SFX server

SFX target
(eg. ProQuest)

The diagram illustrates the SFX (Special Effects) workflow. It starts with a search in a resource like Web of Science, which identifies a relevant article. The SFX server then provides links to the full-text version of this article, such as 'Full text available via EBSCOhost Academic Search Complete' and 'Full text available via ProQuest Central New Platform'. These links lead to the SFX target, which is ProQuest, where the full article is displayed. The article title is 'In vitro reprogramming of fibroblasts into a pluripotent ES-cell-like state' by Marius Wernig et al., published in Nature.
