

# Population Ecology of Animals

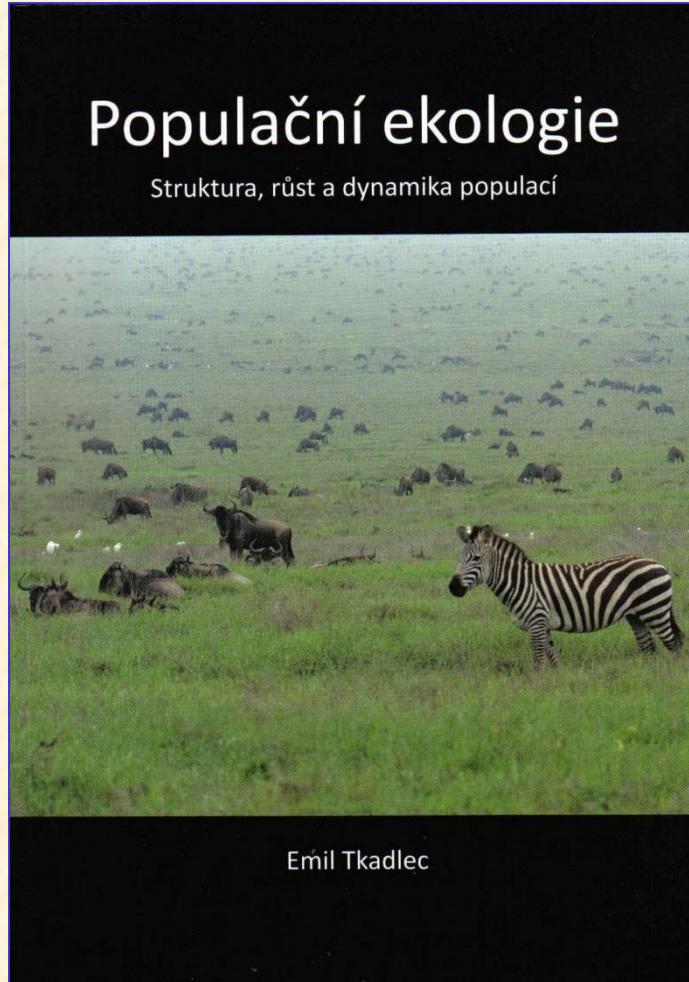

“Populační ekologie živočichů“

Stano Pekár

# Content

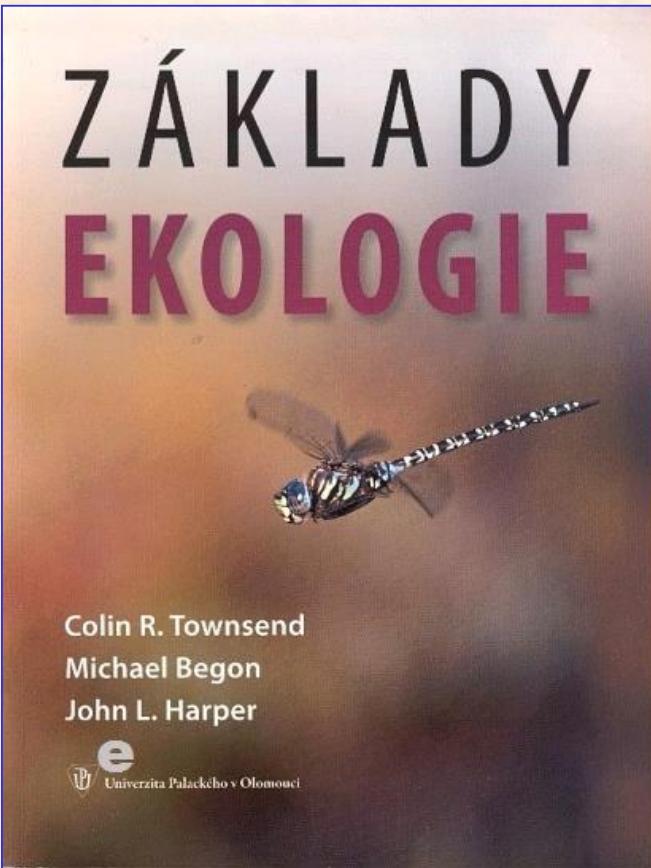

- Population ecology (Resources, Conditions, Models)
- Population growth (Population censuses)
- Population structure (Stage/Age life-tables, k-factor analysis)
- Temperature models (Degree-days)
- Intraspecific competition (Harvesting, Allee effect)
- Spatial ecology (Distribution, Dispersal, Metapopulations)
- Interspecific competition (Mutualism)
- Predation (Functional and numerical responses)
- Predation models (Host-pathogen/parasite, Prey-predator, Host-parasitoid, Plant-herbivore)

# Presentations

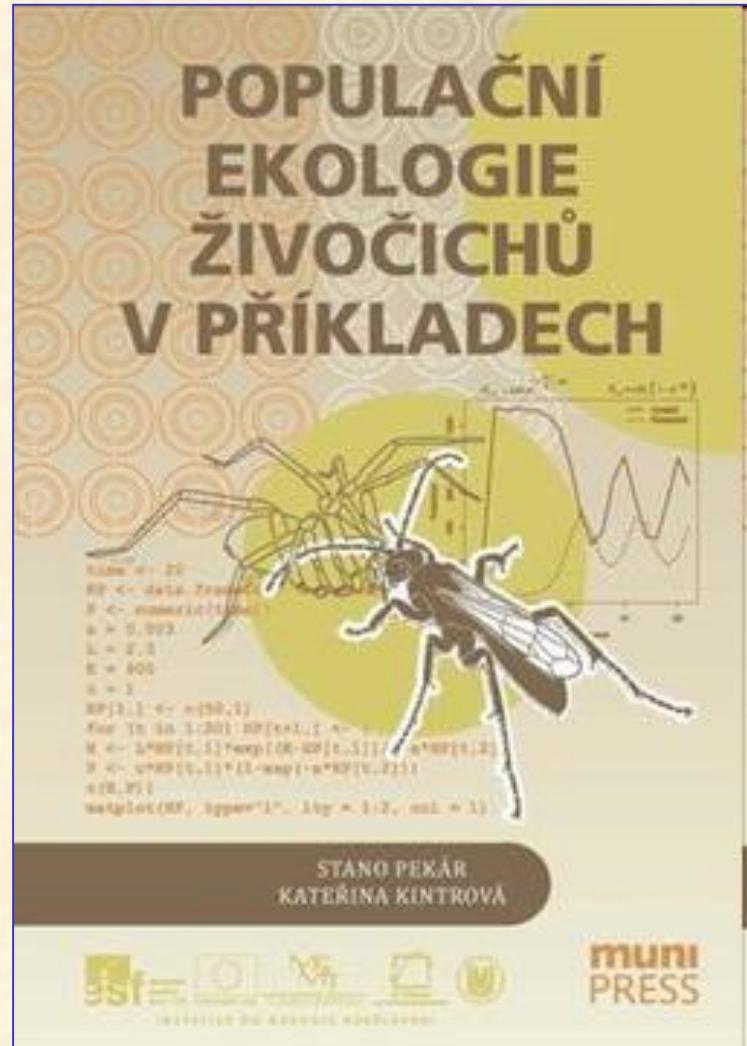

No.	Topics	Date
1.	Adaptation, fitness and phenotypic plasticity	
2.	Abundance and cycles	6.10.
3.	Evolution of sex, sex determination	
4.	Sex ratio	
5.	r- and K- selection	13.10.
6.	Geographic variability (temperature, physiological time)	27.10.
7.	Intraspecific competition	3.11.
8.	Management of endangered species, Regulation of pests	3.11.
9.	Sustainable harvesting	
10.	Cooperation, Allee effect	10.11.
11.	Dispersal and movement	10.11.
12.	Dormancy, navigation, and migration	24.11.
13.	Interspecific competition, competitive exclusion principle, apparent competition	24.11.
14.	Niche and coexistence (storage effect, heteromyopy, resource partitioning)	1.12.
15.	Amensalism, comensalism, mutualism	1.12.
16.	Defence against predators (crypsis, mimicry)	8.12.
17.	True predators, parasitoids, and host manipulation	8.12.
18.	Herbivores, Parasites and pathogens	

# Projects

1. Interspecific competition – laboratory, *Tribolium* & *Oryzaephilus* beetles
2. Functional response – field/laboratory, *Pardosa* spiders & *Drosophila* flies
3. Temperature-dependent development – laboratory, *Drosophila* flies
4. Population dynamics – laboratory, *Sinella* springtails

# Homework

Study chapters 1 & 2 and the description of a selected project

Pekár S. & Kintrová K. 2013. Populační ekologie živočichů v příkladech. MU Brno.
