Table 26-1 Differences Between Rods and Cones and Their Neural Systems

Rods

- High sensitivity to light, specialized for night vision
- More photopigment, capture more light
- High amplification, single photon detection
- Low temporal resolution: slow response, long integration time
- More sensitive to scattered light

Rod system

- Low acuity: not present in central fovea, highly convergent retinal pathways
- Achromatic: one type of rod pigment

Cones

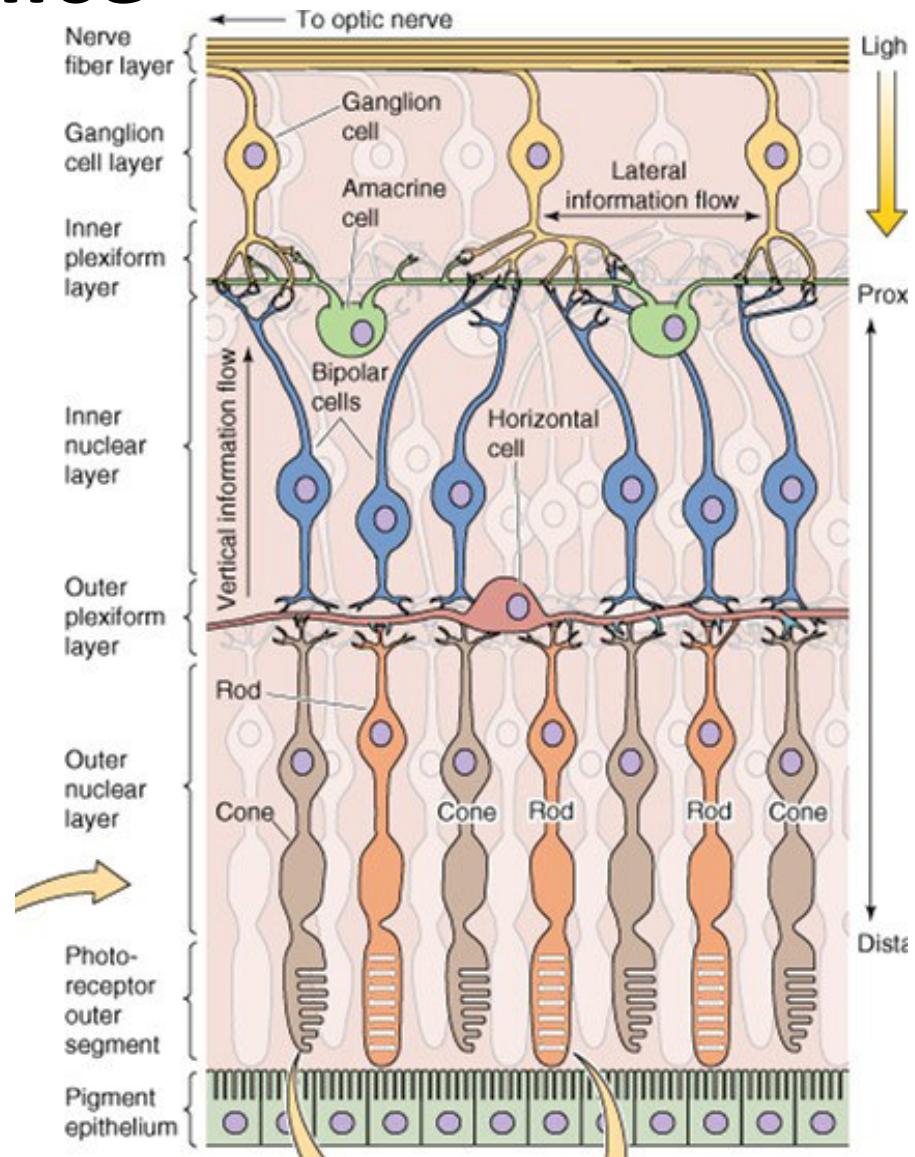

- Lower sensitivity, specialized for day vision
- Less photopigment
- Lower amplification
- High temporal resolution: fast response, short integration time
- Most sensitive to direct axial rays

Cone system

- High acuity: concentrated in fovea, dispersed retinal pathways
- Chromatic: three types of cones, each with a distinct pigment that is most sensitive to a different part of the visible light spectrum

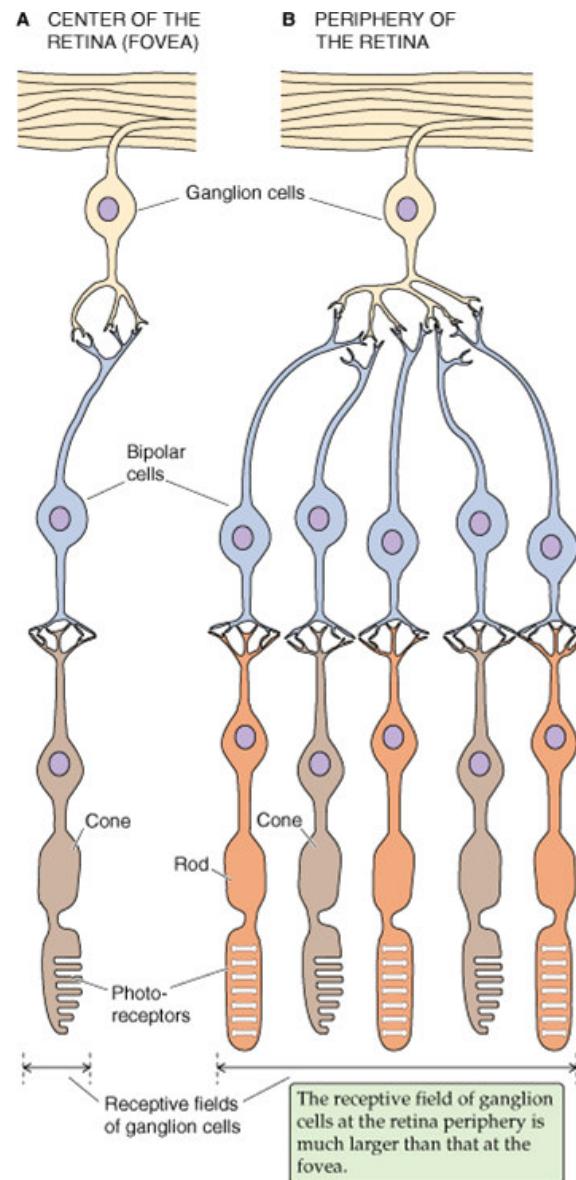

Sítnice

- Fotoreceptory
- Interneurony
 - Horizontální buňky
 - Horizontální propojení
 - Bipolární buňky
 - Vertikální propojení
 - Amakrinní buňky
 - Horizontální i vertikální propojení
- Ganglionové buňky
 - Tvorba AP
 - Transmise AP do mozku

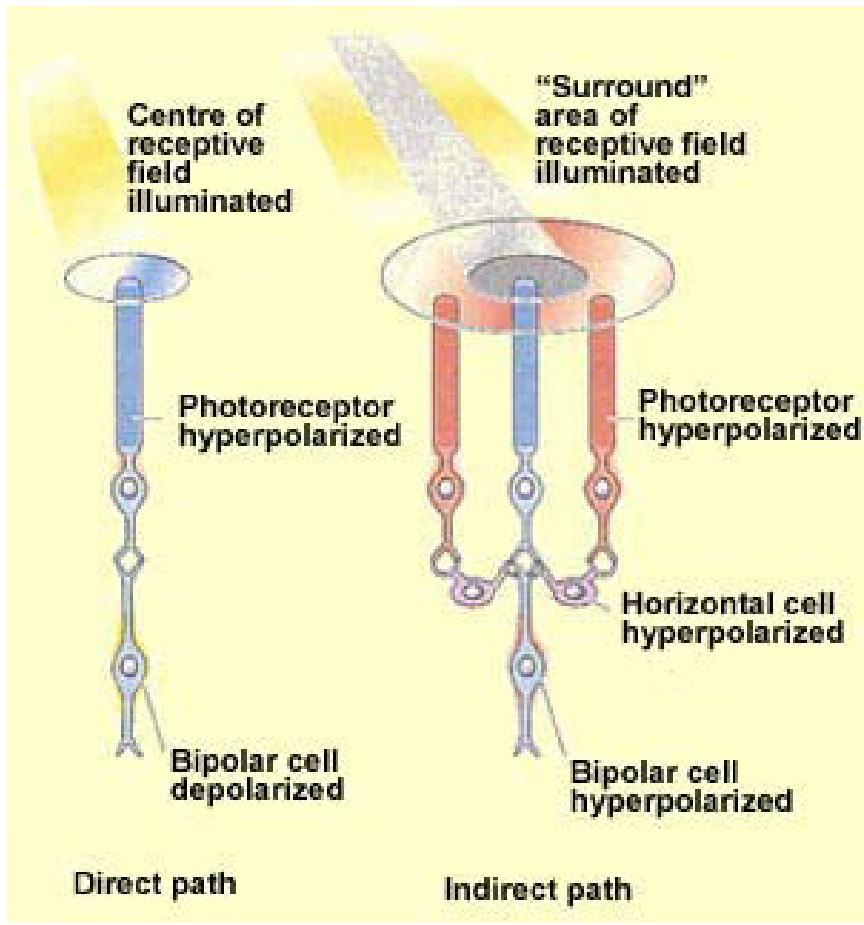

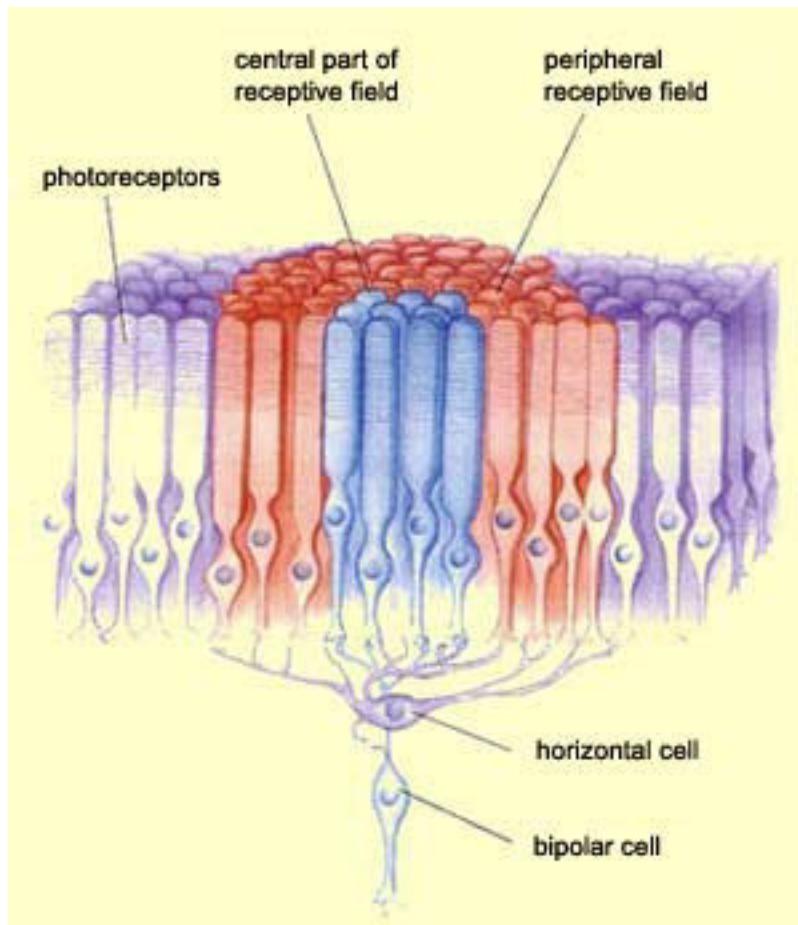

Sítnice

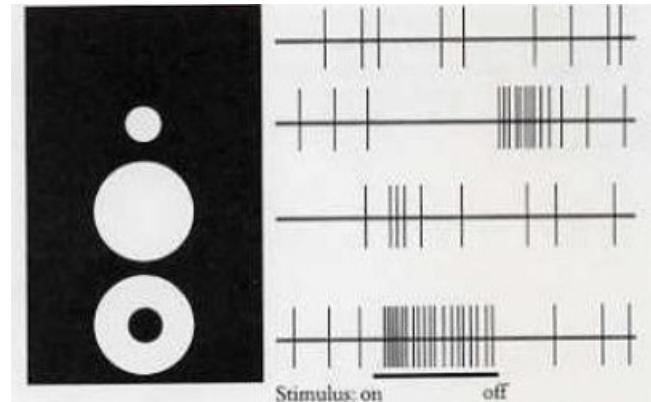

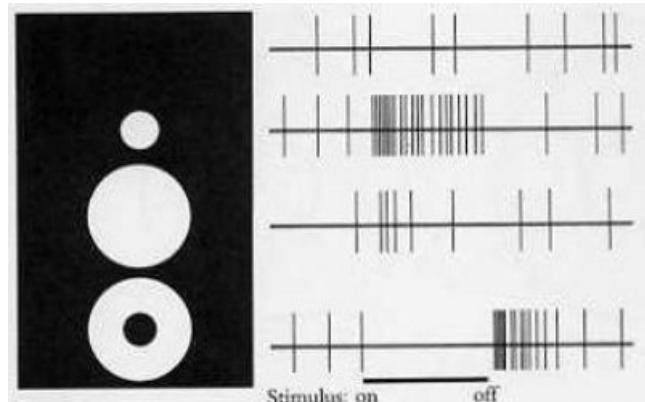

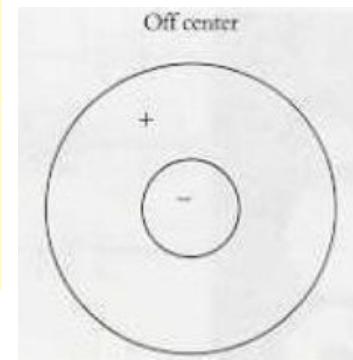

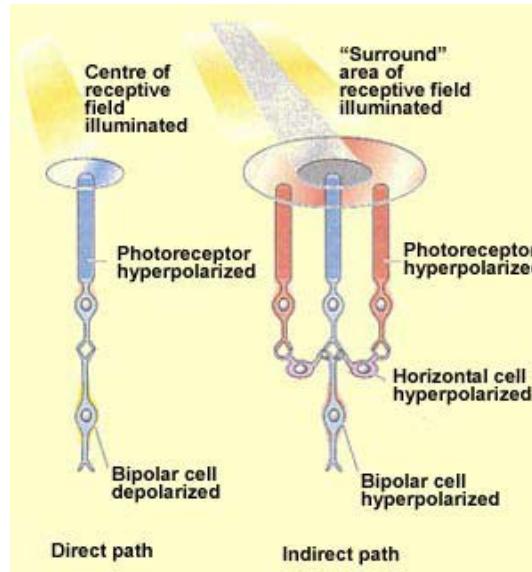

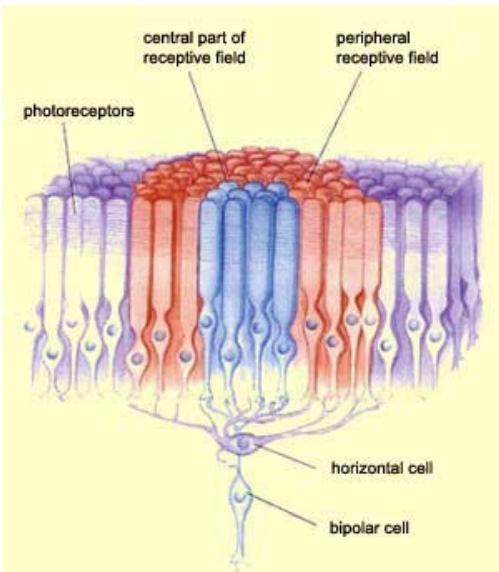

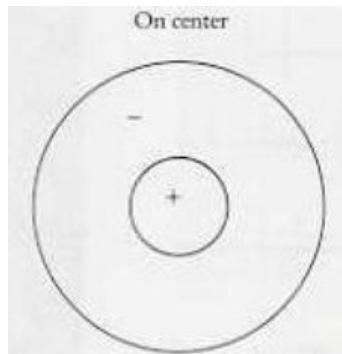

- Fovea
 - Malá konvergence signálu
 - Malé receptivní pole
 - Vysoké rozlišení
 - Malá senzitivita ke světlu
- Periferie sítnice
 - Velká konvergence signálu
 - Velké receptivní pole
 - Nízké rozlišení
 - Vysoká senzitivita ke světlu

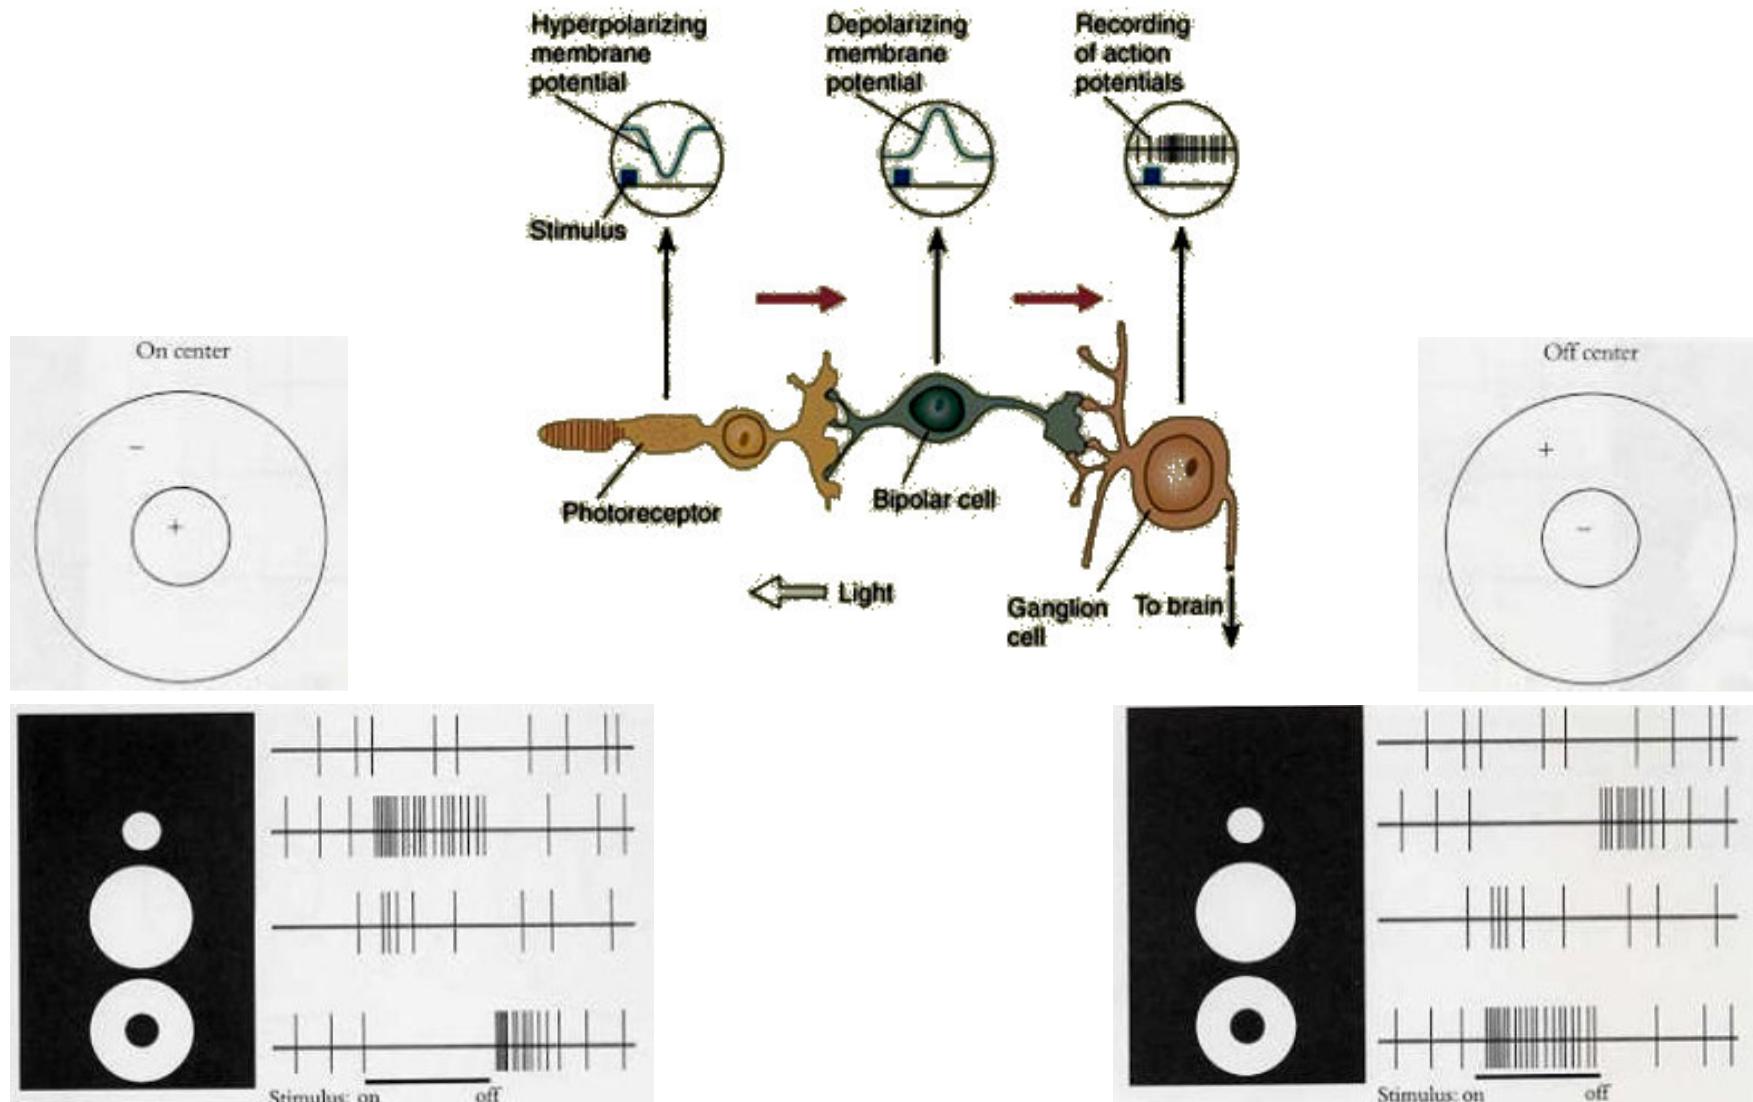

Receptivní pole

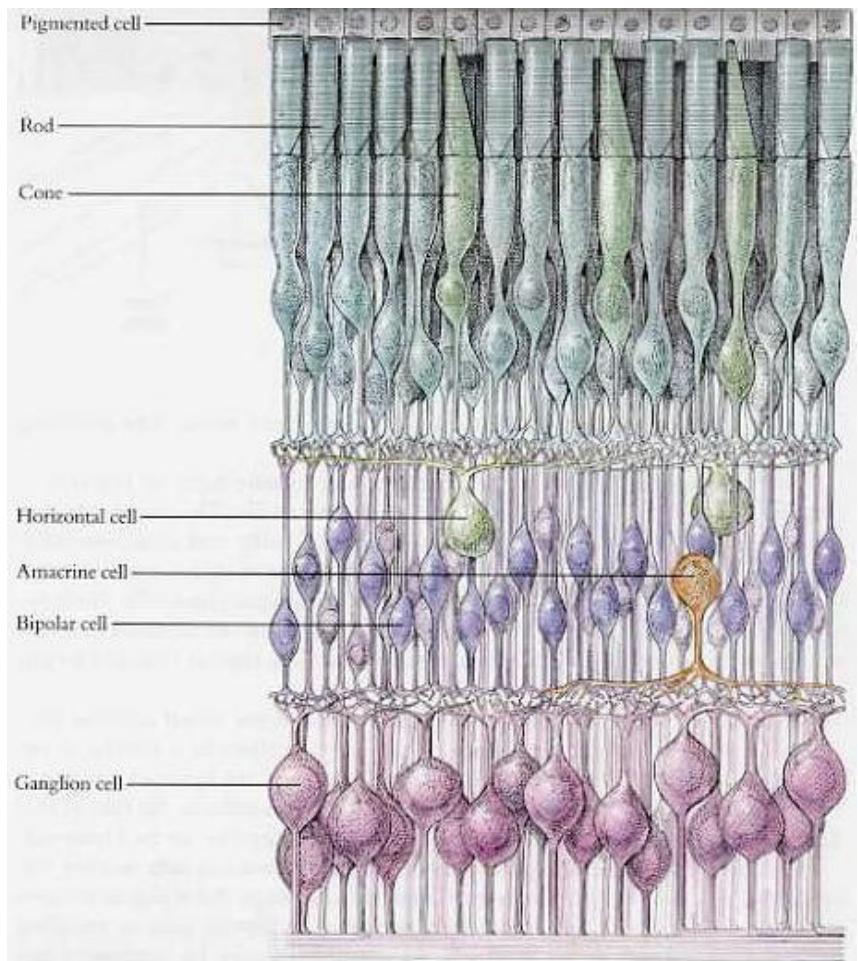

Receptivní pole

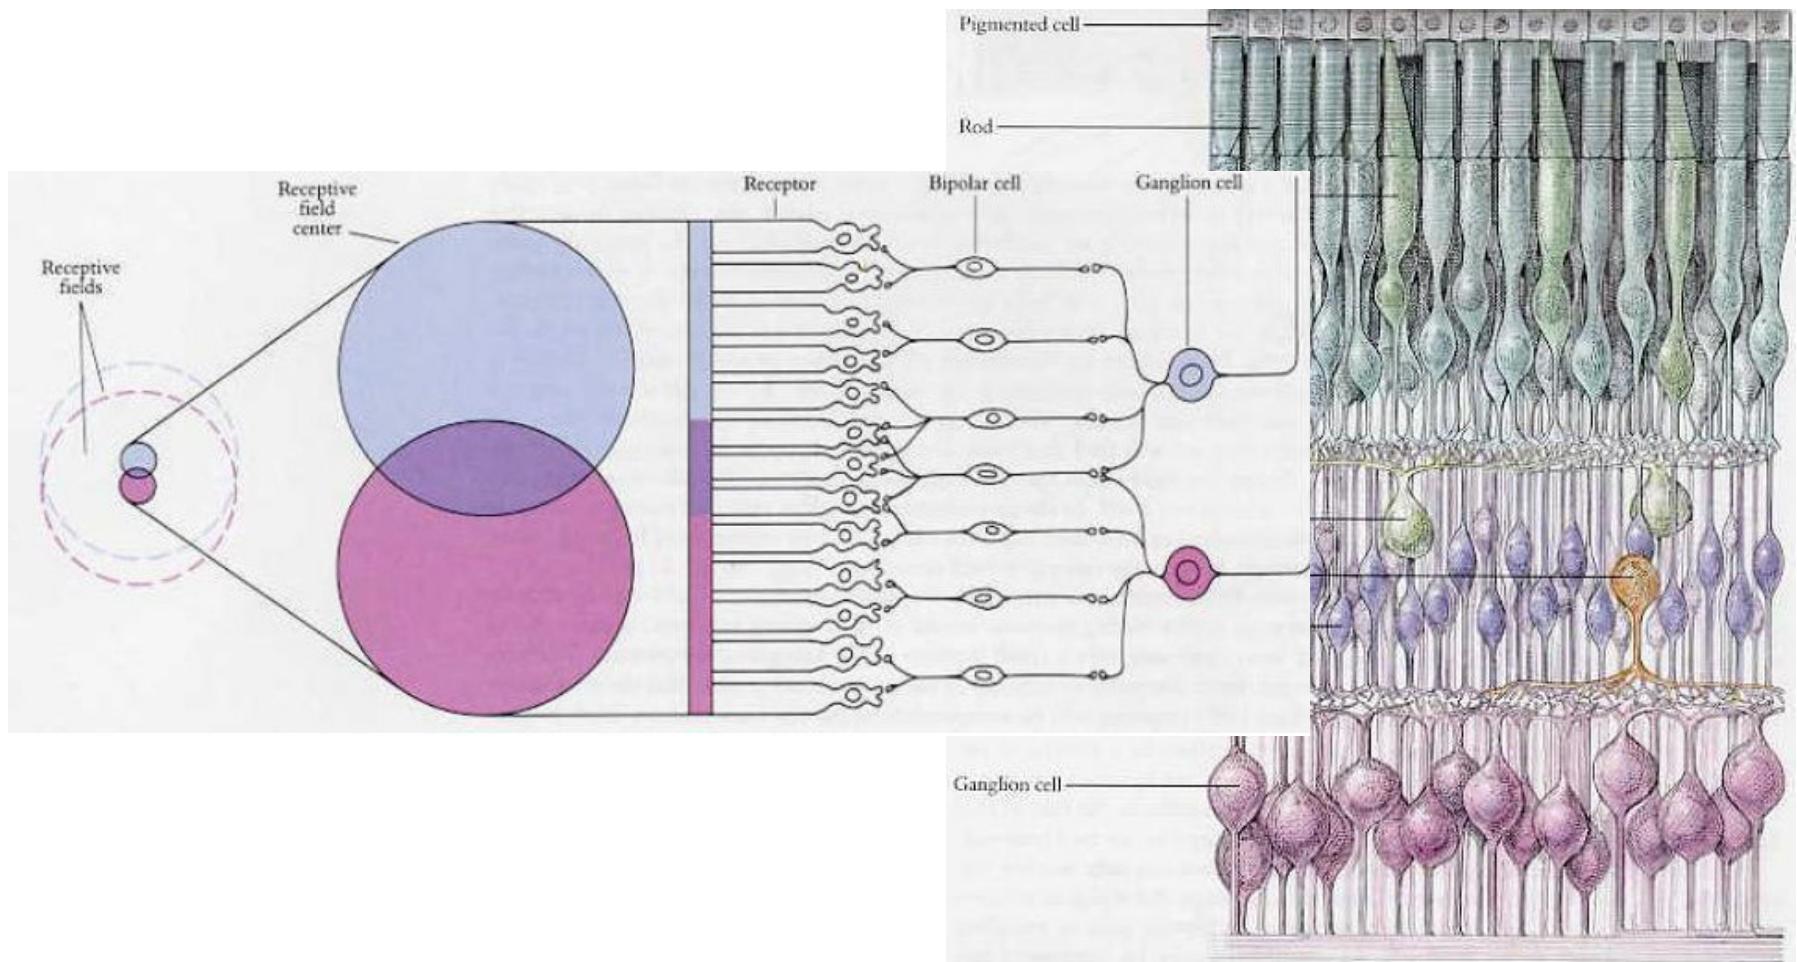

Receptivní pole

Receptivní pole

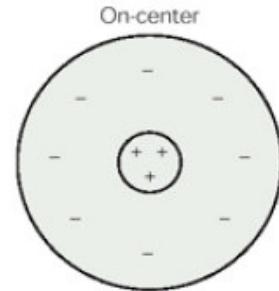

Receptivní pole

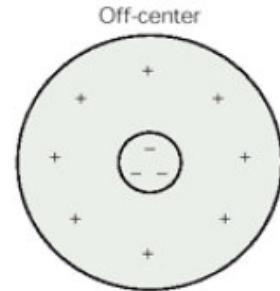

Receptivní pole

- Magnocelulární systém
 - Velká receptivní pole
 - Tyčinky i čípky
 - **M ganglionové buňky (10%)**
 - Vysoká rychlosť vedení
 - Dobrá senzitivita na jas/nízký kontrast
 - Minimální senzitivita na barvu

A M cells

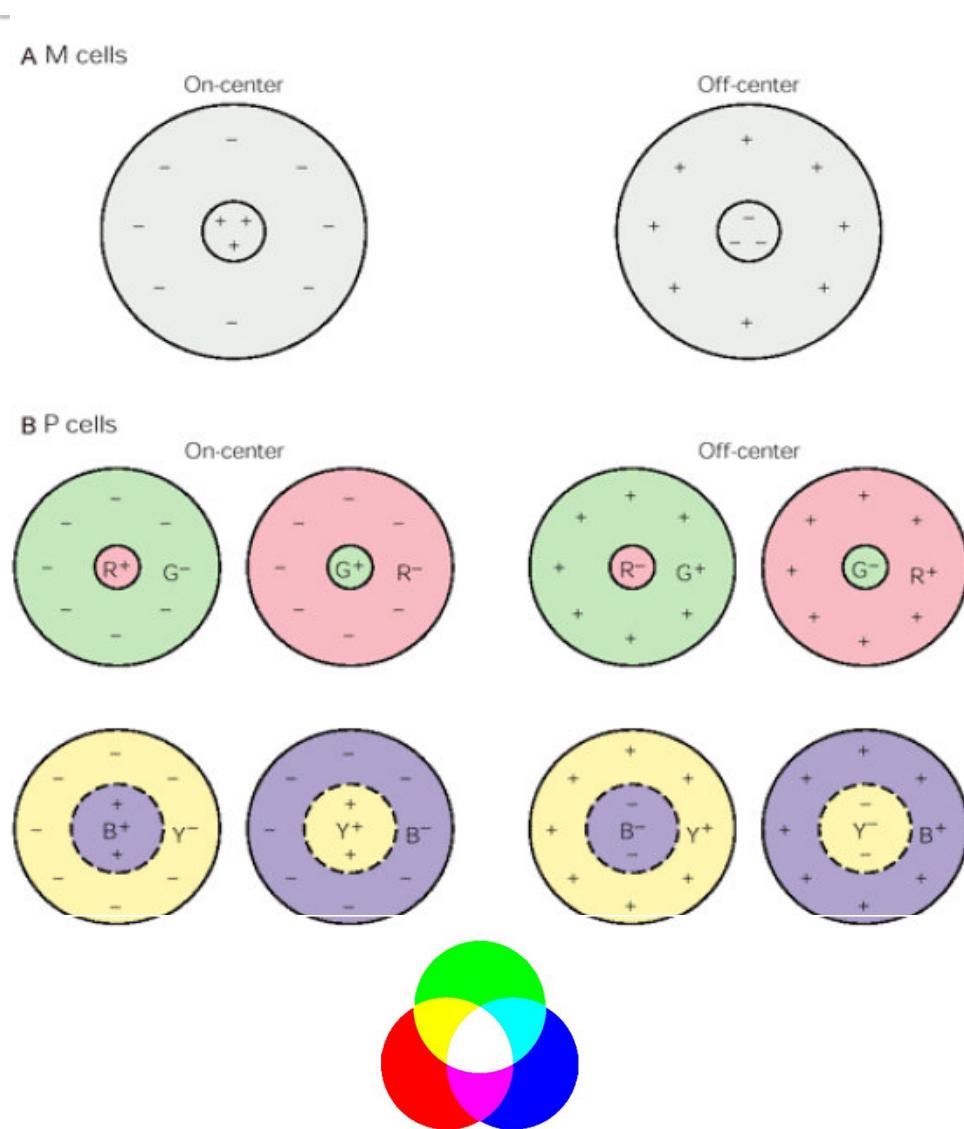

Off-center

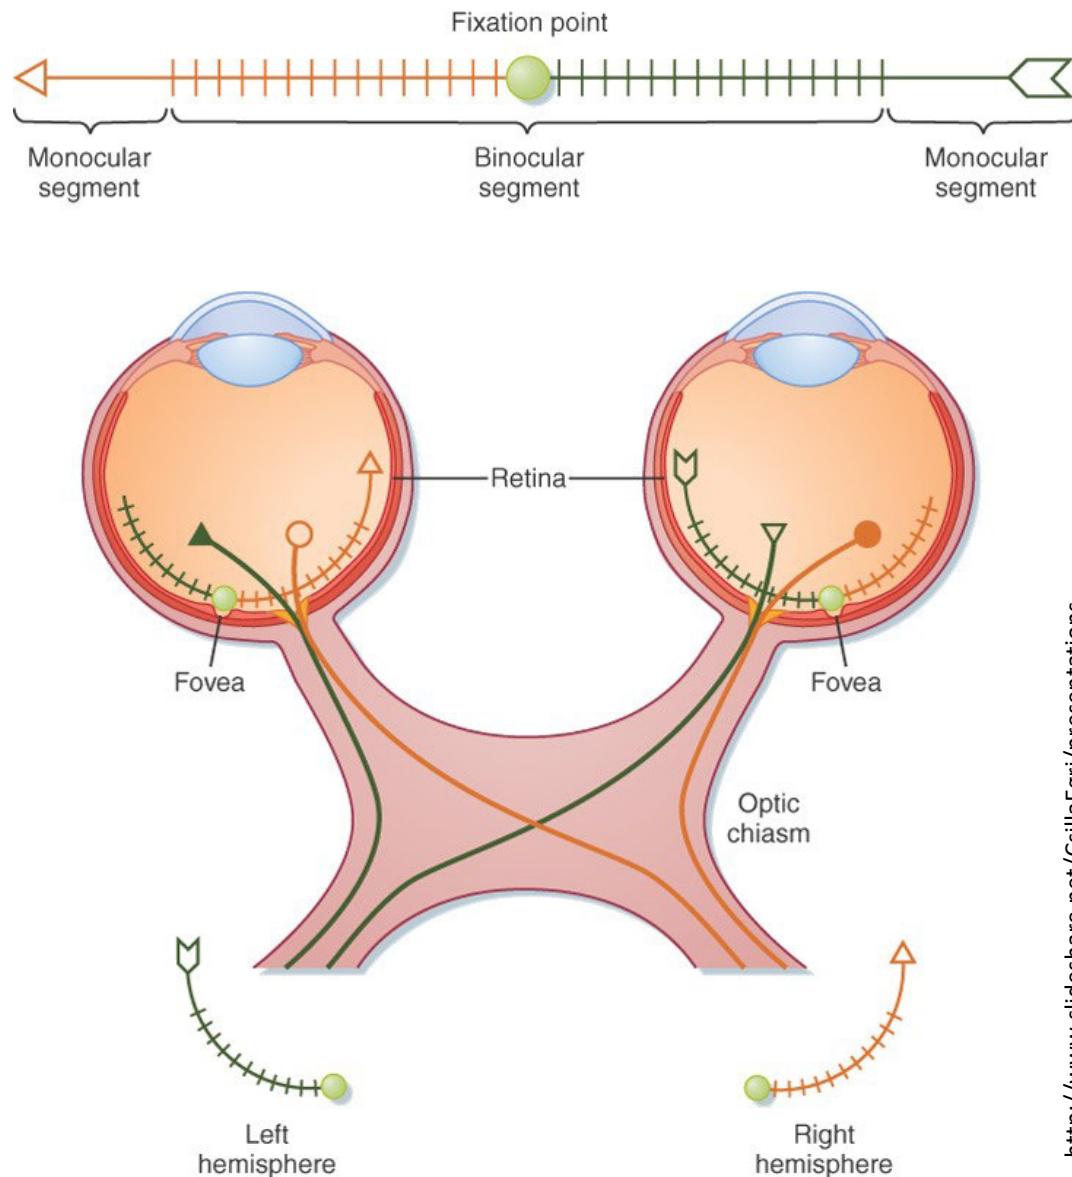

Receptivní pole

- Magnocelulární systém
 - Velká receptivní pole
 - Tyčinky i čípky
 - **M ganglionové buňky (10%)**
 - Vysoká rychlosť vedení
 - Dobrá senzitivita na jas/nízký kontrast
 - Minimální senzitivita na barvu
- Parvocelulární systém
 - Malá receptivní pole
 - Čípky i tyčinky
 - **P ganglionové buňky (80%)**
 - Pomalá rychlosť vedení
 - Špatná senzitivita na nízký kontrast
 - Dobrá senzitivita na barvu

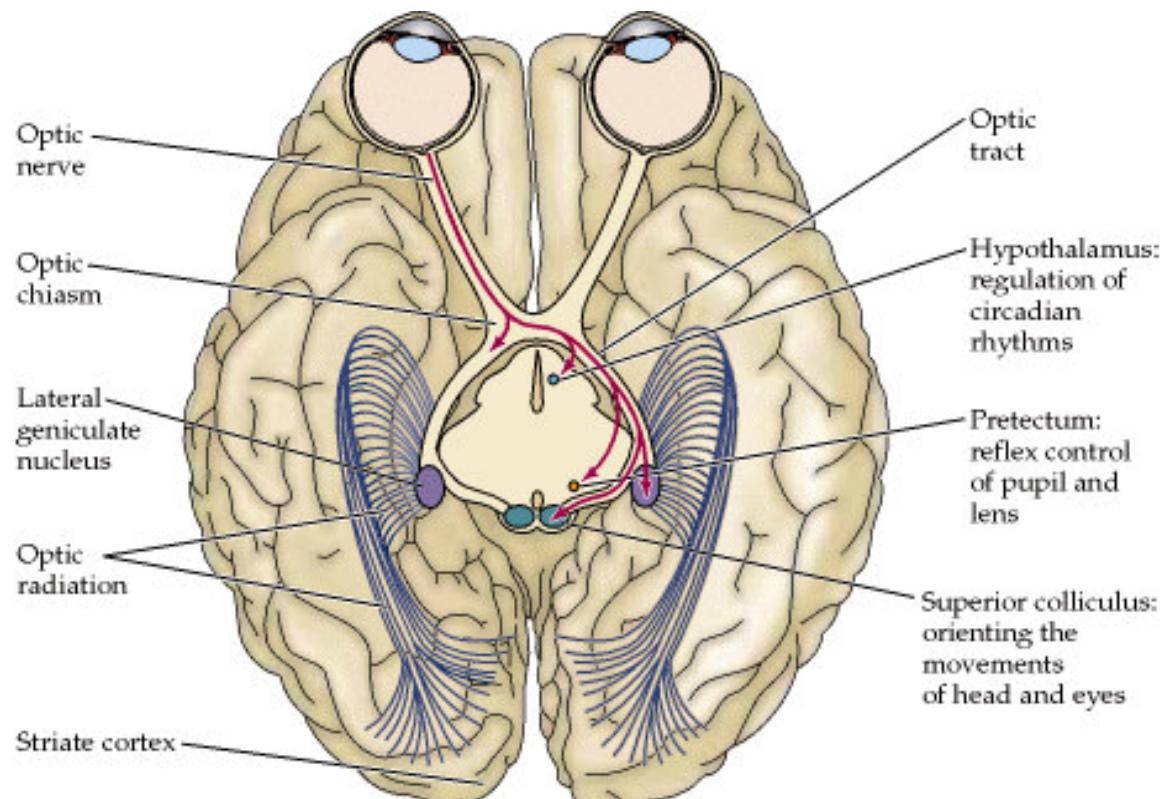

Nervus opticus a tractus opticus

- Nervus opticus
 - Informace z jednoho oka
 - Informace z „celého“ zorného pole
- Tractus opticus
 - Informace z obou očí
 - Informace z poloviny zorného pole

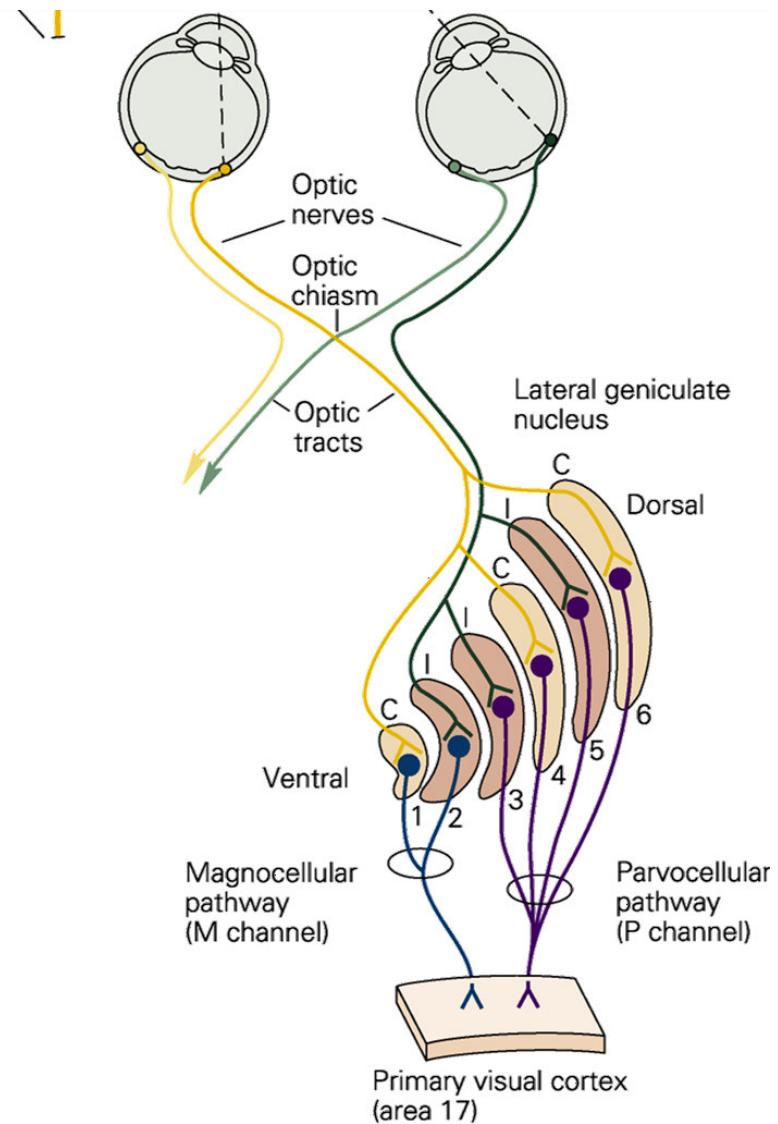

Zraková dráha

- Nucleus corporis geniculati lateralis
 - Thalamus
 - Většina signálu
 - Dále cestou radiation optica do neokortexu
- Hypothalamus
 - Regulace cirkadiální aktivity
- Prepectum
 - Pupilární reflex
- Colliculi superiores
 - Reflexní pohyby očí a hlavy

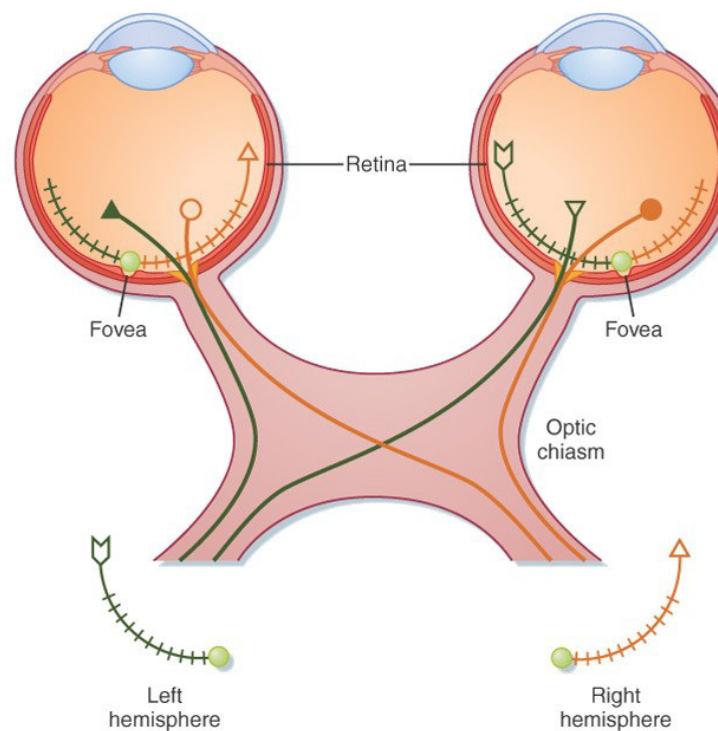

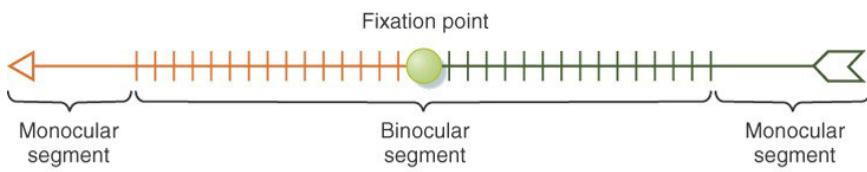

Nucleus corporis geniculati lateralis

- Šest jaderných vrstev
- Retinotopická organizace
- Každá vrstva dostává informace pouze z jednoho oka
- Vrstva 1-2
 - Magnocelulární systém
 - M ganglionové buňky
 - Velká receptivní pole / reakce na jas
 - Informace o lokalizaci a pohybu
- Vrstva 3-6
 - Parvocelulární systém
 - P ganglionové buňky
 - Malá receptivní pole / reakce na barvu
 - Informace o tvaru a barvě

Nystagmus

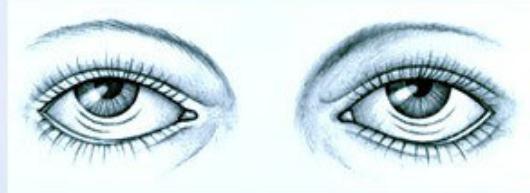

- Nekontrolované rytmické konjugované pohyby očních bulbů
- Fyziologický
 - Postrotační
 - Optokinetický
- Patologický
 - Poruchy vestibulárního systému
 - Poruchy vestibulocerebella
 - Další poruchy CNS

Classifying nystagmus

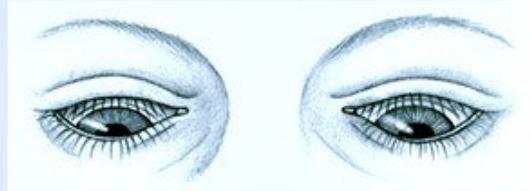

The various types of jerk and pendular nystagmus are illustrated below.

JERK NYSTAGMUS

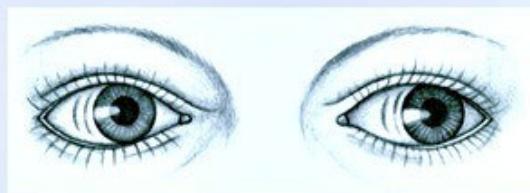

Convergence-retraction nystagmus refers to the irregular jerking of the eyes back into the orbit during upward gaze. It can indicate midbrain tegmental damage.

Downbeat nystagmus refers to the irregular downward jerking of the eyes during downward gaze. It can signal lower medullary damage.

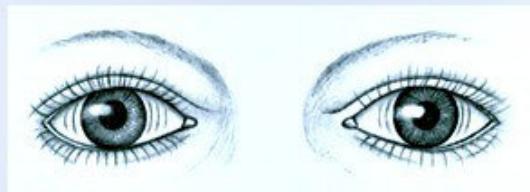

Vestibular nystagmus, the horizontal or rotary movement of the eyes, suggests vestibular disease or cochlear dysfunction.

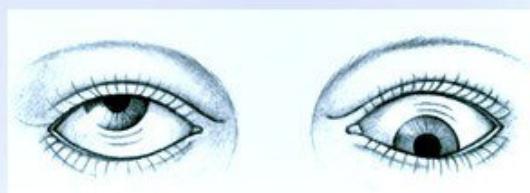

PENDULAR NYSTAGMUS

Horizontal, or pendular, nystagmus refers to oscillations of equal velocity around a center point. It can indicate congenital loss of visual acuity or multiple sclerosis.

Vertical, or seesaw, nystagmus is the rapid, seesaw movement of the eyes: One eye appears to rise while the other appears to fall. It suggests an optic chiasm lesion.

Pupilární reflex
