1. Big Data: USA and EU

Obama Administration Releases Historic Open Data Rules to Enhance Government Efficiency and Fuel Economic Growth

- groundbreaking new steps to make information generated and stored by the Federal Government more open and accessible to innovators and the public, to fuel entrepreneurship and economic growth while increasing government transparency and efficiency.

President Obama said:

“One of the things we’re doing to fuel more private sector innovation and discovery is to make vast amounts of America’s data open and easy to access for the first time in history. And talented entrepreneurs are doing some pretty amazing things with it.”

“Starting today, we’re making even more government data available online, which will help launch even more new startups. And we’re making it easier for people to find the data and use it, so that entrepreneurs can build products and services we haven’t even imagined yet.”

European Union

Big Data is an emerging field where innovative technology offers alternatives to resolve the inherent problems that appear when working with huge amounts of data, providing new ways to reuse and extract value from information.

Three main dimensions characterize Big Data: huge variety of data format, often time-sensitive and large.

Big Data offers tremendous untapped potential value for many sectors but no specific intelligent-large-data-handling/brokering industrial sector exists.

2. What is it Geo Info Strategy and why we need it?

GeoInfoStrategy:

Complex system ensuring management of spatial (geographic) data and information and,

contemporary defining the position, tasks, methods of realization and specifications of geospatial community in the very wide ICT stream (visualization, standardisation, georeferencing, object classifications,....)

Geo Info strategy of Czech Rep. should be based on 4 principles (Konečný, 2009)

Management:

Design of management structure necessary for optimization of the benefits of geospatial resources paid by the government.

Data:

to collect, maintain and protect fundamental (priority) geospatial datasets and create directives for non-fundamental (other) geospatial data.

Access:

ensure that geospatial information and services paid by the state were easily available , accesible, and evaluable;

Interoperabilita:

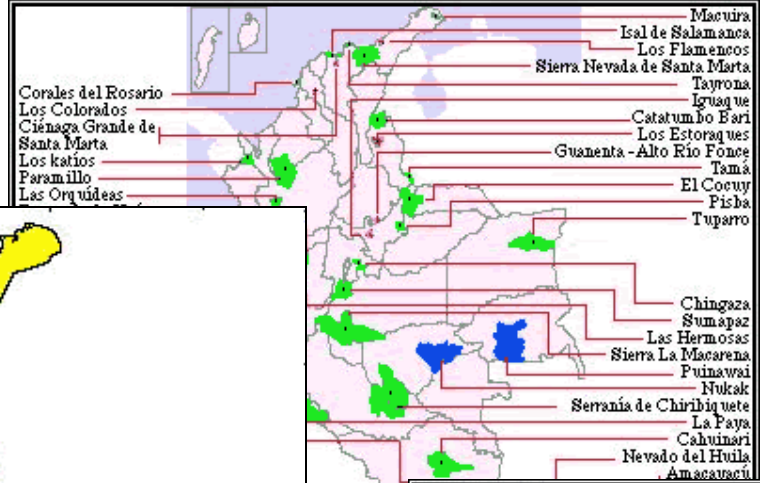

Ministry of Interior should ensure continuity of Geospatial Strategy for the development of strategic plans in information, knowledge - based society.

Creating a panel led by non-political expert.

Ensure the sustainability of the processes in the GI **regardless of political changes.**

3. Where we are now?

- Global Mapping
- GMES and INSPIRE: step ahead than GOOGLE, offering data (not only showing)
- GEO, GEOSS
- Digital Earth (Annoni and JRC)
- Concepts and strategies (Spatial-Enabled Society, e-Government,)
- But also privacy data problems

- REGIÓN ANDINA**
- Huila de los Pastos
 - Fosa del Patía
 - Cordillera occidental
 - Altiplano de Popayán
 - Valle del Cauca
 - Cañón del Cauca
 - Macizo Colombiano
 - Cordillera Central Medional
 - Macizo Volcánico
 - Montaña antioqueña
 - Alto Magdalena
 - Magdalena medio
 - Vertiente magdalense de la cordillera Oriental
 - Altiplano cundi-boyacense
 - Montaña santandereana
 - Fosa del Suarez y Chicamocho
 - Macizo Santurbán
 - Catatumbo
 - Los Motilones
 - Vertiente Oriental Andina
- REGIÓN CARIBE**

Regiones geográficas

- Desértico
- Árido
- Semiárido
- Semihúmedo
- Húmedo
- Superhúmedo

Understanding Digital Earth

4. Spatial Data Infrastructure Concepts

Spatial Data Infrastructures

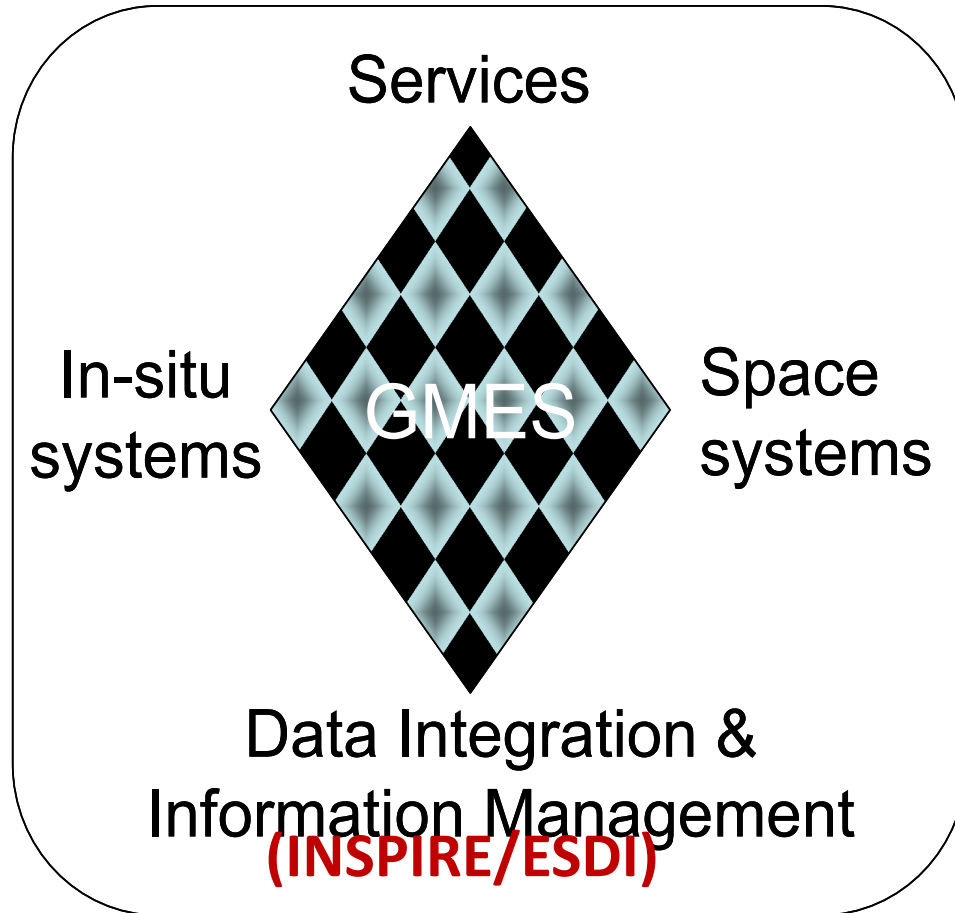

The term *Spatial Data Infrastructure (SDI)* is used to *encapsulate the technologies, policies, institutional arrangements, financial and human resources that facilitate the availability, access and effective usage of geographic data.*

The SDI provides the means for *discovery, access and application* of spatial data for policy-makers, planners and managers, citizens and their organizations.

SDI technologies consist of *a set of data services* that provide geographic data and their attributes.

Services and data are documented with *meta-data* which that subsequently offer the means *to discover, visualise and evaluate the data through the Web*. Additionally, methods are provided to access the data. Applications are built to solve specific needs on the data service layer.

Global Monitoring for Environment and Security

Overall GMES objectives

to provide information services to policy-makers and other users

Virginia PUZZOLO, EC DG Enterprise-GMES
Bureau, Prague Symposium, 2009

Overall architecture

Four main types of products:

Early warning

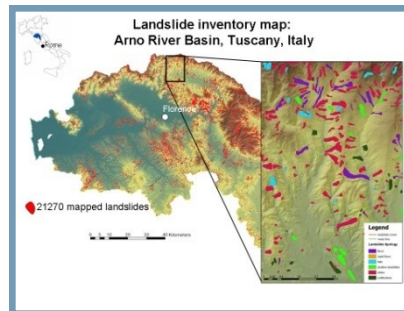

Reference maps

Assessment maps

Thematic maps

**For headquarters,
decision-makers
and in-field operatives
In Europe and worldwide**

ERCS 1st priority

Rapid mapping on demand in case of humanitarian crises, natural disasters, and man-made emergency situations within & outside Europe

- **Reference maps** available within 6 hours over crisis area
- **Damage assessment maps** available within 24 hours & daily updated
- **Situation maps and forecasts** of evolution of situations within the few days-weeks after crisis

1st Generation

2nd Generation

Countries begin developing SDI anytime along the continuum

Continuum of SDI Development

Product-Based SDI development model

- Definition of data
- Collection of data
- Integration of data
- Database creation
- More implementation

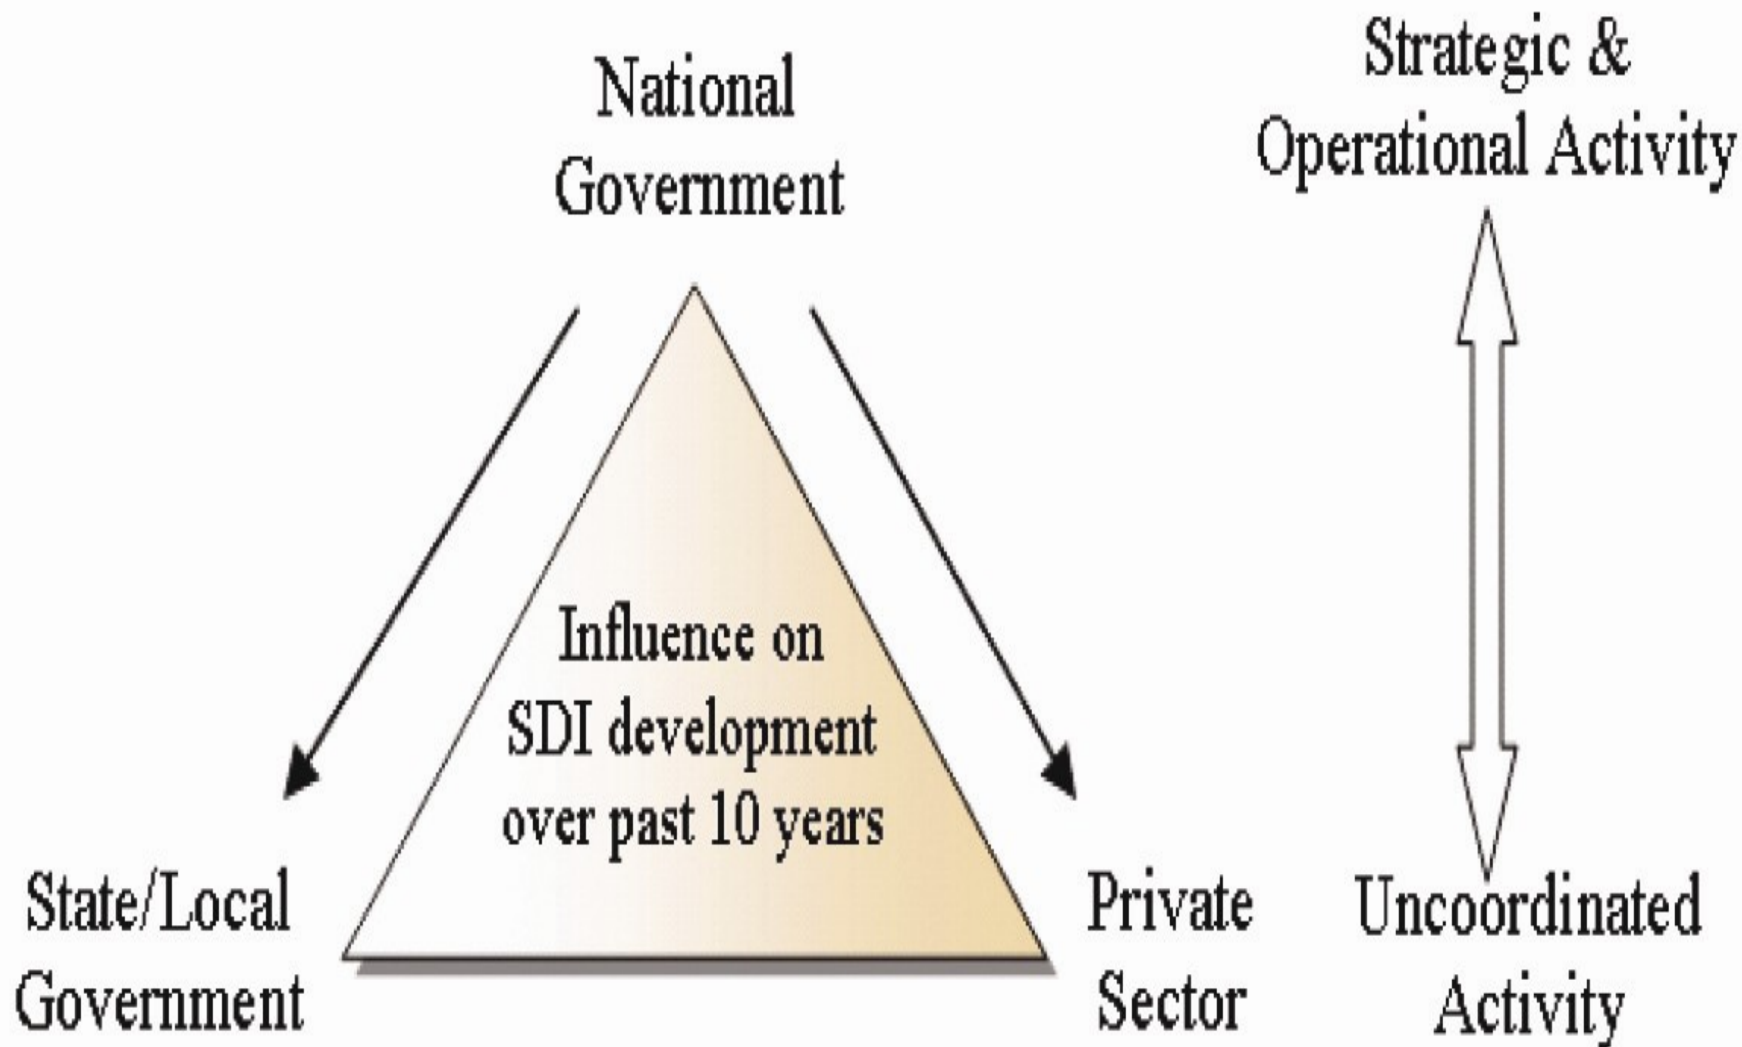

Process-Based SDI development model

- Knowledge infrastructure
- Capacity building
- Communication
- Coordination

Relationship between the first and second generations of SDIs.

5. Spatially-Enabled Society

Australian Government, Ministerial Online and Communications Council

8 September, 2006

“...spatially-enabled government is an exciting area for government. Spatially-enabled government uses place or location to manage and integrate government services and enhance business opportunities.”

The Hon Gary Nairn MP, Special Minister for State, Australian Government

The answer: Provide the systems and people use them!!!

Consider: Google Earth merging with built and environment data. This unleashes the power of both technologies ...

emergency response, taxation assessment, environmental monitoring and conservation, economic planning and assessment, social services planning, infrastructure planning, etc, etc

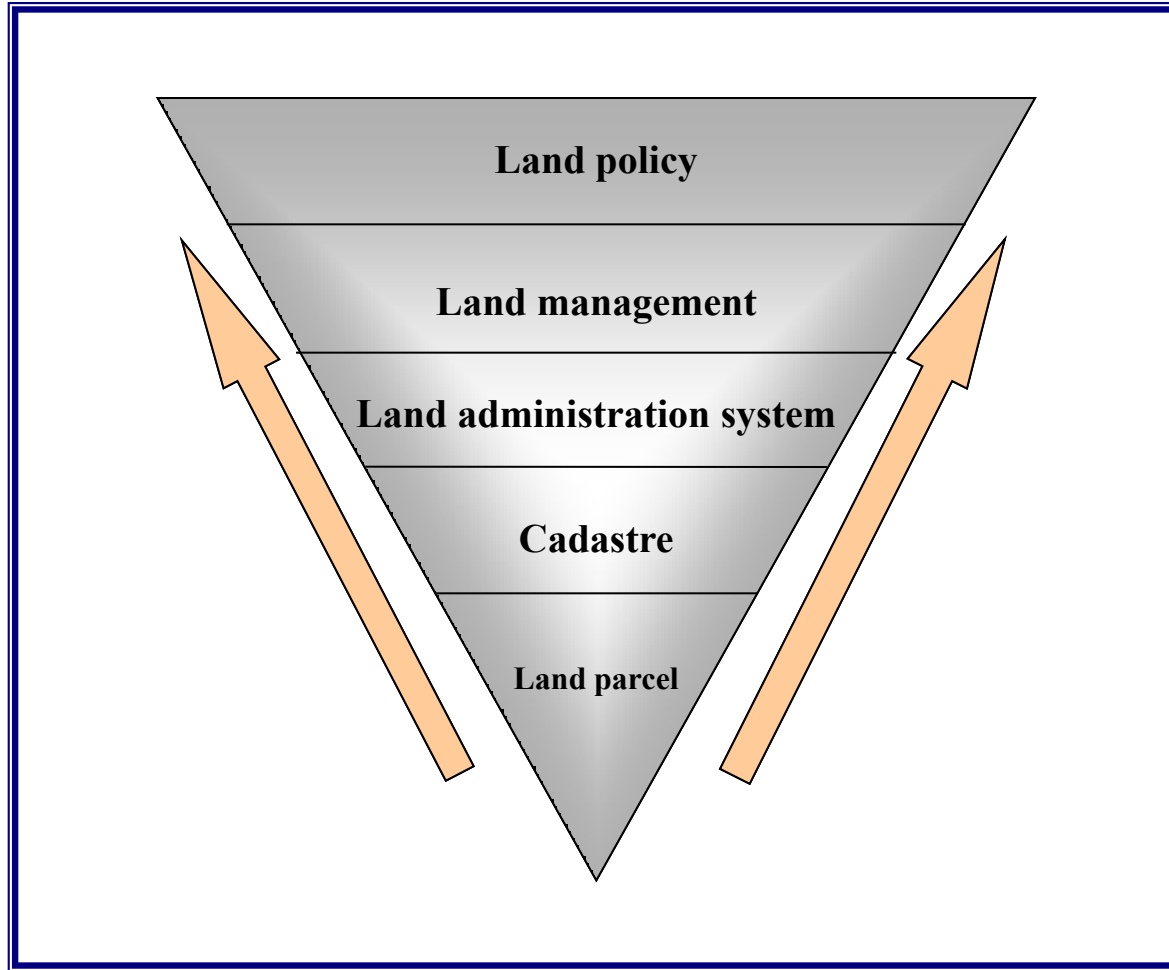

Three visions to support spatially enabled government as part of e-government

- A land management vision: incorporating spatially enabled land administration
- A spatial data infrastructure (SDI) vision: SDI as an enabling platform
- A vision for a spatially enabled society

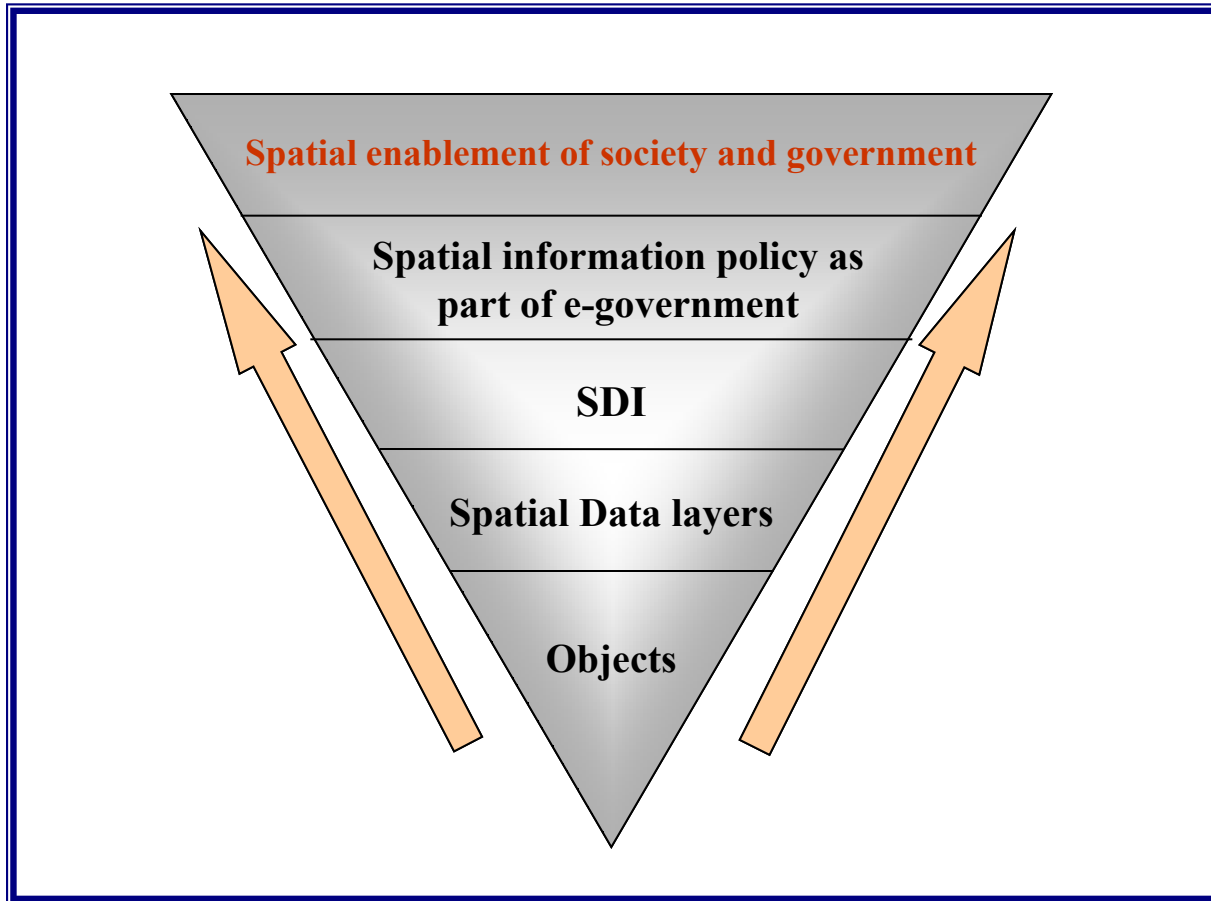

But first understand three fundamental concepts

- Land in society
- Spatial information in society
- Importance of integration of natural and built environment in delivering sustainable development

Land in Society

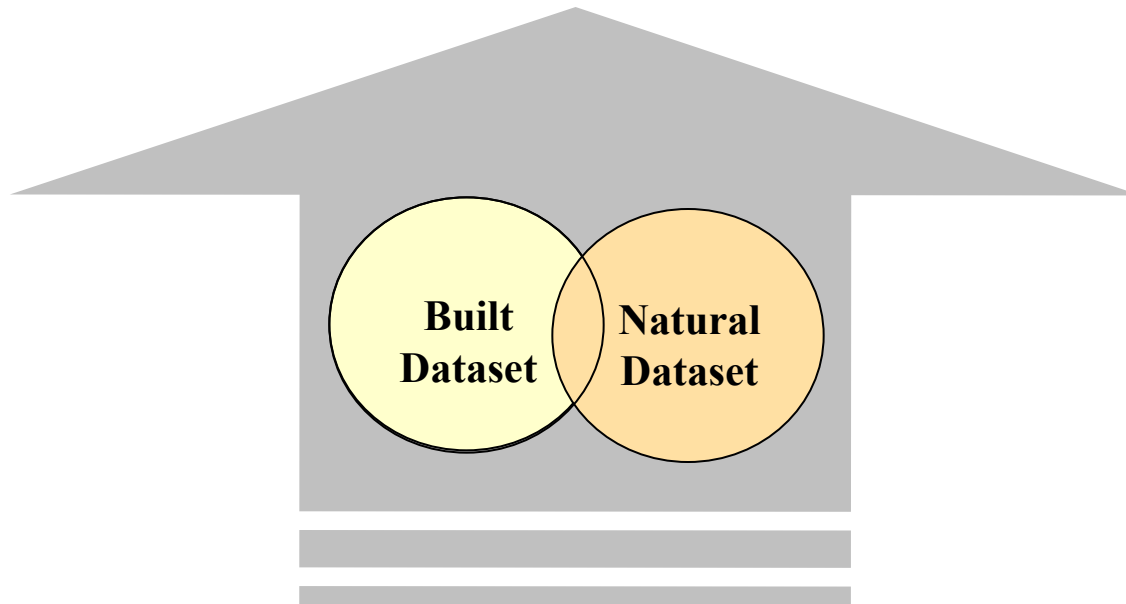

Spatial Information in Society

The challenge is the relationship between Built (cadastral) and Natural (topographic) Environmental Datasets

Sustainable Development

Vision of spatially enabled government

Governments are spatially enabled when -

Location is used to organise their
information

and

Location and spatial information are
common goods available to citizens and
businesses to encourage creativity and
product development.

Challenges and Issues for spatially enabled society

- SDI to facilitate spatially enabled government as part of an e-government strategy
- SDI to facilitate integration of natural and built environment datasets
- Development of SDI vision, mission and road map – where are we heading?
- Role of government, private and academic sectors
- Capacity building

Conclusion

- SDI is a new and evolving concept
- SDI development is multi-disciplinary with policy, legal, institutional and technical dimensions
- SDI will be a *virtual environment* supported by an *enabling platform* - spatially enabling society and government within an e-government environment
- Innovations in use of information will involve private and government sectors.
- Research is central to SDI development

5. GeoInfoStrategy- - Integral Component of Czech eGovernment

**Eva Kubatova, M. Rada, M. Konecny
Ministry of the Interior of the Czech Republic**

Content

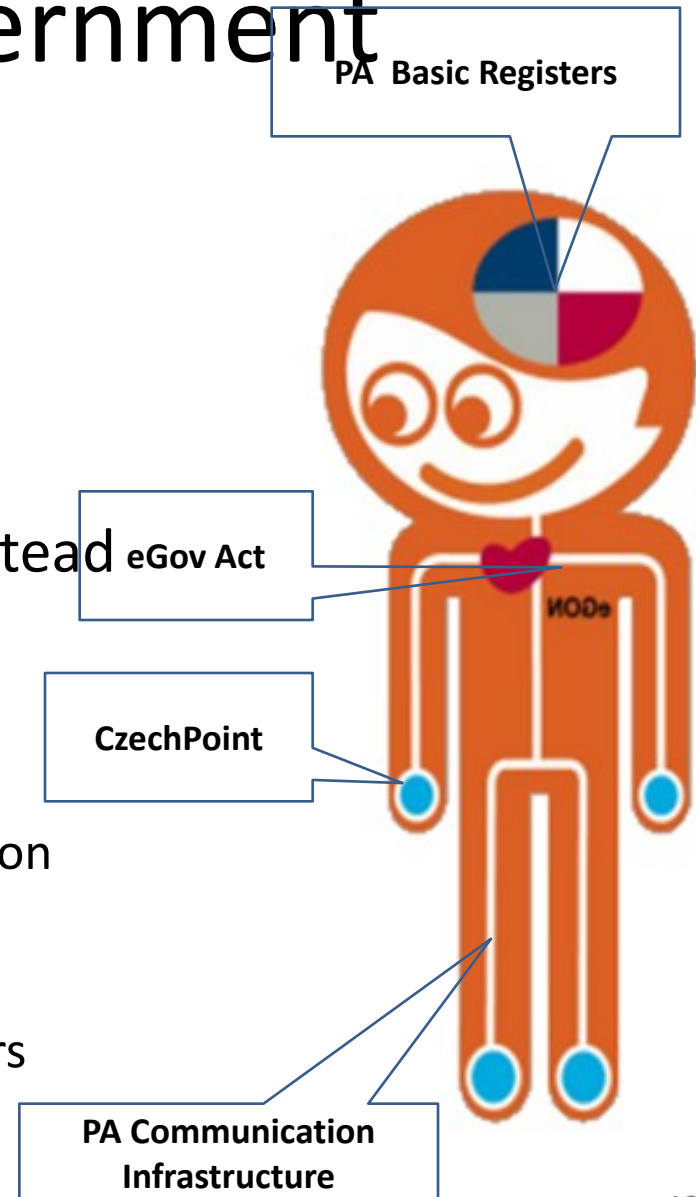

- Czech Mol Role in ICT
- Czech eGovernment
- System of PA Basic Registers - RUIAN
- Czech NSDI
- Towards Geoinformation Strategy
- Key PA Authorities Agreement
- GeoInfoStrategy
- Project of GeoInfoStrategy
- Conclusion

Czech Mol Role in ICT

- since 2007
 - central state administration body in charge of public administration information systems
 - coordination body for information and communication technologies
 - fundamental objectives
 - modernization of public administration
 - reaching an efficient public administration by use of ICT
- ✓ eGovernment

Czech eGovernment

- smart public administration
 - better laws
 - functional authorities
 - professional public servants
 - effective information technologies
- „the document has to circulate instead of the citizen“
- four measures
 1. Czech Point
 2. Public Administration Communication Infrastructure
 3. eGovernment Act (2008)
 4. Public Administration Basic Registers (2012)

Czech eGovernment Strategies

- Smart Administration (2007 – 2013)
 - definition of the process of Czech PA modernization and improving
 - by effective use of ICT
 - via provision of high-quality public services
- eGov 2014+ (2014 – 2020)
 - strategic framework for the development of public administration and eGovernment 2014+
 - modern PA is designed as **transparent** and **efficient** „service to the citizen“
 - the main principle is „**sharing**“ data and services

PA Basic Registers System

- Act No. 111/2009 Coll., on basic registers
- 4 basic registers of public administration
 - Register of Inhabitants (Mol)
 - Register of Corporations (Czech Statistical Office)
 - Register of Rights and Obligations (Mol)
 - 
- Basic Registers Information System (Mol)
- ORG (The Office for Personal Data Protection)
- fully operational in July 2012

RUIAN

- Basic Register of Territorial Identification, Addresses and Real Estates (RUIAN)
- content of RUIAN
 - administration units (country, regions, ...cadastral units, parcels, buildings)
 - entities of land administration (municipality districts, streets, ...)
 - addresses
 - location data (centroids of parcels, buildings, ...)
 - other data (building features, ...)
- no personal data
- the crucial pillar of the Czech NSDI
- administrated by Czech Office for Surveying, Mapping and Cadaster (COSMC)
- edited by Municipal and Building Authorities, Czech Statistical Office (CSO) and Local Cadastral Authorities

The Czech NSDI

- (reference) spatial data on territory (COSMC)
 - RUIAN
 - cadastral maps, state maps, Fundamental Base of Geographic Data, ...
- thematic spatial data (both public and private)
 - national INSPIRE infrastructure (MoE)
 - statistical spatial data (CSO)
 - spatial data on technical infrastructures
 - ...
- systematic, transparent and formal determination of the Czech NSDI is missing up to now
- lack of
 - coordination of PA authorities activities

National Geoinformation Strategy

Towards Geoinformation Strategy

Redefining the NSDI, towards Digital Agenda for Europe 2020

Eva Pauknerová¹, Eva Kubátová², Tomas Cajtham¹
¹Czech Office for Surveying, Mapping and Cadastre, Prague, the Czech Republic; ²Ministry of the Interior, Prague, the Czech Republic; ³Research Institute of Geodesy, Topography and Cartography, Prague, the Czech Republic

INTRODUCTION

Ten years ago, the "National Geo-Information Infrastructure of the Czech Republic" (NGII) was founded by the Nemoforum Association and approved as a 5-year program document linked to the State Information Policy. The past decade was full of changes (technological, political, economic etc.), which affected the original NGII plans.

1991 - 2000

In December 2010, the Nemoforum therefore initiated to map and analyze the NGII development and results, and to outline an updated NGII. Some preliminary results are presented here.

Four 5-year periods were differentiated plus the preparatory decade. Milestones related to the NGII development were specified based on the survey done in 2011. It included review of documents on NGII, INSPIRE, and SDI, and eGovernment; interviews and questionnaires were used.

The European Interoperability Framework (EIF) published by the EC in December 2010 provides a useful perspective and conceptual model to describe any ICT supported public services.

It helps describing a complex spatial data infrastructure, too. The interoperability initiatives defined by EIF (strategy, framework, guidelines, service tools) visualized in a triangle are used here to characterize the periods. The changing colors symbolize the strength or weakness of each NGII phase.

2011 - 2015

The NGII survey and related discussions realized in the Czech Republic in the first half of 2011 provided a useful overview and feedback. Several factors influencing growth or decline of an information infrastructure were identified and illustrated. Their dynamics were recognized and solutions can be better understood now. It became obvious that despite a continuous progress related to specified components of a SDI, there are numbers of strong external inputs caused by political changes, new communication tools and trends or natural disasters. Regular updates and strategy updates are needed every 5 years.

The phases of reorganizing the ups and downs of the first decade of the Czech NGII has met the initial phase of the Digital Agenda for Europe 2010 and the new framework vision to enhance interoperability for European Public Services (EPS). This momentum provides a chance to combine:

- the lessons learned and adopted at the national level;

CONCLUSIONS

The INSPIRE legal framework specifying most building blocks of a GI infrastructure, the new political vision for the second decade of the 3rd millennium, which might help to bridge the gap between INSPIRE and eGovernment, and the updated EIF with its conceptual model for public services enabling to describe their busy interrelations in a clear but sophisticated way, and building on four interoperability levels (legal, organizational, semantic and technical).

Interdependencies and Dynamics of the NGII Development Process

Relations and Gaps between selected thematic domains and their services

Having these tools and knowledge now opens a unique opportunity to re-define the NGII in a way which might overcome some existing challenges of setting INSPIRE into the public services in practice. Consequently, the redefined NGII can contribute to realize the aims and tasks of the Digital Agenda for Europe 2010.

- first analysis of NSDI in 2001 (Nemoforum)
- then the Ministry of Informatics tried hard to go on but with no success
- first turning point was 2007
 - INSPIRE adoption
 - MoI assumed the responsibility for ICT
- INSPIRE transposition in the course of 2007 and 2009

INSPIRE

- INSPIRE transposition and implementation is in responsibility of Ministry of the Environment (MoE)

MINISTERSTVO ŽIVOTNÍHO PROSTŘEDÍ
Ministry of the Environment of the Czech Republic

- transposition was executed by updating of Act No. 123/1998 Coll., on right of environmental information

- www.geoportal.gov.cz

- INSPIRE coordination body (KOVIN)

- INSPIRE becomes real MoI inspiration in the way towards national geoinformation strategy

Key PA Authorities Agreement

- after election in 2010 unstable political situation
- second key point in mid-2012
- agreement on cooperation in the process of national geoinformation strategy drawing up
 - under Mol coordination
 - without any public money

MINISTERSTVO VNITRA
ČESKÉ REPUBLIKY

MINISTERSTVO ŽIVOTNÍHO PROSTŘEDÍ
Ministry of the Environment of the Czech Republic

MINISTERSTVO
PRO MÍSTNÍ
ROZVOJ ČR

- Minister of the Interior submitted the joint proposal for Czech Government s approval in October 2012

GeoInfoStrategy

- Czech Government
 - approved the proposal of working out of the „*Strategy of spatial information infrastructure development in the Czech Republic up to 2020*“ (GeoInfoStrategy) by Resolution No. 837 on the 14th November 2012
 - ordered to submit the GeoInfoStrategy draft for approval to the end of February 2014
 - ordered to cooperate to all central state administration bodies
 - recommend to cooperate to regions and cities

GeoInfoStrategy Main Goals

- to set up effective coordination and integration of public bodies and commercial sector activities in the field of spatial data
- to help to set up conditions for
 - major improvement of eGovernment services regarding spatial data
 - reduction of costs of public administration
 - enhancing of the overall competitiveness of the Czech economy

GeoInfoStrategy Inspiration

- European
 - INSPIRE
 - existing geoinformation strategies (Wales, Netherland, Sweden, Nothern Ireland...)
- National
 - development eGovernment strategy
 - INPIRE Implementation Strategy
 - existing departmental development strategies
 - points of view of
 - relevant PA bodies
 - professional associations
 - ...

GeoInfoStrategy Content

Implementation Plan

- description of NSDI current state, list of key problems and analysis of their causes
- setting up target state that contains clear priorities and measurable goals (SMART)
- proposal of concrete arrangements and tasks to reaching target state
 - Legislative and organization arrangements
 - Arrangement administrators
 - Time schedule of future tasks performance
 - Costs and Benefits of the arrangement realization
- specification of roles of relevant PA bodies and user groups
- institutional designation of suitable coordination structure

Project of GeoInfoStrategy

- project GeoInfoStrategy has been set up
 - Administrator is Mol
 - Managing Committee (COSMD, MoE, MoLD, MoD, MoT)
 - Processing Team (experts from PA and academic sphere)
 - Consulting Team (PA bodies, professional associations (Nemoforum, CAGI, ..., universities)
 - Working Groups
- <http://www.geoinfostrategie.gov.cz>
- geoinfostrategie@mvcz.cz

Project Rough Time Framework

Period	Phase
01 – 02 / 2013	Project Setting up
03 – 05 / 2013	Analytic and Prognostic Phase
06 / 2013	Vision, Global Goal and Strategic Goals Proposal
07 – 11/2013	Start of working on GeoInfoStrategy Draft
12 / 2013	Proposal of Implementation Plan
01 – 02 / 2014	Consulting of the GeoInfoStrategy Draft

GeoInfoStrategy – Where we are

- Working and Organisational Plan is approved by Managing Committee
- work in compliance with Cooperation and Communication Plan (workshops, presentations, articles in specialized magazines, ...)
- collection of
 - information for analysis
 - impulses for proposal
- worked out
 - document structure
 - vision and global goal
 - strategic and specific goals

6. Conclusion

– important is

- intention to work out the national geoinformation strategy (GeoInfoStrategy) has governmental support
 - Governmental Resolution No. 837/2012
- future GeoInfoStrategie is seen as the eGov 2014 + subsequent strategy
 - GeoInfoStrategy is going to be an integral component of Czech eGovernment
- Czech Republic makes efforts to
 - coordinate national geoactivities
 - activate huge spatial data economic potencial

Thanks for your attention!
