## Solution

Input: 
$$a = [a_1a_0], b = [b_1b_0].$$
  
Output:  $s = [cs_1s_0]; c$ : carry

Using bitwise operations, extract the R, G, B values from a HTML-like specification (in hexa) of the form "#RRGGBB", where each symbol corresponds to a hexa digit. Example, from "#ABCDEF", you should get R="AB", G="CD", B="EF".

## Solution

- let x be the input value (on 24 bits, i.e. 6 bytes)
- R = x >> 16 (right shift by 16 bits)
- $G = (x \ll 4) >> 16$  (left shift followed by right shift)
- B = x&FF (bitwise AND)
- can you see what happened in each case?
- can you find other solutions?
