# Ecotoxicological bioassays

Jakub Hofman & Klára Hilscherová

Research centre  
for toxic compounds  
in the environment

# Introduction

# Protection of environment / nature

- Is and must be primary aim of **sustainably developing society**
- **why? – discussion (ecosystem services, human, ethics ...)**

## How to protect ?

- Policy
- Legislation
- Research
- Education

**Ecotoxicology – offers knowledge and tools useful for the effective and reasonable environmental protection**

**tools = ecotoxicological bioassays**

# Ecotoxicology

**Discipline on the border of ecology and toxicology studying and evaluating direct and indirect effects of man-made or natural harmful chemicals or other stressors on animals (except human), plants and microorganisms at all levels of biological organization**

# Ecotoxicity bioassay, ecotoxicity test

- **a tool (method, procedure ...) for ecotoxicological research and praxis – for environmental legislation and protection**
- biota (tissue, organism, population, ecosystem ...) is exposed to chemicals (and/or other factors), in the lab (controlled conditions) or in the field (less controlled) and effects are evaluated and related to exposure
- **WHY?** To understand the cause-effects relationships (causality, dose-response ...)

# Why bioassays?

**Chemical analyses only are not able to identify risks properly because:**

- 1) Real exposure is different – **bioavailability** in particular situation
- 2) Pollutant **mixture** - always in real ecosystems
- 3) **Matrix** itself has effects or interacts with effects of contaminants
- 4) Analytical methods are **limited** vs. wide spectrum of possibly toxic chemicals

# Bioassays useful for:

- prospective ecological risk assessment
  - using bioassays for chemical compounds, pesticides
  - using bioassays for materials, mixtures
  - before they enter the environment

# Bioassays useful for:

- retrospective ecological risk assessment
  - using bioassays for real environmental samples
  - searching the causalities between pollution and effects

# Bioassays useful for:

# Bioassays useful for:

# Bioassay development

- **old bioassays** – acute, ecologically irrelevant, testing pure chemicals, pesticides
- **new bioassays** – sublethal endpoints, ecological relevancy, chemical mixtures, miniaturization, simple to measure endpoints

# Differentiation of bioassays

- major trophic levels
  - producers
  - consumers
  - destruents
- aquatic / soil
- single / multiple species
- acute / chronic effects
- contact bioassays / eluate bioassays / TIE
- legislative / standardized (practical) / experimental (research)
- toxicity / bioaccumulation / biodegradation tests

# Differentiation of bioassays

Chesapeake Bay Estuary

Pond  
micro-ecosystems

Laboratory microcosms

Bioassay tanks

cell lines

size, complexity  
ecological relevancy  
controlling the conditions  
old / fresh contamination  
no. of species  
...

# Differentiation of bioassays

# Differentiation of bioassays

- limit test / comparison test
- concentration – response tests – preliminary, final

# Use of bioassays

- Testing toxicity of natural **contaminated matrices**
  - Rather new in ecotoxicology – many open challenges
    - Whole effluent toxicity testing (WET)
    - Contact soil toxicity assays
  - More complex and more complicated
    - „cause-effects“ often not clear
      - Natural variability in matrices
      - Algal tests - nutrients (Nitrogen, Phosphorus) >> Toxic compounds

[http://www.oecd.org/document/40/0,3746,en\\_2649\\_34377\\_37051368\\_1\\_1\\_1\\_1,00.html](http://www.oecd.org/document/40/0,3746,en_2649_34377_37051368_1_1_1_1,00.html)

## Aquatic organisms

Test No. 201: Alga, Growth Inhibition Test	11 July 2006
Test No. 221: Lemna sp. Growth Inhabition Test	11 July 2006
Test No. 202: Daphnia sp. Acute Immobilisation Test	23 Nov 2004
Test No. 211: Daphnia magna Reproduction Test	16 Oct 2008
Test No. 203: Fish, Acute Toxicity Test	17 July 1992
Test No. 204: Fish, Prolonged Toxicity Test: 14-Day Study	04 Apr 1984
Test No. 210: Fish, Early-Life Stage Toxicity Test	17 July 1992
Test No. 212: Fish, Short-term Toxicity Test on Embryo and Sac-Fry Stages	21 Sep 1998
Test No. 215: Fish, Juvenile Growth Test	21 Jan 2000
Test No. 229: Fish Short Term Reproduction Assay	08 Sep 2009
Test No. 230: 21-day Fish Assay	08 Sep 2009
Test No. 231: Amphibian Metamorphosis Assay	08 Sep 2009

## Sediment organisms

Test No. 218: Sediment-Water Chironomid Toxicity Using Spiked Sediment	23 Nov 2004
Test No. 219: Sediment-Water Chironomid Toxicity Using Spiked Water	23 Nov 2004
Test No. 233: Sediment-Water Chironomid Life-Cycle Toxicity Test Using Spiked Water or Spiked Sediment	23 July 2010
Test No. 225: Sediment-Water Lumbriculus Toxicity Test Using Spiked Sediment	15 Oct 2007

## Soil organisms

Test No. 208: Terrestrial Plant Test: Seedling Emergence and Seedling Growth Test	17 Aug 2006
Test No. 227: Terrestrial Plant Test: Vegetative Vigour Test	17 Aug 2006
Test No. 207: Earthworm, Acute Toxicity Tests	04 Apr 1984
Test No. 220: Enchytraeid Reproduction Test	23 Nov 2004
Test No. 222: Earthworm Reproduction Test ( <i>Eisenia fetida/Eisenia andrei</i> )	23 Nov 2004
Test No. 228: Determination of Developmental Toxicity of a Test Chemical to Dipteran Dung Flies( <i>Scathophaga stercoraria</i> L. (Scathophagidae), <i>Musca autumnalis</i> De Geer (Muscidae))	16 Oct 2008
Test No. 232: Collembolan Reproduction Test in Soil	08 Sep 2009
Test No. 226: Predatory mite ( <i>Hypoaspis (Geolaelaps) aculeifer</i> ) reproduction test in soil	16 Oct 2008
Test No. 216: Soil Microorganisms: Nitrogen Transformation Test	21 Jan 2000
Test No. 217: Soil Microorganisms: Carbon Transformation Test	21 Jan 2000

## Other tests

Test No. 213: Honeybees, Acute Oral Toxicity Test	21 Sep 1998
Test No. 214: Honeybees, Acute Contact Toxicity Test	21 Sep 1998
Test No. 205: Avian Dietary Toxicity Test	04 Apr 1984
Test No. 206: Avian Reproduction Test	04 Apr 1984
Test No. 223: Avian Acute Oral Toxicity Test	23 July 2010

## Aquatic microorganisms

ISO 10712:1995	Water quality -- <u>Pseudomonas putida growth inhibition test</u> (Pseudomonas cell multiplication inhibition test)
ISO 11348-1:2007	Water quality -- Determination of the inhibitory effect of water samples on the <u>light emission of Vibrio fischeri</u> (Luminescent bacteria test) -- Part 1: Method using freshly prepared bacteria
ISO 11348-2:2007	Water quality -- Determination of the inhibitory effect of water samples on the light emission of Vibrio fischeri (Luminescent bacteria test) -- Part 2: Method using liquid-dried bacteria
ISO 11348-3:2007	Water quality -- Determination of the inhibitory effect of water samples on the light emission of Vibrio fischeri (Luminescent bacteria test) -- Part 3: Method using freeze-dried bacteria
ISO 13641-1:2003	Water quality -- Determination of inhibition of gas production of anaerobic bacteria -- Part 1: General test
ISO 13641-2:2003	Water quality -- Determination of inhibition of gas production of anaerobic bacteria -- Part 2: Test for low biomass concentrations
ISO 13829:2000	Water quality -- Determination of the genotoxicity of water and waste water using the <u>umu-test</u>
ISO 16240:2005	Water quality -- Determination of the genotoxicity of water and waste water -- Salmonella/microsome test ( <u>Ames test</u> )
ISO/DIS 11350	Water quality -- Determination of the genotoxicity of water and waste water -- Salmonella/microsome fluctuation test (Ames fluctuation test)
ISO 15522:1999	Water quality -- Determination of the inhibitory effect of water constituents on the growth of activated sludge microorganisms
ISO 21338:2010	Water quality -- Kinetic determination of the inhibitory effects of sediment, other solids and coloured samples on the light emission of Vibrio fischeri ( <u>kinetic luminescent bacteria test</u> )
ISO 8192:2007	Water quality -- Test for inhibition of oxygen consumption by activated sludge for carbonaceous and ammonium oxidation
ISO 9509:2006	Water quality -- Toxicity test for assessing the inhibition of nitrification of activated sludge microorganisms

International  
Standardization  
Organization

## Aquatic invertebrates

ISO 6341:1996	Water quality -- Determination of the inhibition of the mobility of <i>Daphnia magna</i> Straus (Cladocera, Crustacea) -- <u>Acute toxicity test</u>
ISO 10706:2000	Water quality -- Determination of <u>long term toxicity of substances to Daphnia magna</u> Straus (Cladocera, Crustacea)
ISO/DIS 14380	Water quality -- Determination of the <u>acute toxicity to Thamnocephalus platyurus</u> (Crustacea, Anostraca)
ISO/CD 16303	Water quality -- Determination of toxicity of <u>fresh water sediments using Hyalella azteca</u>
ISO 10872:2010	Water quality -- Determination of the toxic effect of sediment and soil samples on growth, fertility and <u>reproduction of Caenorhabditis elegans</u> (Nematoda)
ISO 16712:2005	Water quality -- Determination of acute toxicity of marine or estuarine sediment to amphipods
ISO 20665:2008	Water quality -- Determination of chronic toxicity to <i>Ceriodaphnia dubia</i>
ISO 20666:2008	Water quality -- Determination of the chronic toxicity to <i>Brachionus calyciflorus</i> in 48 h
ISO 14669:1999	Water quality -- Determination of acute lethal toxicity to marine copepods (Copepoda, Crustacea)
ISO/DIS 14371	Water quality -- Determination of freshwater-sediment subchronic toxicity to <i>Heterocypris incongruens</i> (Crustacea, Ostracoda)
ISO 7828:1985	Water quality -- Methods of biological sampling -- Guidance on handnet sampling of aquatic benthic macro-invertebrates
ISO 8265:1988	Water quality -- Design and use of quantitative samplers for benthic macro-invertebrates on stony substrata in shallow freshwaters
ISO 8689-1:2000	Water quality -- Biological classification of rivers -- Part 1: Guidance on the interpretation of biological quality data from surveys of benthic macroinvertebrates
ISO 8689-2:2000	Water quality -- Biological classification of rivers -- Part 2: Guidance on the presentation of biological quality data from surveys of benthic macroinvertebrates
ISO/DIS 10870	Water quality -- Guidelines for the selection of sampling methods and devices for benthic macroinvertebrates in fresh waters
ISO/WD 16778	Water quality -- Calanoid copepod development test with <i>Acartia tonsa</i>

# ISO guidelines

International  
Standardization

## Aquatic vertebrates

ISO 15088:2007	Water quality -- Determination of the acute toxicity of <u>waste water to zebrafish eggs</u> ( <i>Danio rerio</i> )
ISO 7346-1:1996	Water quality -- Determination of the <u>acute lethal toxicity of substances to a freshwater fish</u> [ <i>Brachydanio rerio Hamilton-Buchanan (Teleostei, Cyprinidae)</i> ] -- Part 1: Static method
ISO 7346-2:1996	Water quality -- Determination of the acute lethal toxicity of substances to a freshwater fish [ <i>Brachydanio rerio Hamilton-Buchanan (Teleostei, Cyprinidae)</i> ] -- Part 2: Semi-static method
ISO 7346-3:1996	Water quality -- Determination of the acute lethal toxicity of substances to a freshwater fish [ <i>Brachydanio rerio Hamilton-Buchanan (Teleostei, Cyprinidae)</i> ] -- Part 3: Flow-through method
ISO 10229:1994	Water quality -- Determination of the prolonged toxicity of substances to freshwater fish -- Method for evaluating the effects of substances on the <u>growth rate of rainbow trout</u> ( <i>Oncorhynchus mykiss</i> Walbaum (Teleostei, Salmonidae))
ISO 12890:1999	Water quality -- Determination of toxicity to embryos and larvae of freshwater fish -- Semi-static method
ISO 21427-1:2006	Water quality -- Evaluation of genotoxicity by measurement of the induction of micronuclei -- Part 1: Evaluation of genotoxicity using amphibian larvae
ISO 21427-2:2006	Water quality -- Evaluation of genotoxicity by measurement of the induction of micronuclei -- Part 2: Mixed population method using the cell line V79
ISO 23893-1:2007	Water quality -- Biochemical and physiological measurements on fish -- Part 1: Sampling of fish, handling and preservation of samples
ISO/TS 23893-2:2007	Water quality -- Biochemical and physiological measurements on fish -- Part 2: Determination of ethoxresorufin-O-deethylase (EROD)
ISO/CD 23893-3	Water quality -- Biochemical and physiological measurements on fish -- Part 3: Determination of vitellogenin

# ISO guidelines

## Soil microorganisms

ISO 10381-6:2009	<b>Soil quality -- Sampling -- Part 6: Guidance on the collection, handling and storage of soil under aerobic conditions for the assessment of microbiological processes, biomass and diversity in the laboratory</b>
ISO 14240-1:1997	<b>Soil quality -- Determination of soil microbial biomass -- Part 1: Substrate-induced respiration method</b>
ISO 14240-2:1997	<b>Soil quality -- Determination of soil microbial biomass -- Part 2: Fumigation-extraction method</b>
ISO 16072:2002	<b>Soil quality -- Laboratory methods for determination of microbial soil respiration</b>
ISO 17155:2002	<b>Soil quality -- Determination of abundance and activity of soil microflora using respiration curves</b>
ISO 15685:2004	<b>Soil quality -- Determination of potential nitrification and inhibition of nitrification -- Rapid test by ammonium oxidation</b>
ISO 14238:1997	<b>Soil quality -- Biological methods -- Determination of nitrogen mineralization and nitrification in soils and the influence of chemicals on these processes</b>
ISO 23753-1:2005	<b>Soil quality -- Determination of dehydrogenase activity in soils -- Part 1: Method using triphenyltetrazolium chloride (TTC)</b>
ISO 23753-2:2005	<b>Soil quality -- Determination of dehydrogenase activity in soils -- Part 2: Method using iodo-tetrazolium chloride (INT)</b>
ISO/DIS 11063	<b>Soil quality -- Method to directly extract DNA from soil samples</b>

# Testing strategy

- **Battery of assays**
  - Fast screening tests (Vibrio fisheri bioluminescence, 30 min toxicity)
  - Standardized acute toxicity tests
  - Further studies with chronic assays
  - **Combine trophic levels! Combine exposure routes!**
- **Various purposes -> guidelines and recommendations**
  - REACH (EU - Registration, Evaluation and Authorisation of Chemicals)
  - Plant protection products + biocides
  - Veterinary and human pharmaceuticals
  - Waste materials ...
- **The most common set ups**
  - algae / D. magna / fish for aquatic environment
  - earthworm (enchytraeid/springtail) / plant for soil environment

# Testing strategy

ISO 15799 (2003): Guidance on the ecotoxicological characterization of soils and soil materials

ISO 17616 (2008): Guidance on the choice and evaluation of bioassays for ecotoxicological characterization of soils and soil materials

## Retention function – Biotests with eluates

## Habitat function - Biotests with solids

# General scheme of bioassay

## 1) Prepare the organism

Culture media, standardized numbers, age, etc.

## 2) Prepare the sample

Dilution series

water/culture media – direct organism exposure

Include BLANK (medium only)

solvent for organic compounds – minimum to be added

Include SOLVENT CONTROL

## 3) Expose organisms

... for appropriate time, number of repetitions,  
under specified conditions

## 4) Evaluate and report results

measure the endpoint / count organisms

validity criteria

statistical evaluation (means, ANOVA, dose-response ...)

Research centre  
for toxic compounds  
in the environment

# Aquatic ecotoxicology bioassays

# Algal growth inhibition test (ISO 8692)

<b>Organisms</b>	Freshwater species: <i>Selenastrum capricornutum</i> , <i>Scenedesmus subspicatus</i> , <i>Chlorella vulgaris</i> , <i>Microcystis aeruginosa</i> , <i>Anabaena flos-aquae</i> , <i>Navicula pelliculosa</i> ; Saltwater species: <i>Skeletonema costatum</i> , <i>Thalassiosira pseudonana</i> , and <i>Dunaliella tertiolecta</i>
<b>Number of organisms per chamber (<math>\pm 10\%</math>)</b>	$2 \times 10^4$ cells/ml
<b>Experimental design</b>	
Test vessel type and size	Sterile Erlenmeyer flasks of borosilicate glass, any size
Test solution volume	Not to exceed 50% of the flask volume for tests conducted on a shaker, and not more than 20% of the flask volume for tests not conducted on a shaker
Number of replicate chambers per sample	2 or more
Test duration	96 h
<b>Physical and chemical parameters</b>	
Water temperature	$24 \pm 2^\circ\text{C}$ for freshwater green and blue-green algae $20 \pm 2^\circ\text{C}$ for <i>Navicula pelliculosa</i> and other saltwater algae
Light quality	Continuous "cool-white" fluorescent
Light intensity	Should not vary by more than $\pm 15\%$ : $60 \mu\text{E m}^{-2}/\text{s}^{-1}$ ( $4300 \text{ lm/m}^2$ ) for freshwater diatoms and green algae $30 \mu\text{E m}^{-2}/\text{s}^{-1}$ ( $2150 \text{ lm/m}^2$ ) for freshwater blue-green algae
Photoperiod	$82-90 \mu\text{E m}^{-2}/\text{s}^{-1}$ ( $5900$ to $6500 \text{ lm/m}^2$ ) for <i>Thalassiosira</i> $60 \mu\text{E m}^{-2}/\text{s}^{-1}$ ( $4300 \text{ lm/m}^2$ ) for <i>Skeletonema</i>
Test solution pH	14 h light/10 h dark for <i>Skeletonema</i> $7.5 \pm 0.1$ for freshwater $8.0 \pm 0.1$ for saltwater
<b>Endpoint</b>	Biomass, cell number, area underneath the growth curve

# Algal growth inhibition test (ISO 8692)

- Miniaturization

- Alternative: Algaltokit

## ALGALTOXKIT F™ MICROBIOTESTS

Cost-effective, culture/maintenance free\* bioassays  
with the micro-algae *Selenastrum capricornutum*  
(renamed *Raphidocelis subcapitata/Pseudokirchnerella subcapitata*)

Algal beads (2 mm)  
> 1 million algal cells per bead

Algal cells

Each Algaltokit  
contains all the materials  
to perform two  
72h growth inhibition tests

# Duckweed bioassay (ISO 20079)

- *Lemna minor*
- 10 leaves per 1 beaker
- pH 6.5; 10 000 lx; 24°C
- 96 hours
- growth, biomass, no. of leaves
- image analysis possible
- validity:
  - 8x increase in control
  - IC<sub>50</sub> for K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> 10-60 mg/L

# Aquatic consumers - invertebrates

*Daphnia magna*

*Artemia salina*

*Chironomus riparius*

*Ceriodaphnia dubia*

*Gammarus*

*Tamnocephalus platyurus*

*Potamopyrgus antipodarum*

*Hyalella azteca*

*Lumbriculus variegatus*

*Tubifex tubifex*

# *Daphnia magna* test (ISO 6341)

- 5 individuals per replicate (min 2 ml)
- no food
- 20°C; dark or 16h light / 8h dark
- 24h, 48h
- medium
  - $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$  11,76 g/l
  - $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$  4,93 g/l
  - $\text{NaHCO}_3$  2,59 g/l
  - KCl 0,23 g/l
  - 25 ml each to 1 L
  - pH 7.8
  - aeration

- no. of immobilized individuals
- validity:
  - $\text{O}_2 > 80\%$  (2 mg/l)
  - mortality in control 10 %

# *Daphnia magna* chronic test (ISO 10706)

- 10 juveniles (24h old) per replicate
- 50ml medium
- 3 times per week medium change
- 21 days

Mortality, survival  
Reproduction  
Juveniles  
Behavior

- 20 °C
- pH 7-9
- dissolved O<sub>2</sub> > 3mg/l
- 16 h light / 8 h dark
- food - algae
- week controls: O<sub>2</sub>, T, pH

# Daphnia magna acute vs chronic test

Test type	Chronic (partial life cycle)	Acute 48 h
Organisms	<i>D. magna</i>	<i>D. magna</i>
Age of test organisms	24-h old	24-h old
Number of organisms per chamber	10	10 (minimum)
Experimental design		
Test vessel type and size	100 ml beakers	250 ml
Test solution volume	80 ml	200 ml
Number of replicates per sample	2 (minimum)	3 (minimum)
Feeding regime	Various combinations of trout chow, yeast, alfalfa, green algae, and diatoms given in excess	Do not feed
Test duration	21 days	48 hr
Physical and chemical parameters		
Water temperature	20°C	20 ± 2°C
Light quality	Ambient laboratory levels	Ambient laboratory levels
Light intensity	Up to 600 lux	540 to 1080 lux
Photoperiod	16 h light and 8 h dark (with 15- to 30-min transition)	16 h light and 8 h dark
pH range	7.0–8.6	7.0–8.6
DO concentration	40–100%	60–100%
Aeration	Not necessary	none
Endpoint	Survival, growth, and reproduction	Immobilization

# Alternative: microbiotests

\*Test organisms are included in the kits as "dormant eggs (cysts)" which can be hatched "on demand"

## ROTOXKIT F *chronic*

Contains all the materials to perform three 48h reproduction assays

## THAMNOTOXKIT F™ *MICROBIOTESTS*

Nile tilapia, *Oreochromis niloticus*

# Fish bioassay acute (ISO 7346 1-3)

- *Brachydanio rerio*, ...
- 26°C
- medium:
  - pH  $7.8 \pm 0.2$
  - $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ ,  $\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$ ,  $\text{NaHCO}_3$ , KCl
  - dissolved  $\text{O}_2 > 90\%$
- 24, 48, 72, 96 h
- validity: mortality in control < 10%,  $\text{O}_2$  etc.

Continuous:  
-exposure is function of duration

Static renewal, with recovery:  
-exposure is function of max conc'n

Static renewal, no recovery:  
-exposure is function of cumulative concentration

# Prolonged and chronic fish tests

## Prolonged

- OECD 204 – 14d, ISO 10229 - 21 d
- semistatic or flow through
- food; controlled pH, O<sub>2</sub>
- endpoints: breathing, gills, behavior, orientation, mortality
- 14-21d LC<sub>50</sub>, NOEC, LOEC

## Chronic

- OECD 210; US EPA OPPTS 850.1500
- 7 - 200 days
- starting with eggs or embryos or juveniles
- endpoints: survival, behavior, feeding, length, growth, weight, biochemical parameters, bioaccumulation

# Embryolarval test (ISO 12890, OECD 210, 212)

- 100 embryos per replicate
- 6-7 days
- no food
- T, pH, O<sub>2</sub>
- Endpoints: hatching, survival, morphology, behavior, weight, length, anomalies

# FETAX – Frog Embryo Teratogenicity Assay Xenopus

- Choriogonadotropin → eggs after 9-12h
- 25 embryos per Petri dish, 10 ml test solution
- 24°C; pH 6.5-9
- 96h
- validity:
  - 6-aminonicotinamid  
LC50 2,23 mg/ml, EC50 0,005 mg/ml
- mortality, growth, abnormalities
- Atlas of Abnormalities – John A. Bantle

Table 4.11 The Frog Embryo Teratogenesis Assay: Xenopus (FETAX)

Test type	96 h static renewal
Organism	<i>Xenopus laevis</i>
Age of parent organism	Adult male: at least 2 years of age Adult female: at least 3 years of age
Size of parent organism	Adult male: 7.5–10 cm in crown-rump length Adult female: 10–12.5 cm in length
Feeding	Adult: three feedings per week of ground beef liver; liquid multiple vitamins should be added to the liver in concentrations from 0.05–0.075 cc/5 g liver
Experimental design	
Test vessel type and size	Adults: large aquarium or fiberglass or stainless steel raceways; side of tank should be opaque and at least 30 cm high. Breeding adults: 5- or 10-gallon aquarium fitted with a 1-cm mesh suspended approximately 3 cm from the bottom of the tank; nylon or plastic mesh is recommended; aquarium should be fitted with a bubbler to oxygenate the water; the top of aquarium should be covered with an opaque porous material such as a fiberglass furnace filter
Test solution volume	Embryos: 60-mm glass or 55-mm disposable polystyrene Petri dishes Adults: water depth should be 7-14 cm Embryos: 10 ml per dish
Exposure to test substance	Continuous throughout test
Replacement of test material	Every 24 h
Number of concentrations	5
Number of replicates per sample	2
Number of organisms per chamber	Adults: 4–6 per 1800 cm <sup>2</sup> of water surface area Breeding adults: 2 Embryos: 25
Test duration	96 h
Physical and chemical parameters	
Temperature	Adult: 23 ± 3°C Embryos: 24 ± 2°C
Photoperiod	12 h light / 12 h dark
pH range	6.5 to 9
TOC	10 mg/l
Alkalinity and hardness	Between 16 and 400 mg/l as CaCO <sub>3</sub>
Endpoint	Acute (mortality) and subacute (teratogenesis)

# *Vibrio fisheri* test (ISO 11348)

- 5-30 min
- luminiscence inhibition

- problem with particles and colour  
→ flash test

# Specific mechanisms of toxicity

- Cell lines (H4IIE.luc – diox.; MVLN, T47D.Luc – estrog.)
- Nuclear receptors (AhR, ER, AR, RAR/RXR)
- AhR/ER – luciferase reporter gene
- CALUX (Chemical Assisted Luciferase eXpression)

Adapted from Blankenship (1994)

Research centre  
for toxic compounds  
in the environment

# Soil ecotoxicology bioassays

# Exposure methods

- Tested chemical mixed with soil
  - Artificial soil (OECD, ISO)
  - Real soil (LUFA 2.2 ...)

- Topic applications, injections, forced feeding ... not so relevant

# What is artificial soil ?

Soil component	Content expressed on % dry mass basis
• Sphagnum peat (air dried), finely ground and with no visible plant remains	10
• Kaolinite clay (air dried), containing not less than 30 % kaolinite	20
• Industrial quartz sand (air dried), predominantly fine sand with more than 50 % by mass of particle size 0,05-0,2 mm (amount dependent on calcium carbonate required)	70
• Calcium carbonate ( $\text{CaCO}_3$ , pulverised, analytical grade) to obtain an initial pH of $6.0 \pm 0.5$	0.3-1.0

OECD 1984. Guideline for testing chemicals 207. Earthworm acute toxicity test.

- Is standard medium for many soil bioassays ...
- Is much more relevant than solution, agar, filter paper ...
- Should solve problem of high variability of natural soils ...
- Should resemble natural loamy soil ...
- Should enable the toxicity extrapolation to natural soils ...

# LUFA soil (<http://lufa-speyer.de/>)

# Avoidance test

ISO 17512-1

<b>Guideline:</b>	ISO/DIS 17512 (draft)
<b>Species:</b>	<i>E. andrei</i>
<b>Substrate:</b>	LUFA St. 2.2 standard soil
<b>Duration:</b>	1 - 2 days
<b>Parameter:</b>	Behaviour of the worms
<b>Test vessels:</b>	Dual chamber

# Bioaccumulation test

Test organism	<i>Eisenia fetida/andrei</i> , or <i>Enchytraeus albidus</i> , adult worms of similar size
Test substrate	spiked artificial soil based on OECD guideline No. 207 (OECD 1984)
Control substrate	uncontaminated artificial soil based on OECD guideline No. 207 (OECD 1984)
Biological parameters	concentration of test item in worms during uptake and elimination period
Endpoints	bioaccumulation factor, uptake rate coefficient, elimination rate constant
Test duration	uptake period: until steady state or 28 d; plus 10 day elimination period
Temperature	$20 \pm 2^\circ\text{C}$
Light regime & light intensity	constant light; 400 to 800 lx
Test chambers	e.g. 250 mL/50 mL glass tubes; additional chambers of appropriate size for chemical analyses
Feeding during exposure	food added to soil directly after spiking; additional feeding once per week during exposure
Water	periodic addition of deionised water
Equilibration	4 days; spiked soil under test conditions
Test item	$^{14}\text{C}$ -labelled/metal
Spiking of soil	if possible, test item dissolved in water mixed with dry soil; optional: coating of sand
Analysis of test item	in worms and soil
Number of test concentrations	1 plus control(s)
Test concentrations	to be fixed (expressed in Bq or $\text{mg kg}^{-1}$ soil dry weight)
Number of replicates per test	at least 3 per sampling date
concentration/sampling date	
Number of organisms per test chamber	<i>Eisenia</i> : 1; <i>Enchytraeus</i> : 20
Determination of soil dry weight and organic carbon content in soil	4 samples after soil preparation
Determination of lipid content in biota	4 samples at end of uptake phase <sup>a</sup>
Validity of test	mortality during test period $\leq 10\%$ (earthworms), $\leq 20\%$ (enchytraeids)
Evaluation	Use of appropriate methods (e.g. nonlinear regression analysis, ANOVA, Dunnett's t-test)

# *Lactuca sativa* root growth

ISO 11269-1

**Germination tests with plants – testing toxicity in the aquatic media (*Sinapis alba*) or in soil (*Lactuca sativa*)**

# Higher plants chronic toxicity ISO 22030

# Soil microbial assay according to OECD, ISO

**Real uncontaminated agricultural soil with indigenous microflora:**

$\text{pH}_{\text{KCl}} = 7 - 7.5$   $C_{\text{bio}} = 400 - 700 \mu\text{g.g}_{\text{d.w.}}^{-1}$

$C_{\text{org}} = 1.5\%$   $\text{BR} = 0.5 - 0.7 \mu\text{g CO}_2\text{-C.h}^{-1}\cdot\text{g}_{\text{d.w.}}^{-1}$

sand = 70%

# Effects on microbial respiration

# Micro & Mesocosms

Expensive & time consuming (e.g. *Pesticide testina*)

Variable results (natural variability ...)

Higher ecological relevancy

Research centre  
for toxic compounds  
in the environment

# Results of the bioassays and their use

# Data from ecotoxicity tests

# Dose(concentration) - response relationship

## Concentration:

## Concentration and Dose

## Note

Concentration and dose both refer to the amount of test material to which the test organism is subjected. Concentrations are used to describe the amount of test material in the testing environment (e.g., mg/L in water, mg/kg in soil or mg/kg in food). Doses are used to describe the amount of test material administered to a subject (e.g., mg/kg-bodyweight in an avian bolus study). Statistical methods for both types of studies are identical; however, interpretations are different. Although "concentration" is used throughout this document, all the statistical methods presented here also apply to studies in which a dose is used.

**No Observed Effect Concentration (NOEC)**  
**Lowest Observed Effect Concentration (LOEC)**  
**EC<sub>x</sub> ( x % effects concentration)**  
**LC<sub>x</sub> ( x % lethal concentration)**

# Bioassay vs real ecosystem

- Bioassay is only simplified ecosystem model
- species differs, matrix differs, single species vs multispecies, individuals vs populations

*Aporrectodea caliginosa*

*Lumbricus terrestris*

VS

*Eisenia fetida* – compost worm !!

# Bioassay vs reality

Objective = to protect real ecosystems, safe concentration

→ need to extrapolate bioassay results to be valid for ecosystems

- how much information we have?
- uncertainty factors, 1, 10, 100, 1000

Extrapolate

Data	Assessment factor
L(E)C50 short-term toxicity tests	1000
NOEC for 1 long-term toxicity test	100
NOEC for additional long-term toxicity tests of 2 trophic levels	50
NOEC for additional long-term toxicity tests of 3 species of 3 trophic levels	10

Species sensitivity distribution (SSD)

HC5 = 95% protection level

PNEC (limits, EQS)

# Risk assessment with earthworms

## Prüfung der Auswirkungen auf Regenwürmer

*Labortest mit  
Kompostwurm*

*Kokons des  
Kompostwurms*

*einheimische  
Regenwurmart*

### 1. Akute Toxizität (2 Wochen)

Bewertung: TER =  $\frac{LC50}{PEC}$  < 10  
Mortalität,  
Körpergewicht

### 2. Einfluss auf die Fortpflanzung (8 Wochen)

Bewertung: TER =  $\frac{NOEC}{PEC}$  < 5  
Anzahl der  
Jungtiere,  
Körpergewicht

### 3. Auswirkungen im Freiland (1 Jahr)

Bewertung: Individuenzahlen,  
Risiken für Populationen und  
Lebensgemeinschaften

# Summary - Take home message

- Bioassays are necessary addition to chemical analyses
- Lot of standardized/experimental bioassays to choose from
- Necessary know-how (lab tricks, weakpoints, when to use, interpretation, data evaluation ...)
- No single test gives all information - battery of bioassays

# Thanks for your attention!!!!
