

This bachelor project deals with complex care for people with autistic spectrum disorders. The first chapter discusses about autism as pervasive developmental disorder, the view of autism in the course of the history and its appearance. The following part is focused on typical autism symptoms and possibilities to correct problem behavior. The second chapter is focusing on TEACCH programme, alternative and augmentative communication, the Picture Exchange Communication System(PECS) and GFCF diet(gluten free, casein free diet). The last part is devoted to the influence each of them. The bachelor project should show influence of complex care for people with autistic spectrum disorder.
