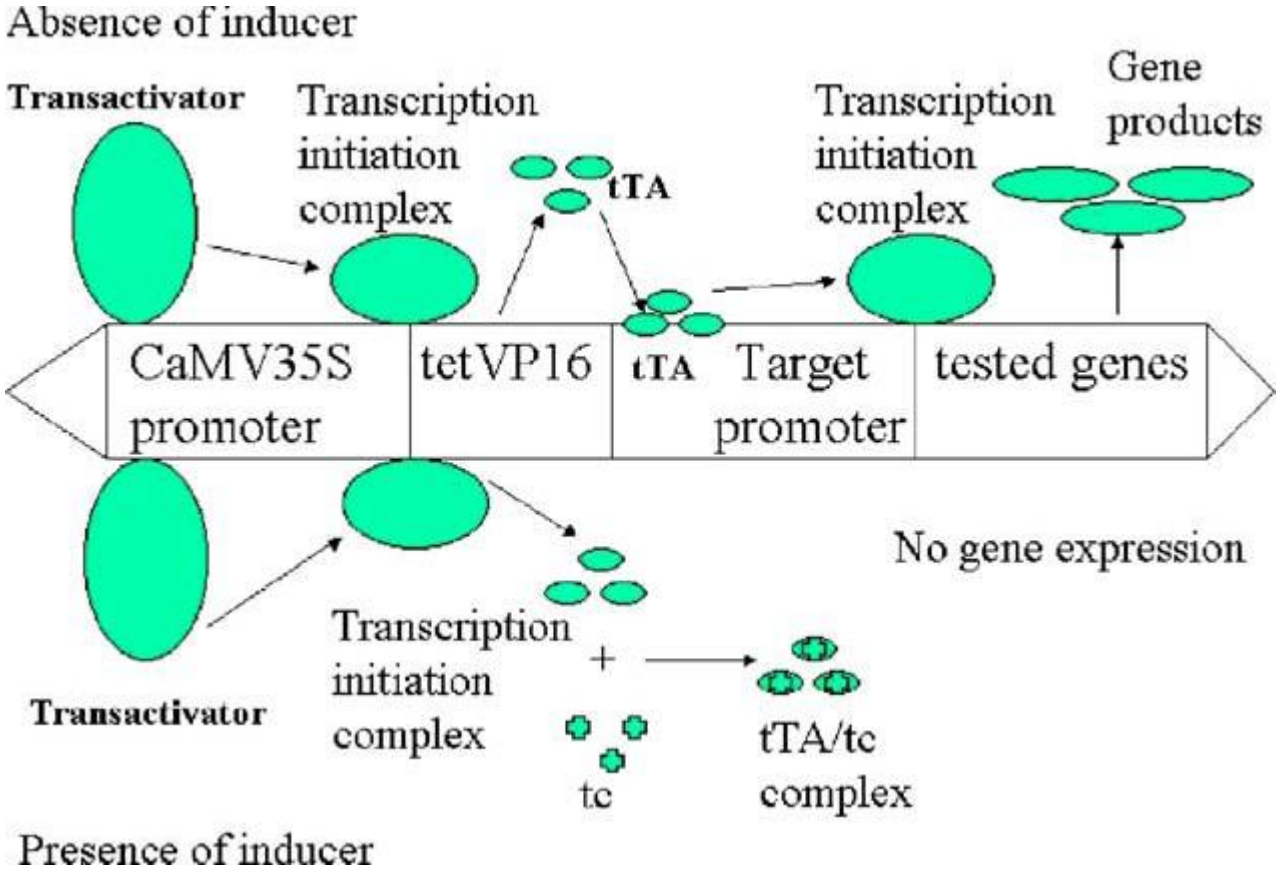
Ethanol inducible expression



The dexamethasone-inducible promoter activating system



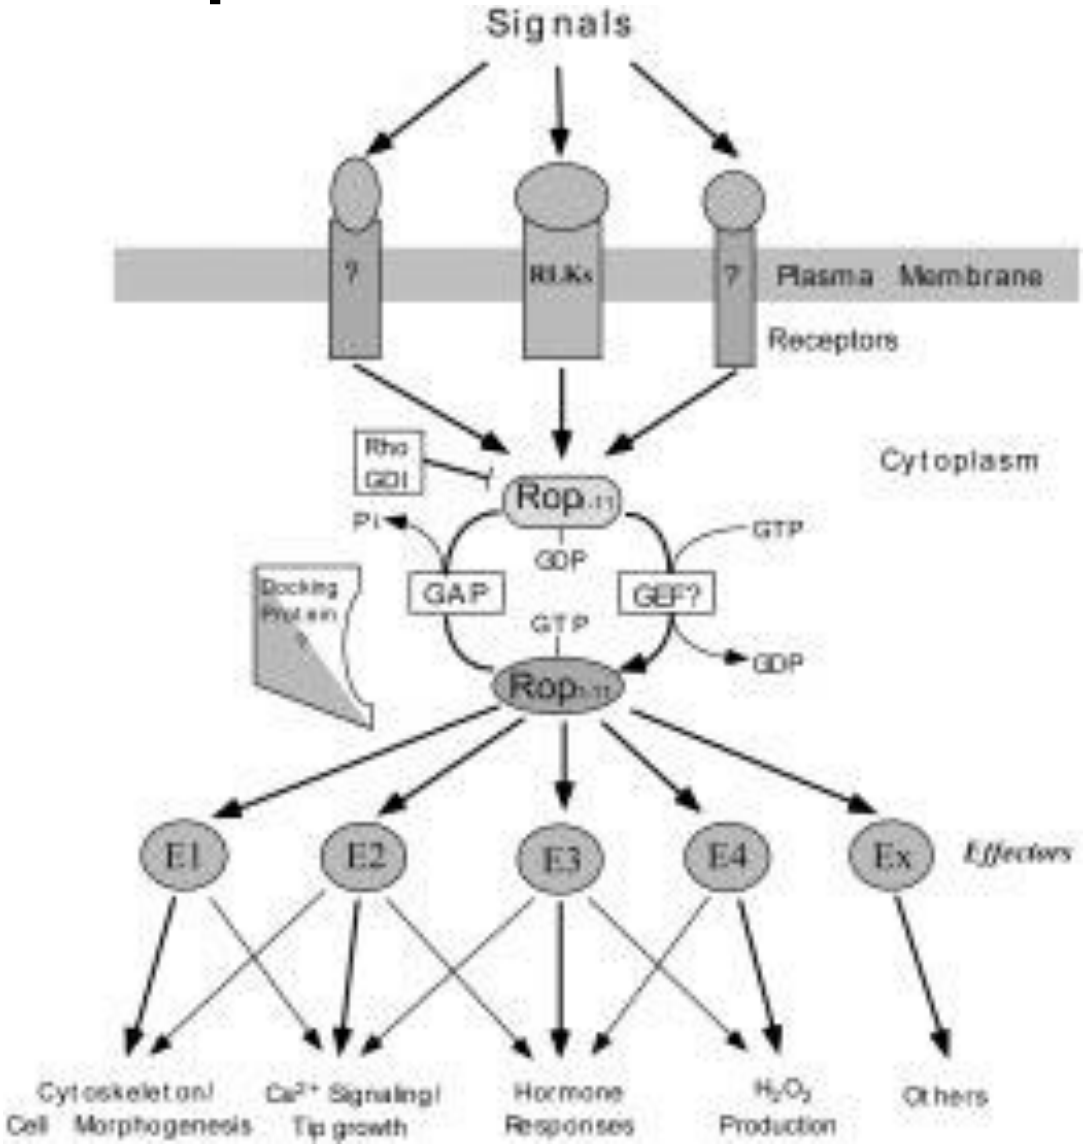
The tetracycline-inducible promoter inactivation system



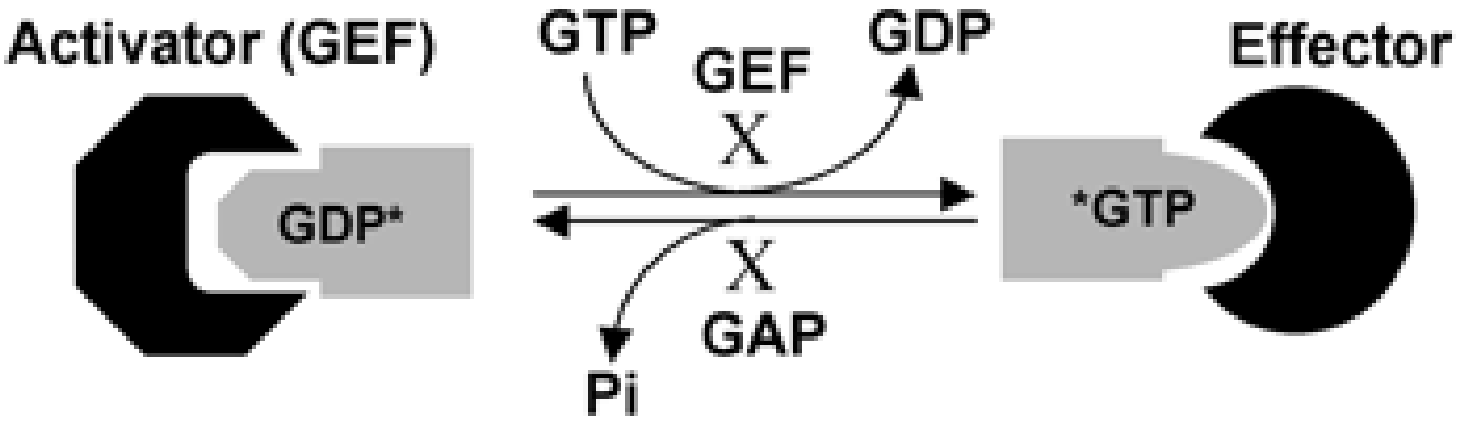
Sequence manipulation

- Site-directed mutagenesis (phosporylation sites, activity of protein domains, catalytic center)
- Domain deletions and swaps
- Chimeric proteins

rop GTPases mutants



rop GTPases mutants



DN-rop mutants

- Permanently bind GDP or nucleotide-free
- Sequester activator (GEF) when overexpressed
- Examples:
  - ROP1/ROP2/ROP4/ROP6: T20N, A121D
  - ROP5: T20N

CA-rop mutants

- Permanently bind GTP
- Insensitive to GAP
- Constitutively activate effectors when expressed in cells
- Examples:
  - ROP1/ROP2/ROP4/ROP6: G15V or Q64L
  - ROP5: G15V or Q64E

AUX/IAA and ARF proteins

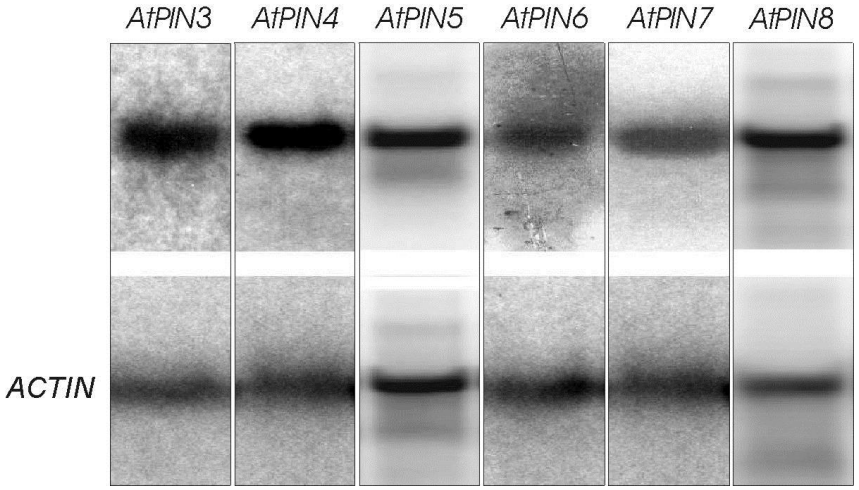
- Reporter genes
- In situ mRNA hybridization
- In situ protein localization
- In situ protein activity detection

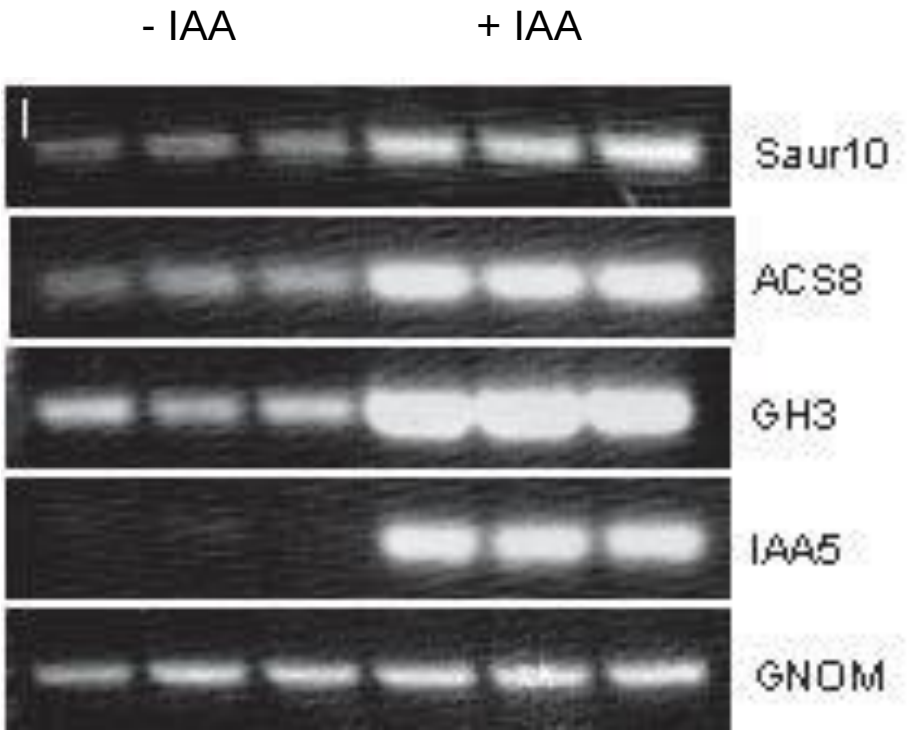
Blots and RT-PCR

Northern blots

Figure 8. Expression of *AtPIN* genes.
Northern blot and RT PCR analysis of *AtPIN3* - *AtPIN8* genes. *AtPIN3* transcript was found in stem, *AtPIN4*, *AtPIN6* and *AtPIN7* in root and *AtPIN5* and *AtPIN8* in seedling.
In the second line *ACTIN* signal is depicted.



RT-PCR

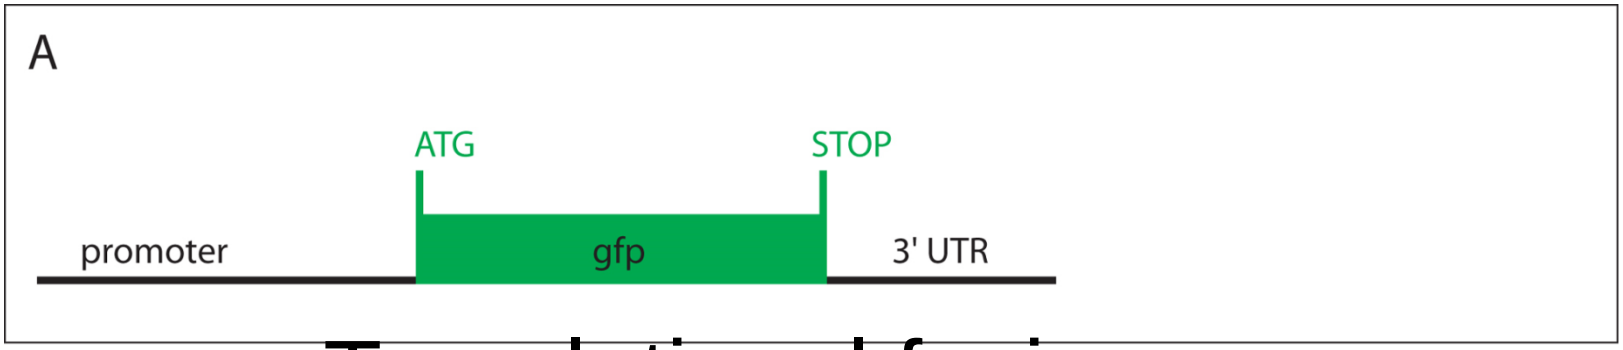


Western blots

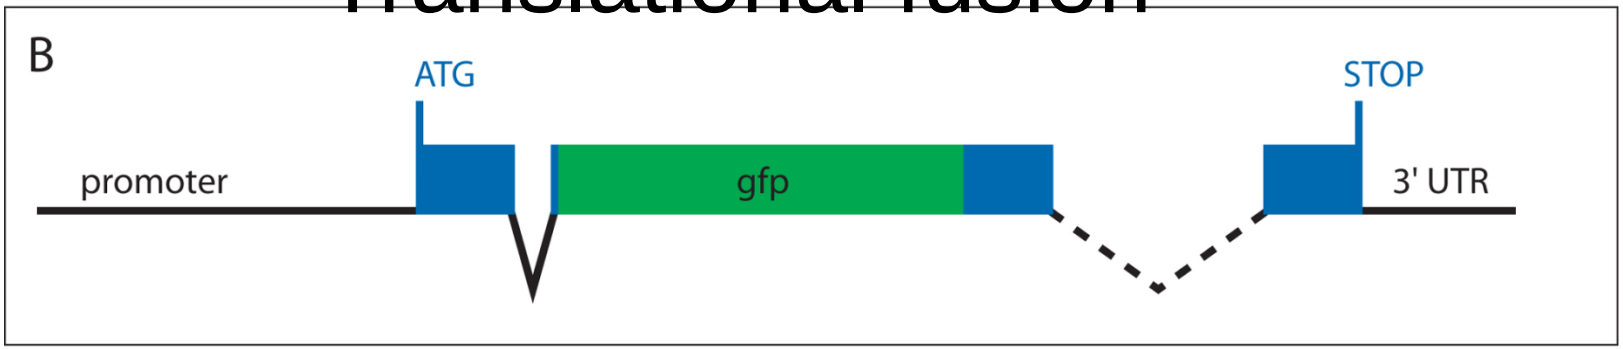
Reporter genes

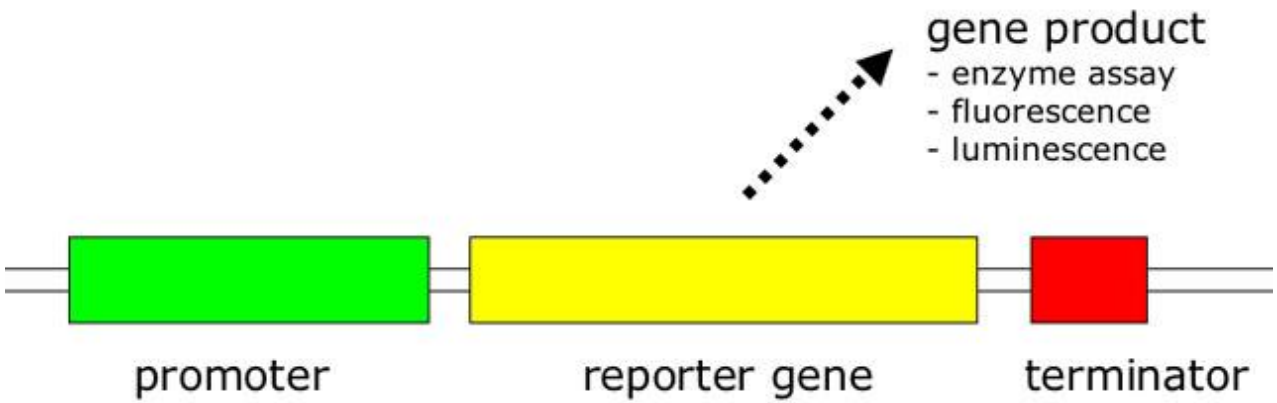
- Transcriptional fusions
- Translational fusions
- GUS, Luciferase, GFP
- Applications

Transcriptional fusion



Translational fusion





Reporter genes: markers for gene expression

ß-glucuronidase
green fluorescent protein
luciferase

GUS – ß-Glucuronidase

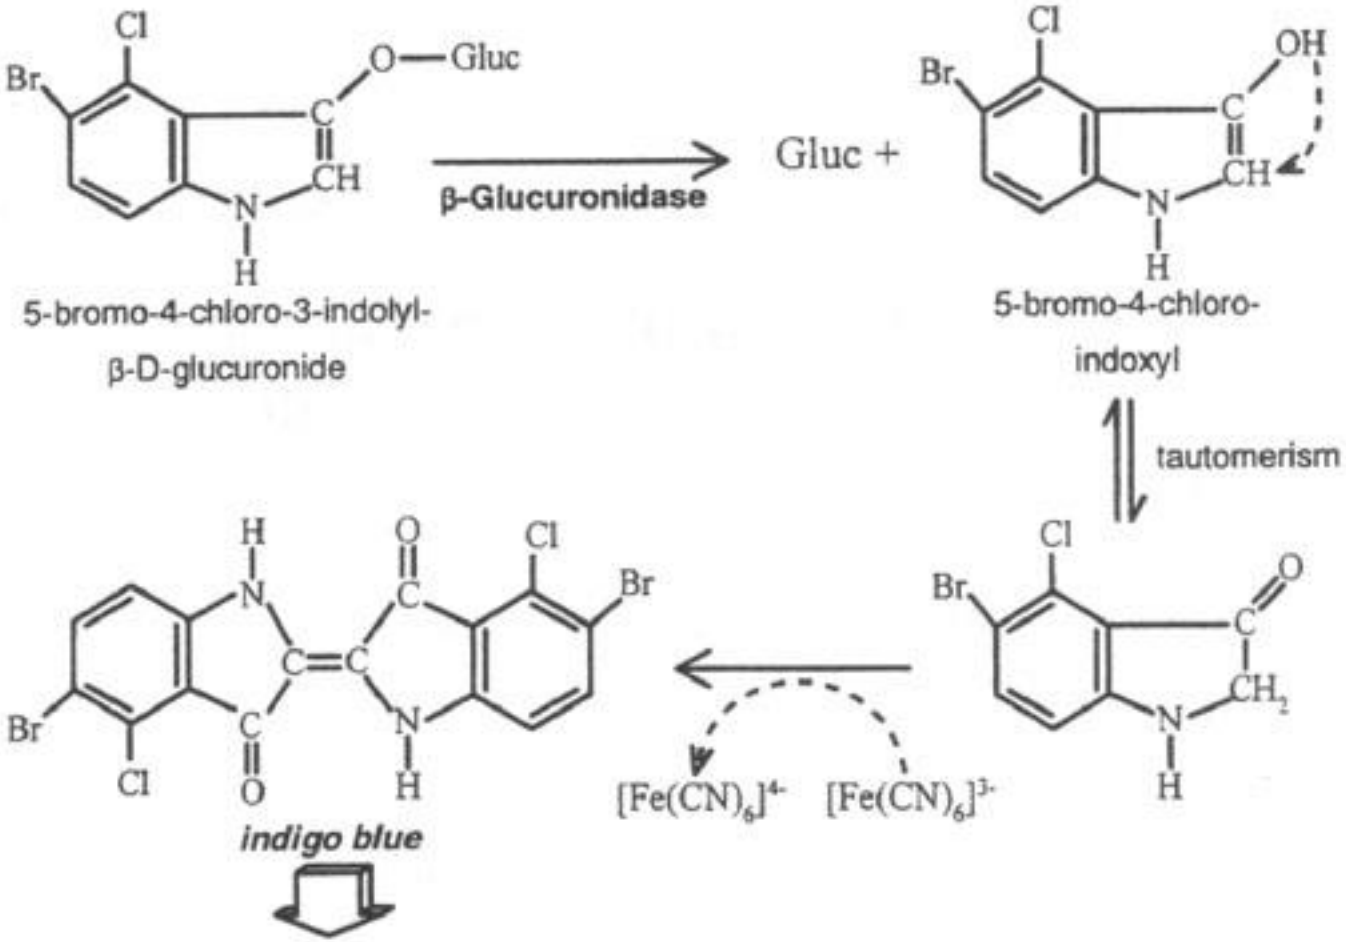


Fig. 1. Chemistry of X-Gluc reaction. Hydrolyzation of X-Gluc by the β-glucuronidase enzyme results in a reactive indoxyl molecule. Two indoxyl molecules are oxidized to indigo blue; ferri(III)cyanide enhances the dimerization.

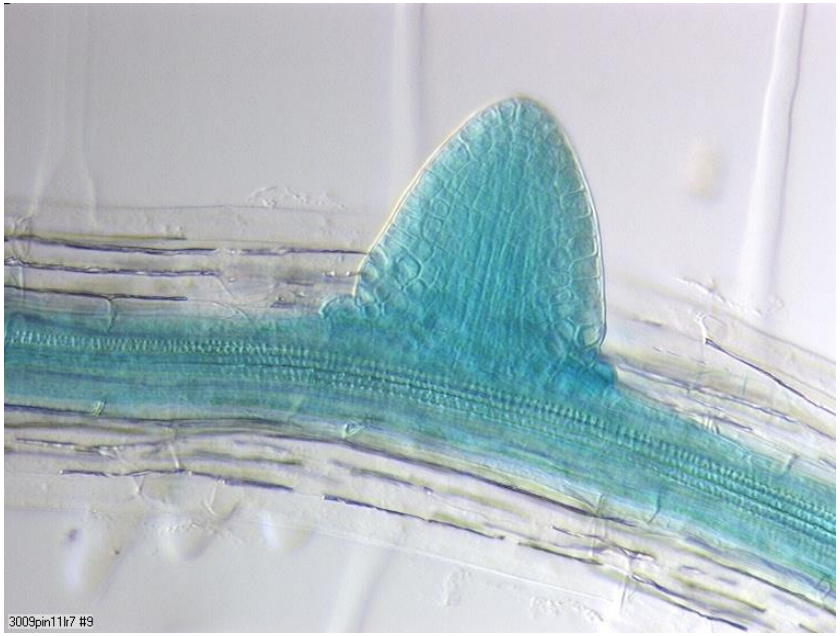
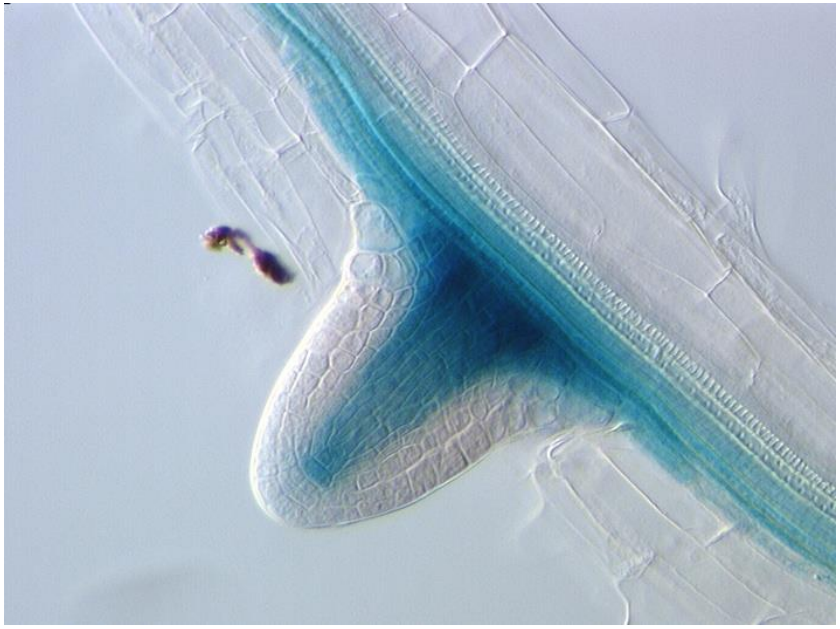
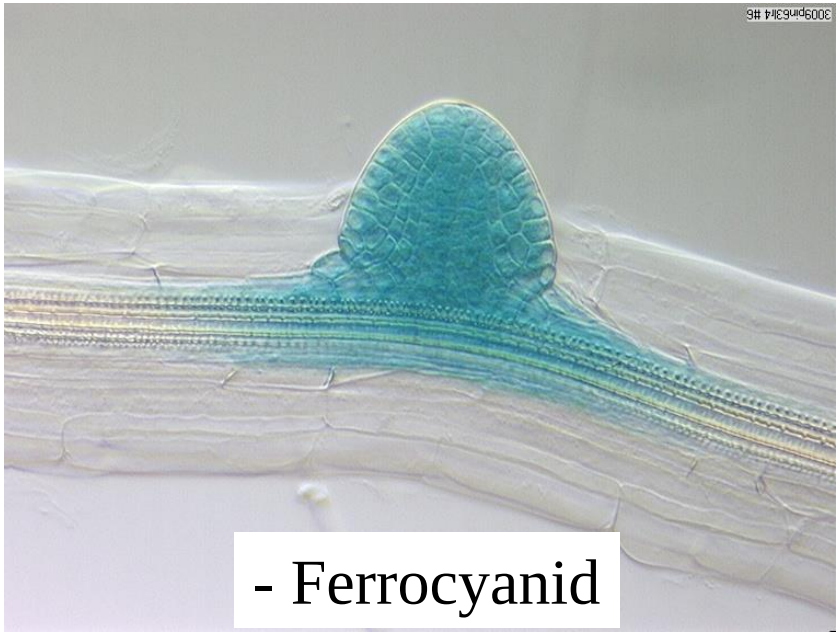
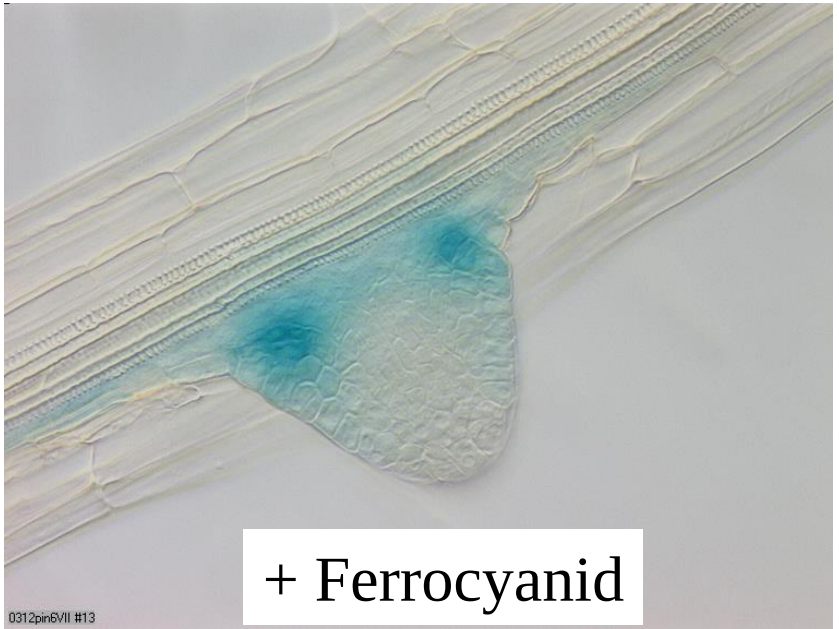
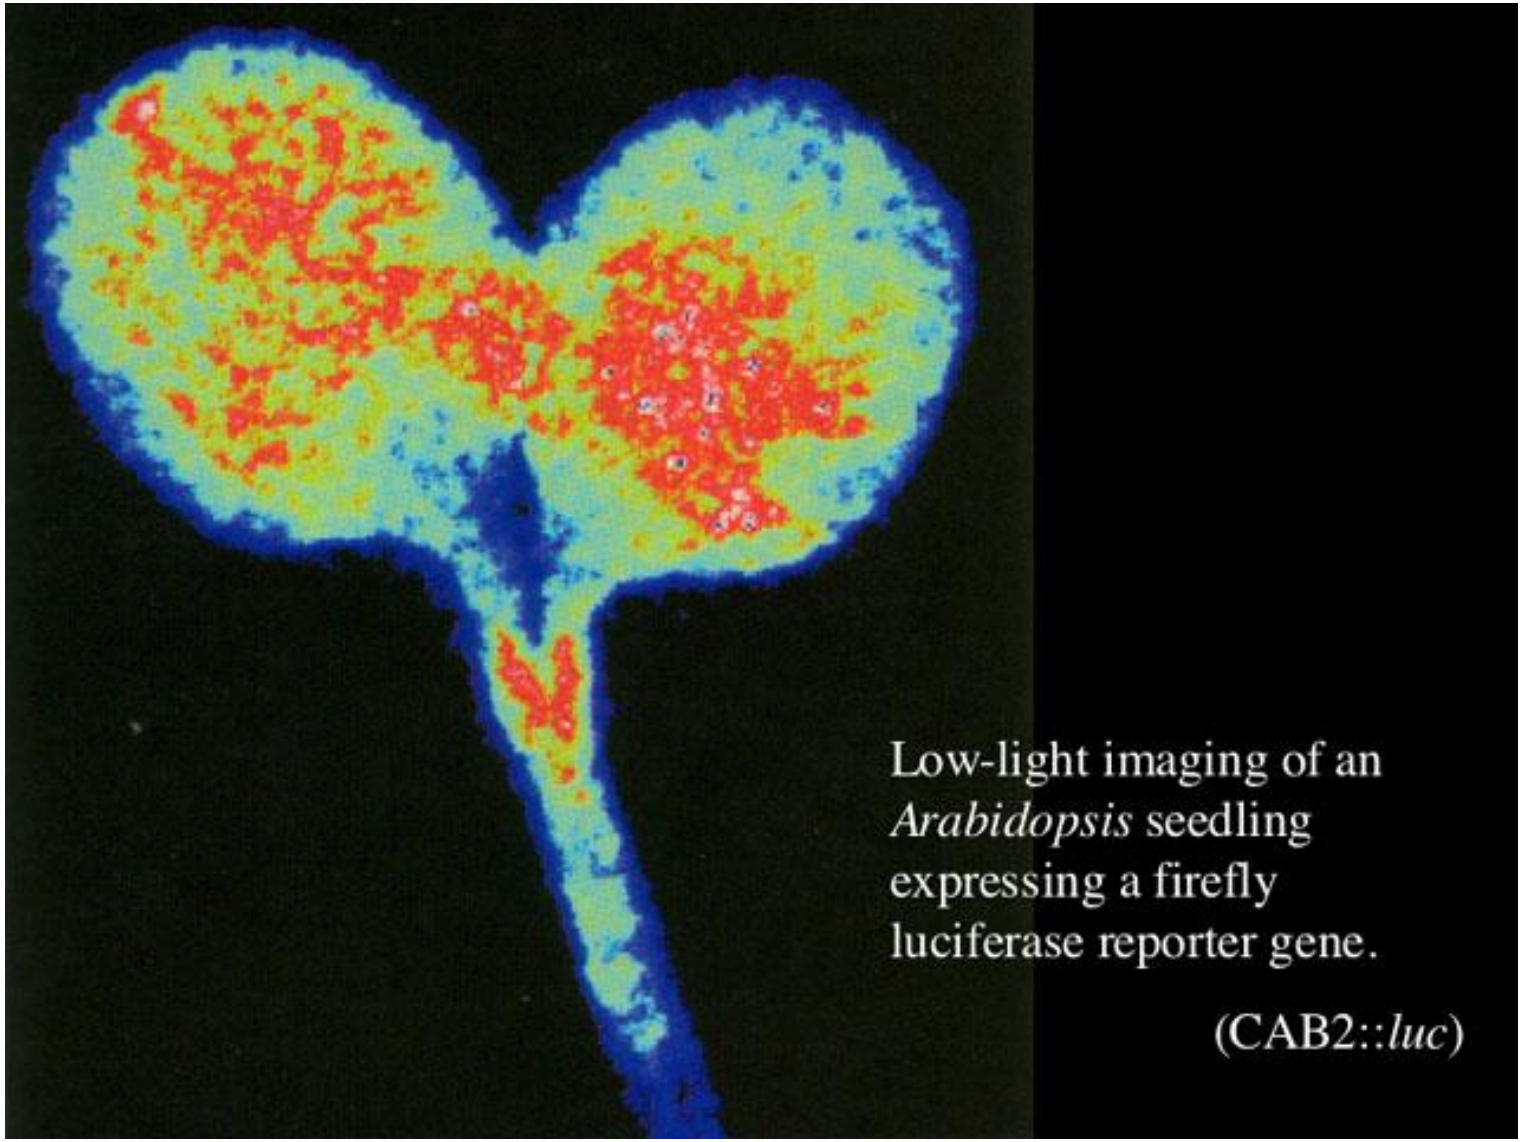
GUS – ß-Glucuronidase











luciferin + O_2 → oxyluciferin + light

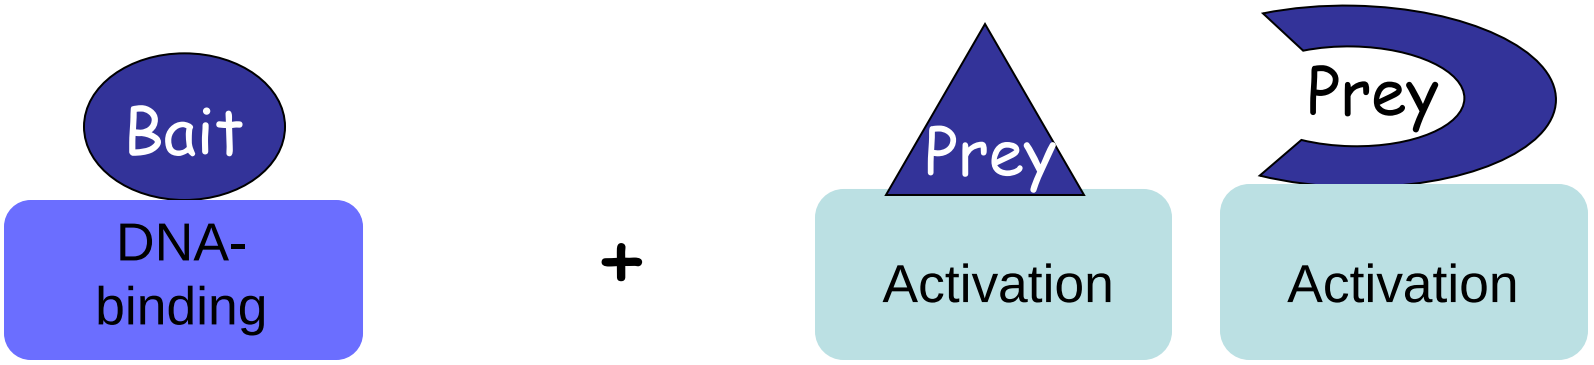
Yeast two hybrid

Classical transcription factor

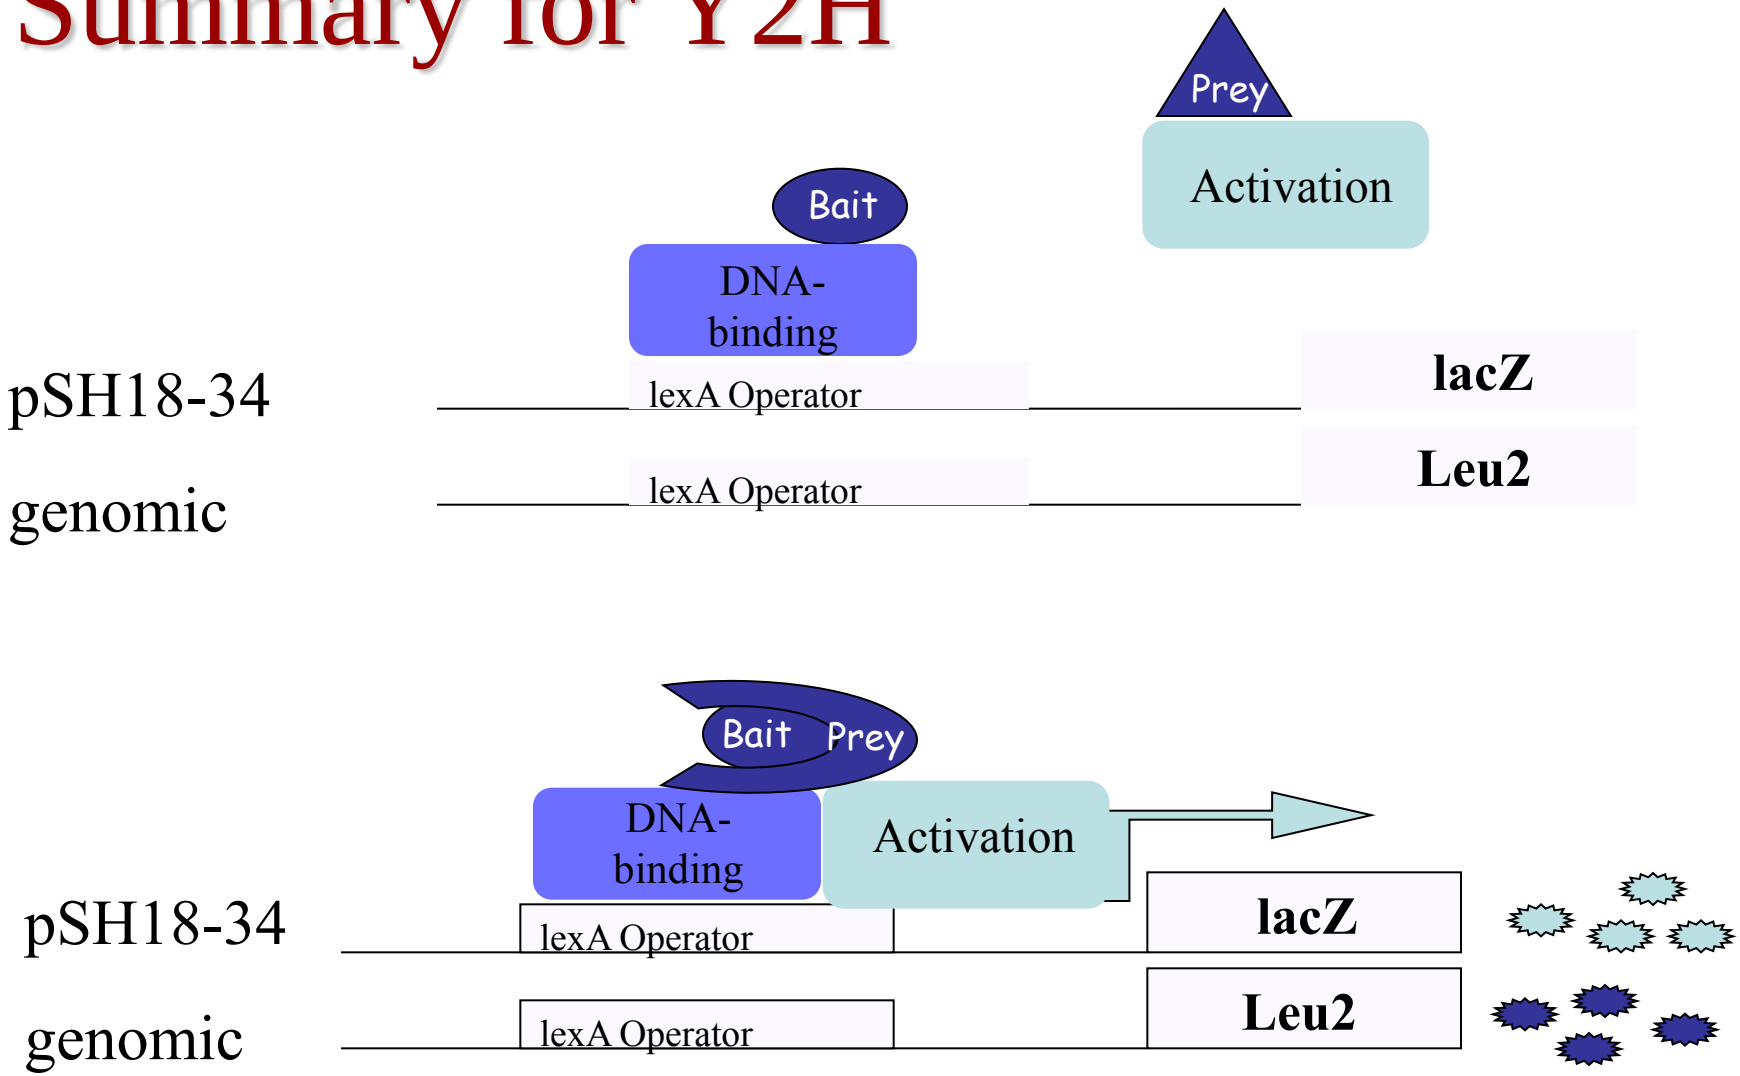
1. DNA Binding domain
2. Activation domain

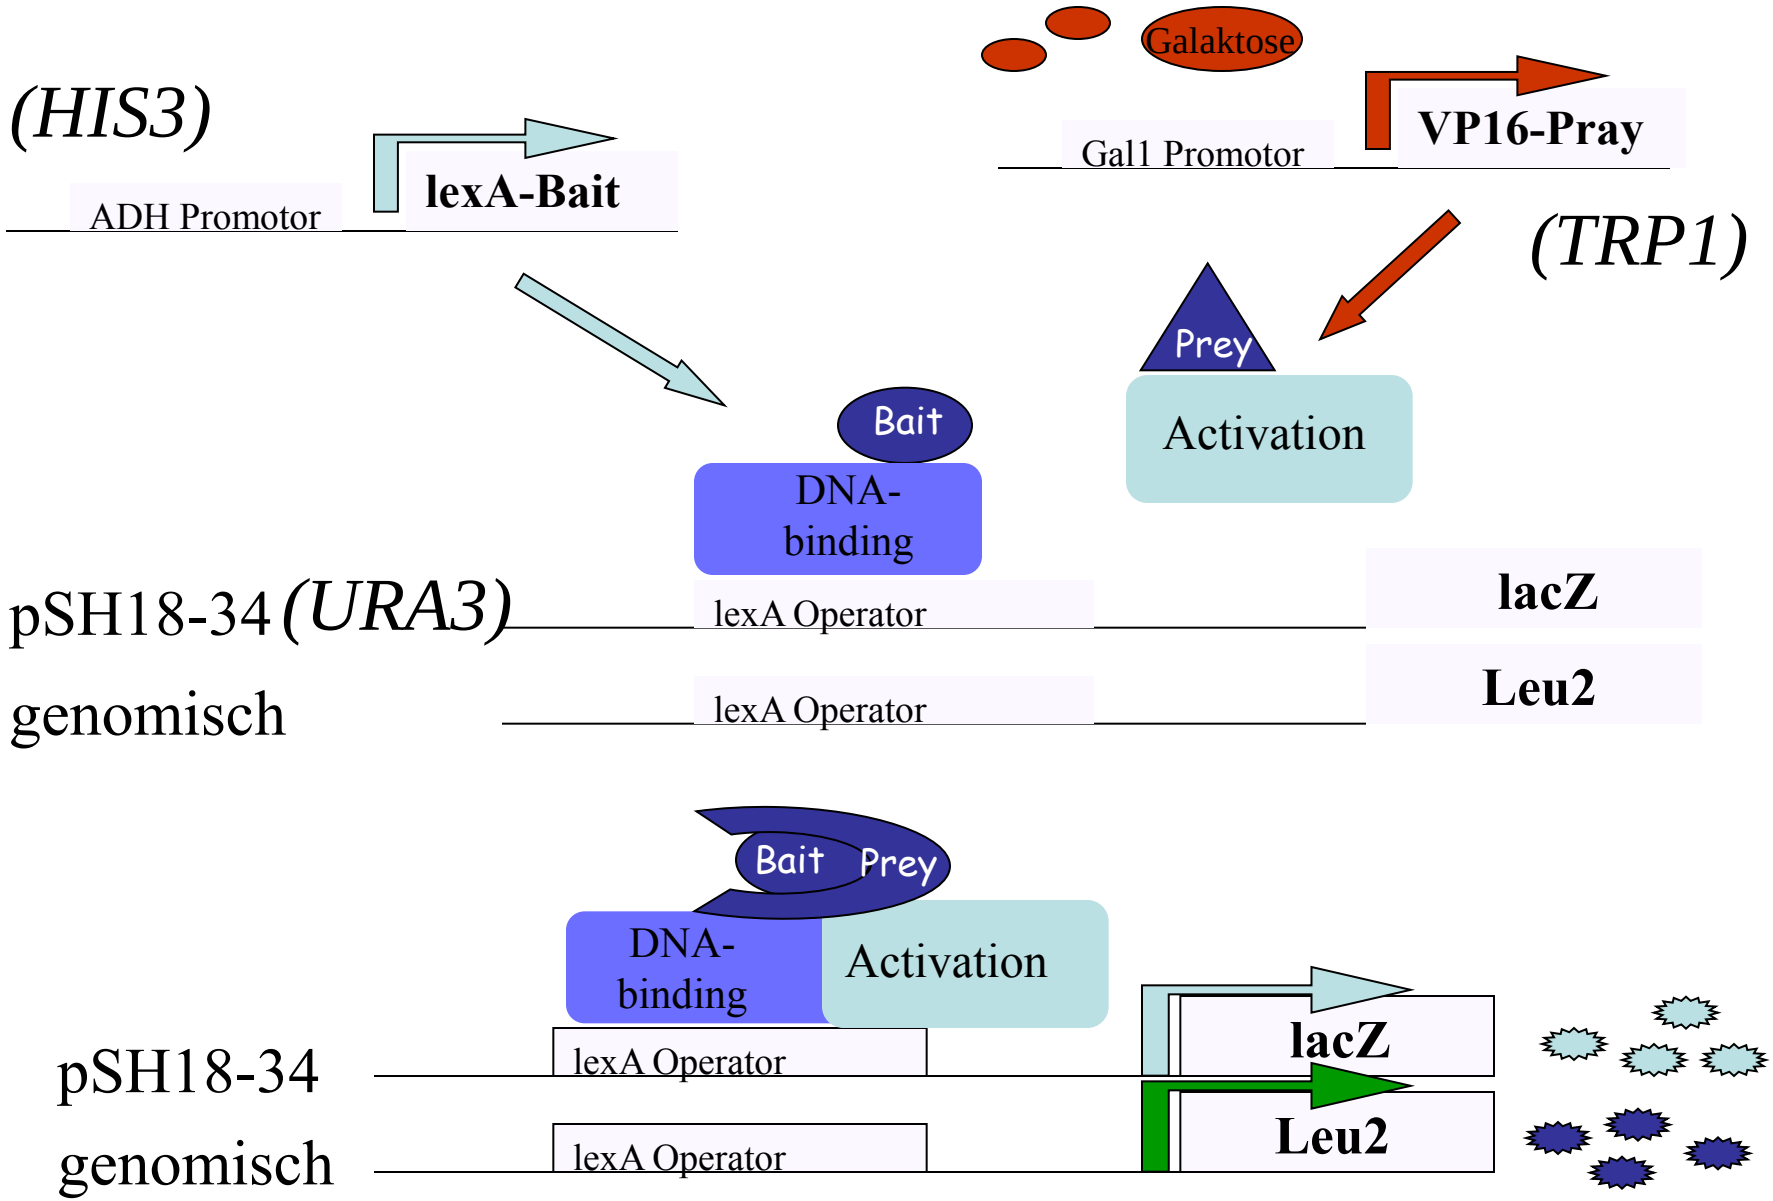


lexA Protein

VP16 Protein

Summary for Y2H





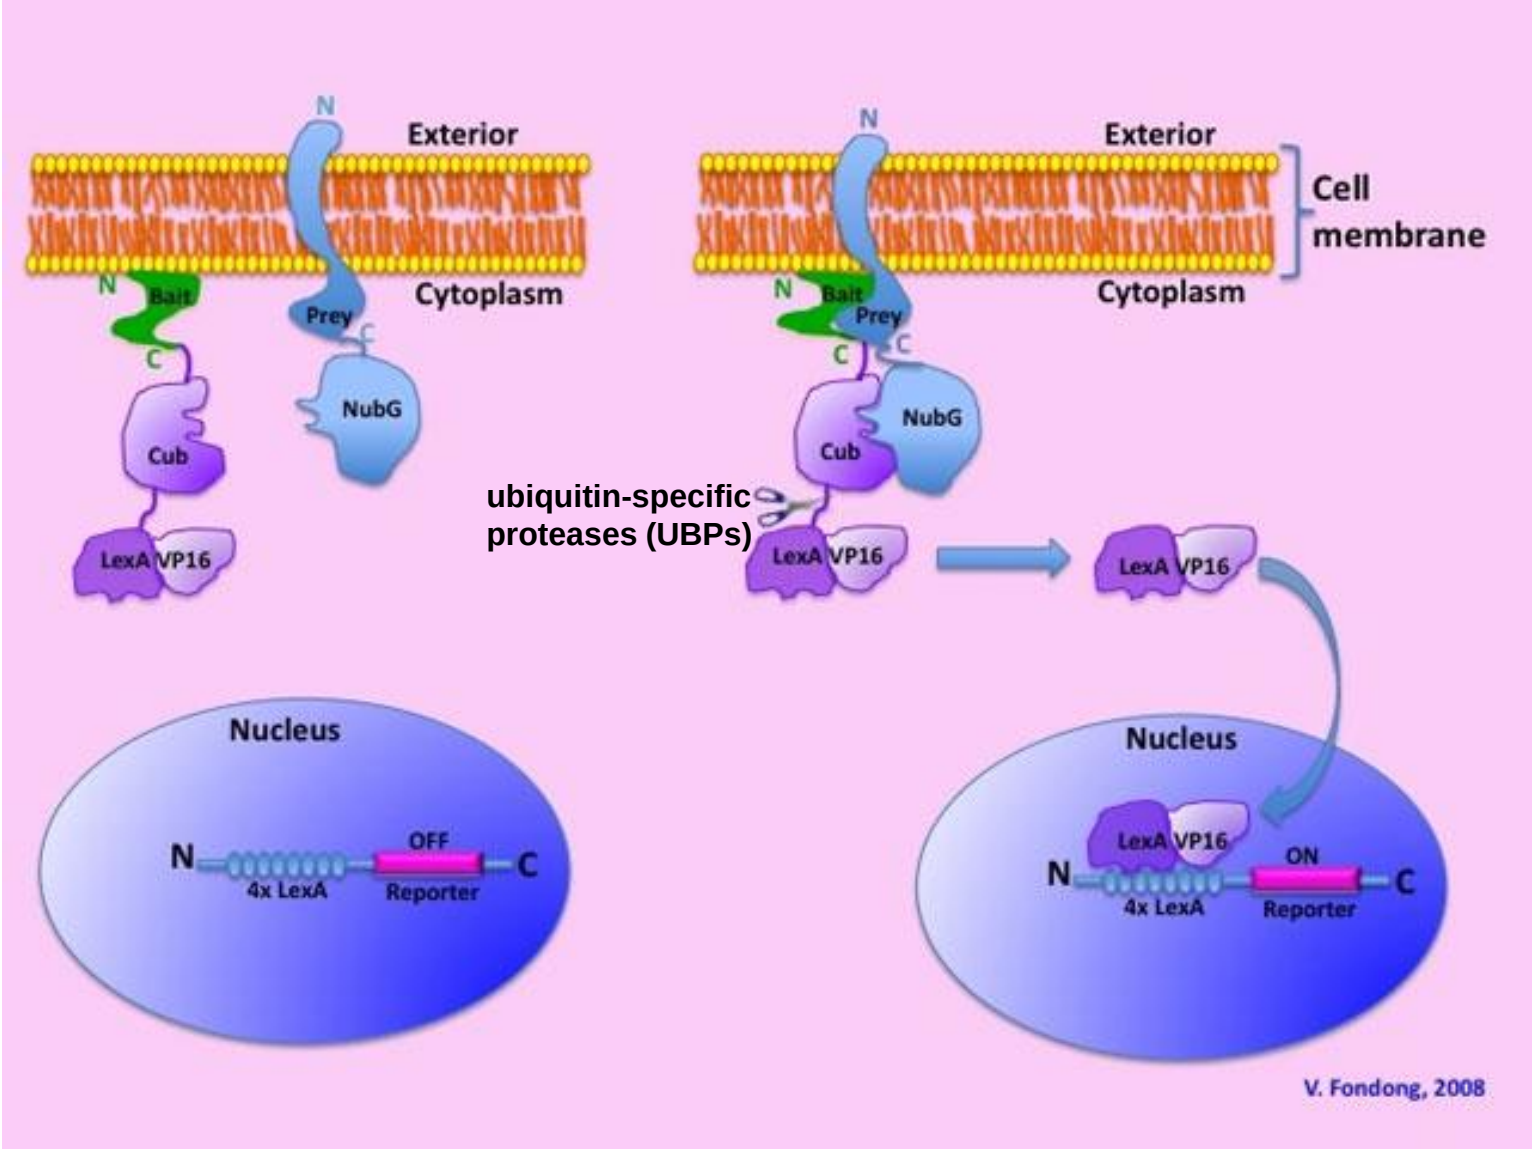
EGY48: Mutant for *HIS3, TRP1, URA3* und *LEU2*

Conditions for Y2H-System

1. Proteins must be able to localize to the nucleus

2. Bait construct must not have its own activation domain (Autoactivation)

Split-Ubiquitin



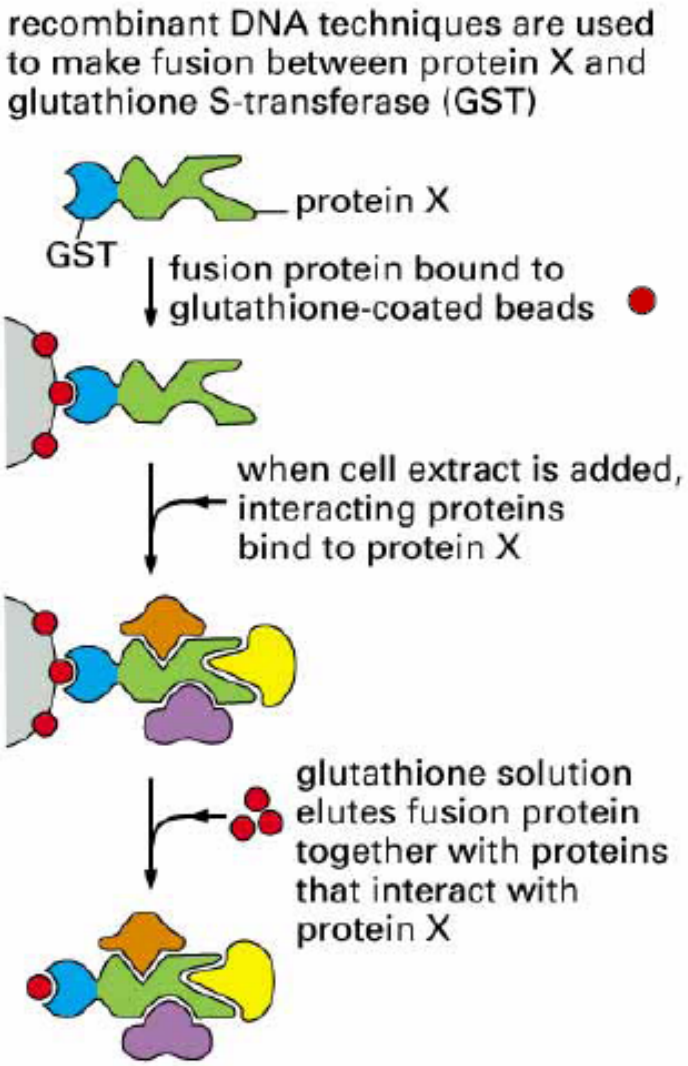


Figure 8–50. Molecular Biology of the Cell, 4th Edition.

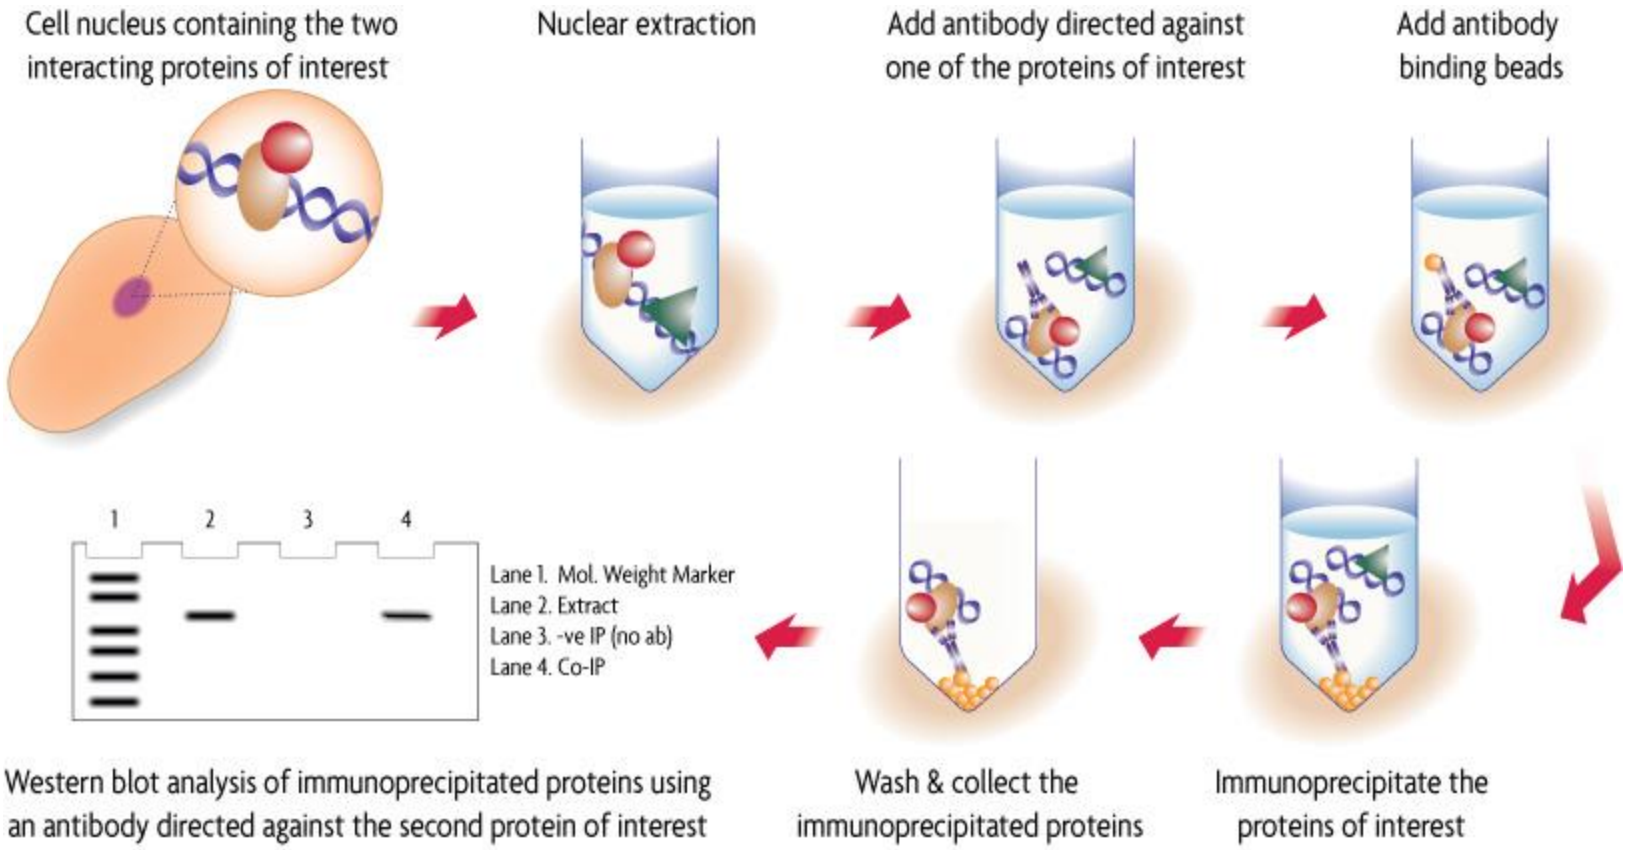
GST "pull downs"

- GST protein is usually expressed in E. coli as microgram quantities are used in typical assays
- Detection of bound proteins are usually by western blotting, using antibody to the putative interactor
- Used extensively with GST-domain fusions in structure function studies
- New proteins can be identified if metabolically labeled cells are used

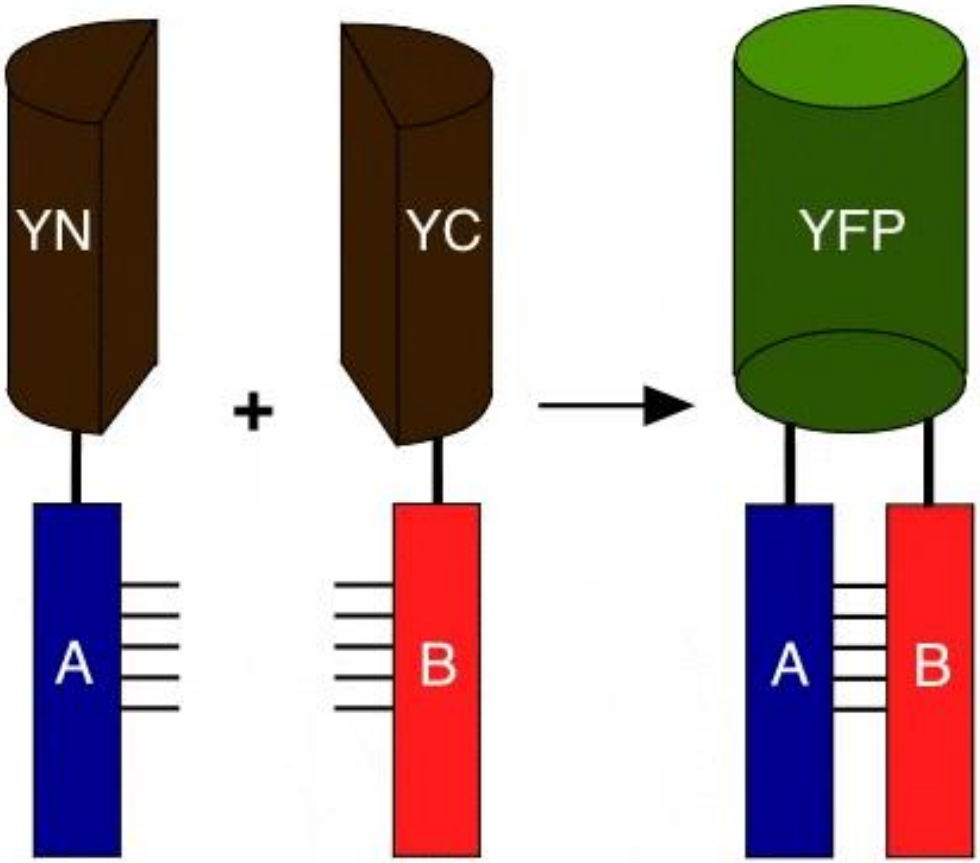
Co-immunoprecipitation



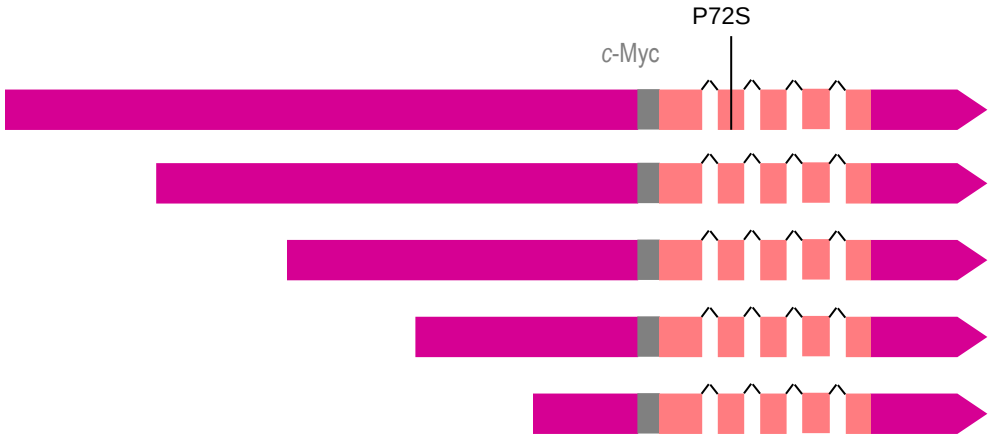
Flow chart of the Co-Immunoprecipitation procedure used in the Nuclear Complex Co-IP Kit.
Nuclear extract is prepared using a combination of low-salt buffers and enzymatic shearing, which helps protect nuclear protein complexes as they are released from the DNA. Immunoprecipitation is then carried out and the protein complex is washed using buffers that can be adjusted by addition of salt and detergent to optimize the stringency required to maintain the complex while eliminating non-specific proteins. Western blot is then performed using a 2nd antibody directed against a 2nd protein of interest.

Split-YFP

- Protoplast transfection



Upstream - Promotor analysis (yeast one hybrid)



Promoter (bp)	Activity
2,400	Yes
1,500	Yes
1,000	Yes
500	No
150	No
