

ECHINODERMS

- Stalked = pelmatozoans (crinoids, cystoids, blastoids)
- echinoids

Echinoid spine

FORAMINIFERS

- small Devonian to Permian
- late Paleozoic large Fusulinids
- Cretaceous large Orbitolinids
- middle Jurassic to present planktonics
- Tertiary Nummulites, Alveolins,
Discocyclins

Calcareous ALGAE and CYANOBACTERIA

- Cyanobacteria ('blue-green')
- red algae: Corallinaceans,
Solenoporaceans
- green algae: Udoteaceans,
Dasycladaceans

CYANOBACTERIA

Frutexites

Epiphyton

Girvanella

Cayeuxia

Renalcis

Garwoodia

Rothpletzella

RED ALGAE

Thin-section criteria	Stratigraphic range
Corallinaceans Fine net-work structure; cell size < 5 to 15 μm ; differentiation according to cell size and arrangement; case-shaped cavities in lines or isolated within the tissue; crusts, nodules, branches; in transmitted light dark. Pl. 54	Early Cretaceous to recent, possibly already Early Paleozoic
Peyssoneliaceans Net-work structure; cell size 20 - 30 μm ; basal calcification with botryoids; distinctly set sheets; blades, nodules; in transmitted light golden, yellowish, gray Pl. 64/10	Early Cretaceous to recent possibly also Late Paleozoic
Solenoporaceans Closely packed vertical filaments, sometimes with horizontal partitions; cell size 10 - 100 μm ; no cell differentiation, no case-shaped cavities; nodular and branched . . Pl. 55	Cambrian to Tertiary (Miocene)
Ancestral red algae (Archaeolithophyllaceans) Net-work structure; cell size approx. 10 - 30 μm ; cell differentiation; blades and nodules; in transmitted light yellowish, gray Pl. 56/2, 8	Carboniferous and Permian (Viséan to Late Permian)
Problematic algae Ungdarellaceans Net-work structure; cell size about 20 μm ; cell differentiation; very small encrusting or isolated structures; in transmitted light often golden, yellowish . . Pl. 56/5-7, Pl. 108/7-8	Carboniferous and Permian Common: Viséan–Moscovian
Stacheinaceans Indistinct network; very small encrusting structures; in transmitted light often golden, yellowish Pl. 108/10	Carboniferous (Viséan to Moscovian)
