we ought to prefer the judgments of those who “know what they are talking about”

to treat expertise as real and substantive is to treat it as something other than relational. Relational approaches take expertise to be a matter of experts’ relations with others. The notion that expertise is only an “attribution”—the, often retrospective, assignment of a label—is an example of a relational theory. The realist approach adopted here is different.

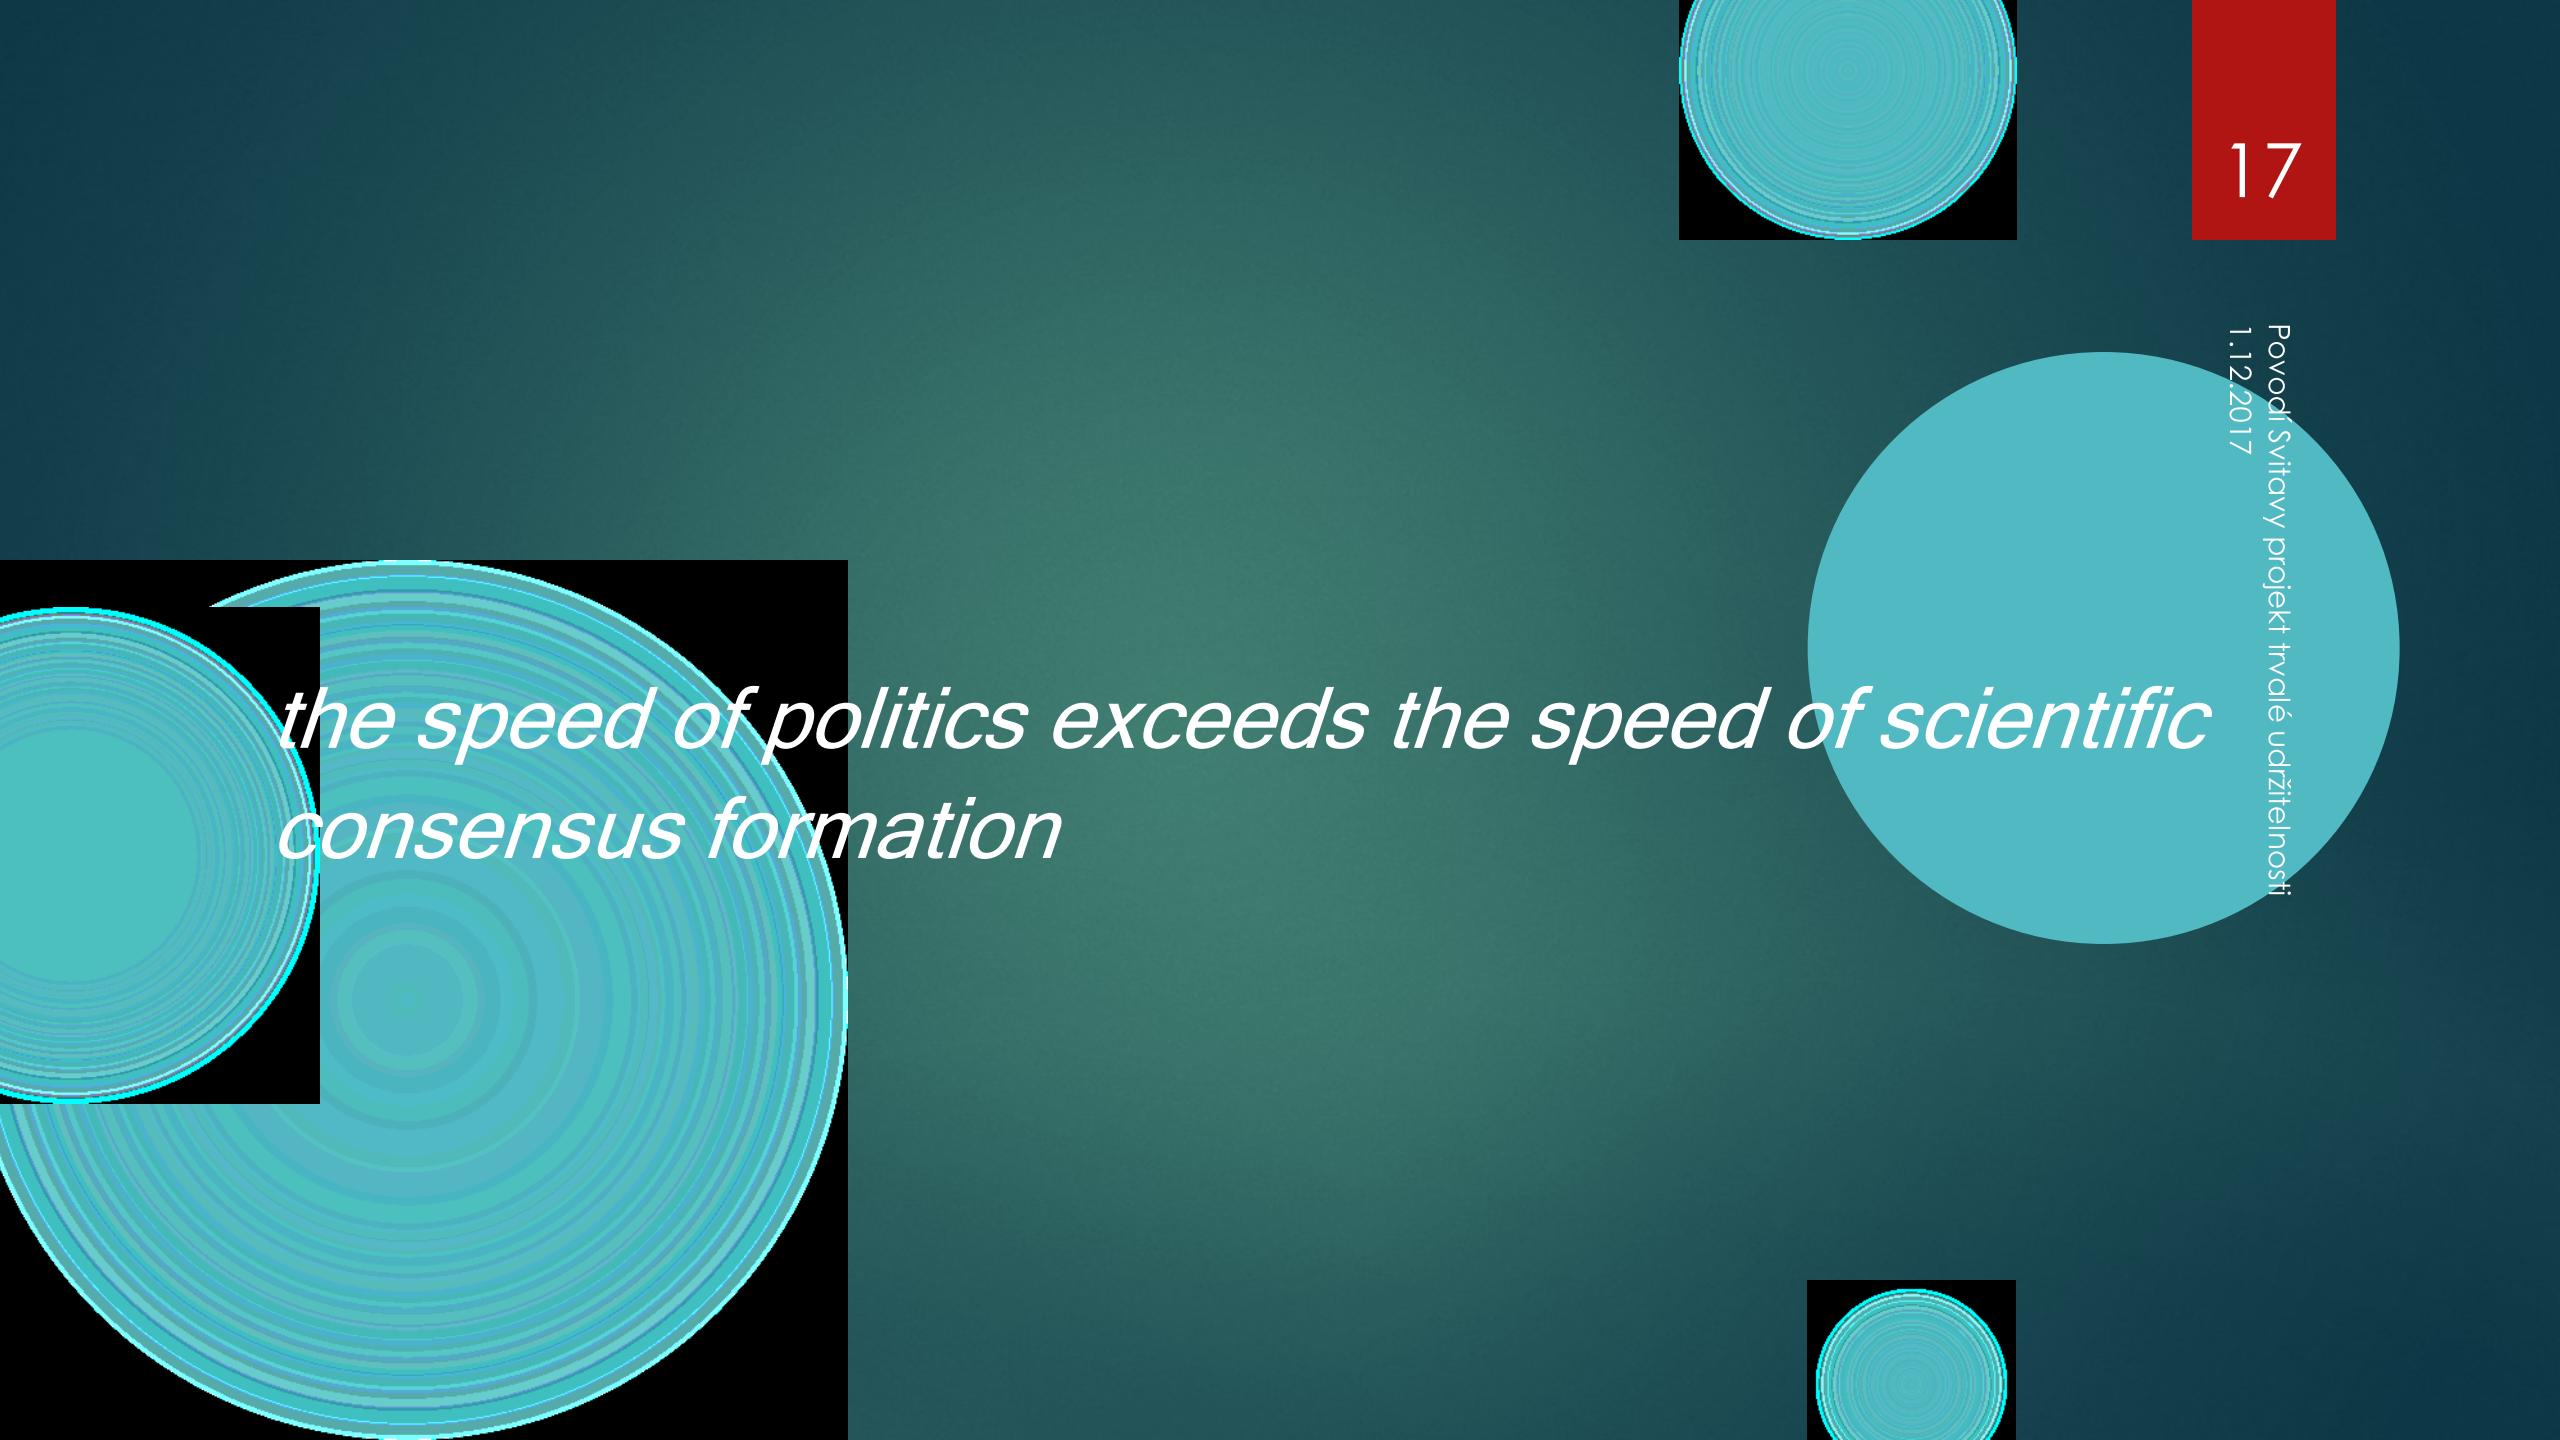

The puzzle is also found well outside the sphere of science and technology.

What should be the relationship of anthropologists to native peoples and of colonialists to the people of the countries they colonize?

How well do you need to understand the people to know what is best for them?

We are talking only about technical expertises. Political choice⁶ is a domain which we do not consider to be technical. Failing to maintain a distinction between science and technology, on the one hand, and politics on the other.

Democracy cannot dominate every domain—that would destroy expertise—and expertise cannot dominate every domain—that would destroy democracy.

*the speed of politics exceeds the speed of scientific
consensus formation*

Geografická expertíza:

Povodí Svratky projekt trvalé udržitelnosti
1.12.2017

- ▶ Znalosti z fyzické, humánní a regionální geografie
- ▶ Dovednosti z kartografie, geoinformatiky
- ▶ Matice dekódování venkovské udržitelnosti v módu foucaultovského dispozitivu (Hynek 2013) aneb tematizace trvalé udržitelnosti (Hynek 2017)
- ▶ Field sustainability
- ▶ Grafika ANT
- ▶ Veřejné podklady

Další postup:

Povodí Svítavy projekt trvalé udržitelnosti
1.12.2017

1. Kompletace podkladů

2. Výběr tématu podle ČR 2030

3. Volba přístupu - LANDEP, ODAPI atd.

4. Řešení

1. Komunikace s aktéry, zahrnutí aktantu(ů)

2. Vlastní zpracování

5. Závěrečná zpráva - návrh změn
