

9b	Work paper Topic: Landscape and cars Activity: Dying of animals on roads and railways
Theoretical base:	The mortality of animals on roads and railways is a common phenomenon. It leads to reducing the species diversity (biodiversity) and making the ecosystems poorer. Their function gets worse. Also, protected species disappear.
Task(s):	1. Why is the biodiversity important for the function of ecosystem? 2. What killed animals on the road have you seen? 3. What has the segmentation of the landscape by roads caused to animals? 4. Try to find a solution to prevent this phenomenon.
New vocabulary:
